

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. ## P R E F A C E .

WHILE revising a chronological manual, in compiling which I had, at the age of fifteen,\* employed many midnight hours, I have found material assistance in the tables prepared by my late friend, D. A. Talboys, publisher, of Oxford, England, usually called the Oxford Chronological Tables. In the alphabetical part of the volume, the Comprehensive and useful Dictionary of Dates, by Haydn,† has been incorporated almost entire, with such additions relating to the United States as were necessary to its completeness, and with continuations to the present year.

The contemporary tables which I had formerly prepared, had cost much diligent application, and I was glad to find on collating them with the more recent works, that some slight additions only were needed to make them as full and complete as was desirable for the purpose in view, viz. : a convenient and portable volume for reference, not over-burdened with details, but indicating to the intelligent reader all the great landmarks of history in their order of succession ; and showing also what was going on at the same time in different countries. To render this glance more comprehensive and clear, many of the *details* in the former tables are now omitted, as they are given more at large in the alphabetical part of the volume.

To a reader of history the utility of such a glance at contemporary persons and events, is too obvious to need illustration : but while the more elaborate and ponderous works of Blair, Talboys, and

---

\* *Chronology*—An Index to Universal History, &c. 12mo. Leavitt, New-York, 1833. The volume has been long out of print.

† Fourth edit. 8vo. Lond., 1847. That work needs no praise here.

others, are available to the historian or the merely literary man, they are usually repulsive to the general reader, for the very reason that they contain *too much* for ordinary purposes; their very elaborateness serves to puzzle and to mystify.

What is here aimed at is simply to indicate, in brief and suggestive terms, the succession of the prominent occurrences and of the governments in the chief nations of the world—enough merely to recall to the reader of history the full pictures of these events, and to enable him to classify them correctly in his memory.

The *alphabetical* part of the volume gives, in most cases, more full and ample references to the same historical facts; but still the whole work is but an index to the sources of knowledge—a Dictionary of Dates. It has been planned so as to facilitate access to the largest amount of useful information in the smallest possible compass.

There are some discrepancies among the authorities, as to names and dates—especially in the Middle Ages—and in some instance the dictionary varies from the tables; but these instances are not numerous or important.

The Biographical List at the close of the volume will contribute, it is presumed, to render the contemporary tables far more variously useful than would be at first supposed. By ascertaining from it the dates of birth and death of any eminent person, the tables will show at a glance what events happened, and what other eminent persons lived during the life-time of that individual.

It would be superfluous to say more by way of explanation. That such a volume can be quite free from imperfections is not to be supposed; but the compiler trusts that it will be found to answer all reasonable expectations, as a compact manual of reference to the World's Progress in Arts, Literature, and Social Life, as well as in Politics and Government.

G. P. P.

## EXPLANATION OF THE CHART OF HISTORY,

*representing, in a Chronological Series, the Rise, Revolutions, and Fall of the principal Empires of the World.*

ON THE PLAN OF DR. J. PRIESTLEY.

It is necessary to notice, that the space allotted to each country is rather according to its relative political importance, than to its geographical extent.

The spaces between the *vertical* lines which cross the chart, represent *time*, viz., each a century or 100 years; those between the *horizontal* lines represent countries, the names of which are pressed at the end of the chart.

By examining the vertical columns, we ascertain the contemporary state of different nations at a period we fix upon. For instance: about 1500 years before Christ, we see states forming inreece; the Israelites in Egypt (from whence they depart nine years after); the Egyptian, Assyrian, Persian, Chinese, and other kingdoms had been founded several centuries previous—but their story uncertain and obscure. At the time of Christ, we find the Roman Empire spread over a greater part of the then known world, but the Parthians, Britons, and Germans, as yet unsubdued to them. 700 years after, this empire exists only in Turkey, and its former territories are under barbarians: the Heptarchy in England; the Lombards in Italy, the Franks in Gaul; the African provinces, and a large part of Asia under the Saracens. In 1500 we find the Eastern or Greek empire fallen under the Turks; the Tartars powerful in Asia; many of the modern states of Europe founded; America discovered by the Europeans, &c. &c.

On the other hand, the revolutions of each country may be seen in continuation by looking along the chart horizontally: the *Persian* empire is founded in remote antiquity; united with that of the Medes, about 600 B. C.; is extended by Cyrus into Assyria, Asia Minor, and Egypt, 536; falls, turns, under the Macedonians, Parthians, Saracens, Turks, and Tartars, successively.—The *Israelites* in Egypt from 1706 to 1491 B. C.; in Canaan 1451; under the Judges about 1300; under Kings, 1095; Ten Tribes separated, 975; they are conquered, 721, and Judah, 588, by the Assyrians; restored by the Persians, 535; under the Macedonians, 330; restored to independence by the Maccabees, 150; conquered by the Romans, 63; by the Saracens, A. D. 622; afterwards by the crusaders, Mamelukes, and Turks, successively.—*England* subdued by the Romans in the first century; relinquished by them, A. D. 410; subdued by the Saxons, 500; by the Danes, 860; by the Normans (receiving French territories), 1066; united with Ireland, 1170; with Wales, 1280; with Scotland, 1600.—*Italy* in antiquity possessed by several petty tribes; by the Romans from 300—200 B. C. to 480 A. D., then by the Herulii, Ostrogoths, Lombards, and Franks, successively;—in modern times, divided into several small republics and principalities; joined to the French empire about 1800, and now divided chiefly between Austria, the Grand Dukes of Tuscany, Modena, &c., the Pope, and the King of Naples.

“They are rather melancholy reflections which the view of such a chart of history is apt to cite in the minds of persons of feeling and humanity. What a number of revolutions are marked upon it! What torrents of human blood has the restless ambition of mortals shed, and in what complicated distress has the discontent of powerful individuals involved a great part of our species!”—*Priestley*.

# THE WORLD'S PROGRESS.

## PART I.

### TABULAR VIEWS OF UNIVERSAL HISTORY.

ANCIENT CHRONOLOGY—from the Creation to the Birth of Christ—4004 years.

MODERN CHRONOLOGY—from the Birth of Christ to the present time—1850 years.

#### I. ANCIENT CHRONOLOGY.

DIVIDED INTO EIGHT PERIODS.

|                                                            |                   |                                                 |
|------------------------------------------------------------|-------------------|-------------------------------------------------|
|                                                            | B. C.*            |                                                 |
| From the Creation,<br>to the Deluge,                       | 4004<br>2348..... | 1656 years..... <i>The Antediluvian Period.</i> |
| From the Deluge,<br>to the Call of Abraham,                | 2348<br>1921..... | 427 years..... <i>The Dispersion Period.</i>    |
| From the Call of Abraham,<br>to the Exode from Egypt,      | 1921<br>1491..... | 430 years..... <i>The Patriarchal Period.</i>   |
| From the Exode,<br>to the Kingdom of Saul,                 | 1491<br>1095..... | 396 years..... <i>The Theocratic Period.</i>    |
| From Saul,<br>to the Captivity of Israel,                  | 1095<br>588.....  | 507 years..... <i>The Monarchical Period.</i>   |
| From the Captivity,<br>to Alexander the Great,             | 588<br>330.....   | 258 years..... <i>The Persian Period.</i>       |
| From Alexander,<br>to the Subjugation of Greece,           | 330<br>146.....   | 184 years..... <i>The Grecian Period.</i>       |
| From the Subjugation of Greece,<br>to the Birth of Christ, | 146<br>0.....     | 146 years..... <i>The Roman Period.</i>         |

From the Creation to the Christian era, the dates are reckoned B. C.—  
BEFORE CHRIST. They are then changed to A. D.—the Year of our Lord.

FIRST PERIOD—(*the Antediluvian*)—1656 years.

|     |                                                                                        |                                                                                                                    |        |                                                                                                                         |
|-----|----------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|--------|-------------------------------------------------------------------------------------------------------------------------|
| 104 | THE CREATION OF THE WORLD.—( <i>Hebrew Pentateuch.</i> ) [Hales places it 5411 B. C.*] |                                                                                                                    |        |                                                                                                                         |
|     | The fall of man, and the promise of a Saviour.                                         |                                                                                                                    |        |                                                                                                                         |
|     | The birth of Cain, the first-born of woman—a husbandman.                               |                                                                                                                    |        |                                                                                                                         |
| 75  | The death of Abel, the first subject of death. He was a shepherd.                      |                                                                                                                    |        |                                                                                                                         |
| 74  | Seth born, the third son of Adam.                                                      |                                                                                                                    |        |                                                                                                                         |
| 69  | Enos born.                                                                             |                                                                                                                    |        |                                                                                                                         |
|     |                                                                                        | Enoch born, the first son of Cain.†                                                                                |        |                                                                                                                         |
|     |                                                                                        | Cain builds a city, which he calls Enoch. He introduces the use of weights and measures.— <i>Josephus. Tytler.</i> |        |                                                                                                                         |
| 79  | Cainan born.                                                                           |                                                                                                                    |        |                                                                                                                         |
| 09  | Mahalaleel born.                                                                       |                                                                                                                    |        |                                                                                                                         |

|     |                                                                                        |                                                                                                                    |        | <i>Metals.</i>                                                                                                          |

\* See alphabetical portion of this volume for the various dates of the chronologists. The *Sacred Pentateuch* places the Creation B. C. 4700; the *Septuagint*, 5372; *Josephus*, 4658; the *almudists*, 5344; *Scaliger*, 3950; *Petavius*, 3984; and *Dr. Hales*, 5411. The last named enumerates above 120 various opinions on this subject, the difference between the latest and remotest of which is no less than 3268. The Hebrew account is followed by *Usher*, and is here adopted the most generally received standard.

† No dates are assigned in Scripture to the names here placed in the right-hand column.—They are however contemporary with those in the other column.

REMARKS.—The Antediluvian Period was nearly as long as the whole period that has elapsed since the birth of Christ. Of the progress of knowledge and the arts, during that period, nothing known beyond what is given above, except that ship-building, calking, and the use of pitch, or pitch, of measures by cubit, &c., and of doors and windows, were known. They imply, in their adaptation to the use of man, other arts, and a considerable advance in science and the mechanical powers.

THE TABULAR VIEWS ARE CONTINUED ACROSS TWO PAGES AT THE SAME TIME.

SECOND PERIOD—(*Dispersion of Mankind.*)—

| B.C. |  | PROGRESS OF SOCIETY AND THE ARTS.                                                                                                  | SACRED HISTORY.                                                                                                                       |

| 568  | The old Roman municipal system in Italy overthrown by the invasion of the Lombards—and the feudal system established.                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                |
|      | <i>Written laws</i> compiled among the nations of German origin—first by the Visigoths in Spain.<br><i>Semi-circular arches</i> introduced in the architecture of churches, with much grotesque sculpture.                                                                                                                                                             | 573. Pope Benedict I.<br>575. The first monastery founded in Bavaria. Great increase of <i>miracles</i> .<br>578. Pope Pelagius II.                                                                                                                                                            |
| 580  | The Latin language ceases to be spoken in Italy, while it supersedes the Gothic in Spain.                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                |
| 584  | The origin of <i>fiefs</i> .                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                |
| 586  | The Roman Catholic faith established in Spain.                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                |
| 588  | <i>Gregory of Tours</i> , the father of French history.                                                                                                                                                                                                                                                                                                                | 590. Pope Gregory I. called The Great.<br>The doctrine of <i>purgatory</i> first taught.— <i>Mass</i> introduced.                                                                                                                                                                              |
| 596  | Bretwalda, king of England, converted to Christianity.                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                |
| 597  | <i>Agathus</i> , a Grecian historian.<br><i>Gildas</i> , the first British historian.<br><i>Evagrias</i> , ecclesiastical historian.— <i>Cassiodorus</i> , the historian of Ravenna, tutor to Theodoric.<br>The Saxons, having conquered England, it relapsed, in a great measure, into the state of barbarism, from which it had been partially raised by the Romans. | 598. <i>St. Augustine</i> , first archbishop of Canterbury, introduces Christianity into Britain.<br>604. Pope Sabianus, or Sabinian.<br>606. Pope Boniface III. made supreme head of the church by Phocas.—The title of Universal Bishop assumed.<br>The Waldenses refuse submission to Rome. |

| A.D.    | EASTERN EMPIRE.                                                                                                                                              | EUROPE, GENERALLY.                                                                                                                              |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 540     | Vitiges at Ravenna. — North Africa, Corsica and Sardinia, annexed to the Eastern empire.                                                                     | 539. Italy: War, famine, and pestilence. The City of Milan ravaged by the Goths.                                                                |
| 542     | Plague at Constantinople — during three months from 5,000 to 10,000 die daily.                                                                               | 542. Britain:—Prince Arthur murdered in Cornwall.                                                                                               |
| 548     | The Lombards settle in Pannonia. — The Turkish monarchy founded in Asia.                                                                                     |                                                                                                                                                 |
| 549     | Siege of Petra.                                                                                                                                              | 550. POLAND a dukedom—Lech, its first duke and legislator. His brother, Zech, first duke of Bohemia.                                            |
| 552     | Narses defeats and kills Totila.                                                                                                                             | The Greeks form settlements on the Spanish coast, from the Suraits to Valencia.                                                                 |
| 554     | Italy governed by Greek exarchs.                                                                                                                             | 556. Civil wars in France.                                                                                                                      |
| 558     | A plague extending over Europe and Asia, and lasting nearly 50 years.                                                                                        | 558. France:—Clotaire I.                                       |
| 559     |                                                                                                                                                              | 559. Britain:—the Saxon Heptarchy commences.                                                                                                    |
| 560     |                                                                                                                                                              | 560. Britain:—the kingdom of Northumbria, formed by the union of Bernicia and Deira. —Ethelbert, king of Kent, subdues most of the Saxon kings. |
| 561     | Belisarius disgraced by Justinian.                                                                                                                           | 561. France:—Charibert I.                                      |
| 562     | “ restored:—he quells a conspiracy.                                                                                                                          |                                                                                                                                                 |
| 563     | Great fire in Constantinople—the city nearly destroyed.                                                                                                      |                                                                                                                                                 |
| 565     | Justinian dies.                                                                                                                                              | 565. Europe ravaged by a pestilence.                                                                                                            |
|         | — Justin II.  —<br>Belisarius dies in prison.                               | 568. Italy conquered by the Lombards, under Alboin. He fixes his capital at Pavia.                                                              |
| 569     | The TURKS first mentioned in history.— They send embassies to Justin, and form an alliance.                                                                  | 571. Britain:—Bretwalda II., king of Wessex.                                                                                                    |
| 574     | Tiberius associated with Justin in the government.                                                                                                           | 575. “ East Anglia formed into a kingdom, and called Angle-land, whence the origin of the name England.                                         |
| 576     | Justin defeats Chosroes, king of Persia.                                                                                                                     |                                                                                                                                                 |
| 578     | — Tiberius II.  —                                                           | 583. Spain:—the Suevi subdued by the Visigoths.                                                                                                 |
| 582     | Maurice, the Cappadocian, king; under his reign the empire extends to the Araxes, and almost to the Caspian Sea.                                             | France:—Clotaire II.                                         |
| 579-580 | The Avars flourish under Baian—invalidate the Eastern empire, and spread over Hungary, Poland, and Prussia.                                                  | 586. Britain:—the kingdom of Mercia founded. Spain:—Reccared, king.                                                                             |

# DICTIONARY OF DATES.

CHIEFLY FROM THAT OF JOSEPH HAYDN ; WITH REVISIONS AND ADDITIONS

**ABBEYS AND MONASTERIES**, were first founded in the third century, near the close of which the sister of St. Anthony is said to have retired to one. An abbey was founded by St. Anthony at Phaim, in Upper Egypt, A. D. 305. The first founded in France was at Poitiers, in 360. The first in Ireland was in the fifth century: see *Clogher, Elphin, Down*. The first in Scotland was in the sixth century: see *Isles*. And the first in Britain was in 560: see *Bangor*. The abbey of Mount Cassino, near Naples, founded by St. Benet in 529, was esteemed the richest in the world, and furnished many thousands of saints to the church. 110 monasteries and priories were suppressed in England by order in council, 2 Henry V. 1414.—*Salmon*. The revenues of 193 abbeys which were dissolved at the Reformation amounted to £2,653,000. These foundations were totally suppressed throughout the realm, 31 Henry VIII. 1539. See *Monasteries*.

**ABDICATION OF KINGS**. They are numerous in ancient history. Those in later times of most remarkable character and greatest political importance, and to which reference may more frequently be made, are the following:—

|                                                                           |                |                                                                                     |                |
|---------------------------------------------------------------------------|----------------|-------------------------------------------------------------------------------------|----------------|
| Of Henry IV. of Germany, . . . . .                                        | 1080           | He again abdicates in favor of the Bonaparte family. See <i>Spain</i> . May 1, 1808 |                |
| Of Stephen II. of Hungary, surnamed <i>Thunder</i> , . . . . .            | 1114           | Of Joseph Bonaparte of Naples, to take the crown of Spain, . . . . .                | June 1, 1808   |
| Of Albert of Saxony, . . . . .                                            | 1142           | Of the same (by flying before the British from Madrid), . . . . .                   | July 29, 1808  |
| Of Lestus V. of Poland, . . . . .                                         | 1200           | Of Louis of Holland, . . . . .                                                      | July 1, 1810   |
| Of Uladislaus III. of Poland, . . . . .                                   | 1206           | Of Jerome of Westphalia, . . . . .                                                  | Oct. 20, 1812  |
| Of Baliol of Scotland, . . . . .                                          | 1306           | Of Napoleon of France, . . . . .                                                    | April 5, 1814  |
| Of Otho of Hungary, . . . . .                                             | 1309           | Of Emanuel of Sardinia, . . . . .                                                   | March 13, 1821 |
| Of Eric IX. of Denmark, . . . . .                                         | 1439           | Of Pedro of Portugal, . . . . .                                                     | May 2, 1836    |
| Of Eric XIII. of Sweden, . . . . .                                        | 1441           | Of Charles X. of France, . . . . .                                                  | Aug. 2, 1830   |
| Of Charles V. Emperor, . . . . .                                          | 1556           | Of Pedro of Brazil, . . . . .                                                       | April 7, 1831  |
| Of Christina of Sweden, . . . . .                                         | 1654           | Of Don Miguel of Portugal (by leaving the kingdom), . . . . .                       | May 26, 1834   |
| Of John Casimir of Poland, . . . . .                                      | 1669           | Of William I. of Holland, . . . . .                                                 | Oct. 8, 1840   |
| Of James II. of England, . . . . .                                        | 1688           | Of Christina of Spain, queen dowager and queen regent, . . . . .                    | Oct. 12, 1840  |
| Of Frederick Augustus II. of Poland, . . . . .                            | 1704           | Of Louis Phillippe of France, Feb. 24, 1848                                         |                |
| Of Philip V. of Spain, . . . . .                                          | 1724           | Of Louis, king of Bavaria, . . . . .                                                | March 22, 1848 |
| Of Victor of Sardinia, . . . . .                                          | 1730           | Of Ferdinand I. emperor of Austria, . . . . .                                       | Dec. 2, 1848   |
| Of Charles of Naples, . . . . .                                           | 1759           | Of Charles Albert, king of Sardinia, . . . . .                                      | Aug. 1849      |
| Of Stanislaus of Poland, . . . . .                                        | 1795           |                                                                                     |                |
| Of Victor of Sardinia, . . . . .                                          | June 4, 1802   |                                                                                     |                |
| Of Francis II. of Germany, who becomes emperor of Austria only, . . . . . | Aug. 11, 1804  |                                                                                     |                |
| Of Charles IV. of Spain, in favor of his son, . . . . .                   | March 19, 1808 |                                                                                     |                |

**ABELARD AND HELOISE**. Their amour, so celebrated for its passion and misfortunes, commenced at Paris, A. D. 1118, when Heloise (a canon's daughter) was under 17 years of age. Abelard, after suffering an ignominious injury, became a monk of the abbey of St. Denis, and died at St. Marcel, of grief which never left his heart, in 1142. Heloise begged his body, and had

it buried in the Paraclete, of which she was abbess, with the view of reposing in death by his side. She was famous for her Latin letters, as well as love, and died in 1163. The ashes of both were carried to the Museum of French Monuments in 1800; and the museum having been subsequently broken up, they were finally removed to the burying-ground of Père La Chaise, in 1817.

**ABORIGINES**, the original inhabitants of Italy; or, as others have it, the nation conducted by Saturn into Latium, founded by Janus, 1450 B. C.—*Univ. History*. Their posterity was called *Latini*, from *Latinus*, one of their kings; and Rome was built in their country. They were called Aborigines, being *absque origine*, the primitive planters here after the flood.—*St. Jerome*. The word signifies *without origin*, or whose *origin is not known*, and is generally applied to any original inhabitants.

**ABOUKIR**, the ancient Canopus, the point of debarkation of the British expedition to Egypt under general Abercromby. Aboukir surrendered to the British, after an obstinate and sanguinary conflict with the French, March 18, 1801. The bay is famous for the defeat of the French fleet by Nelson, August 1, 1798. See *Nile*.

**ABRAHAM, ERA OF**. Used by Eusebius; it began October 1, 2016 B. C. To reduce this era to the Christian, subtract 2015 years and three months.

**ABSTINENCE**. St. Anthony lived to the age of 105, on twelve ounces of bread, and water. James the Hermit lived in the same manner to the age of 104. St. Epiphanius lived thus to 115. Simeon, the Stylite, to 112; and Kentigern, commonly called St. Mungo, lived by similar means to 185 years of age.—*Spottiswood*. A man may live seven, or even eleven, days without meat or drink.—*Pliny Hist. Nat.* lib. ii. Democritus subsisted for forty days by smelling honey and hot bread, 323 B. C.—*Diog. Laert*. A woman of Normandy lived for 18 years without food.—*Petrus de Albano*. Gilbert Jackson of Carse-grange, Scotland, lived three years without sustenance of any kind, 1719. A religious fanatic, who determined upon fasting forty days, died on the sixteenth, 1789.—*Phillips*. A country girl, of Osnabruck, abstained four years from all food and drink, 1799.—*Hufeland's Practical Journal*. Ann Moore, the fasting woman of Tutbury, Staffordshire, supposed to have been an impostor, was said to have lived twenty months without food, Nov. 1808. At Newry, in Ireland, a man named Cavanagh was reported to have lived two years without meat or drink; Aug. 1840; his imposture was afterwards discovered in England, where he was imprisoned as a cheat, Nov. 1841. See instances in *Haller's Elementa Physiologia*; *Cornaro*; *Pricher's Surgical Library*, &c.; and in this volume, see *Fasting*.

**ABSTINENTS**. The abstinents were a sect that wholly abstained from wine, flesh, and marriage; and were a community of harmless and mild ascetics. They appeared in France and Spain in the third century; and some authorities mention such a sect as having been numerous elsewhere in A. D. 170.—*Bossuet*.

**ABYSSINIAN ERA**. This era is reckoned from the period of the Creation, which they place in the 5493d year before our era, on the 29th August, old style; and their dates consequently exceed ours by 5491 years and 125 days. To reduce Abyssinian time to the Julian year, subtract 5492 years and 125 days.

**ACADEMIES**, or societies of learned men to promote literature, sciences, and the arts, are of early date. *Academia* was a shady grove without the walls of Athens (bequeathed to Hecademus for gymnastic exercises), where Plato first taught philosophy, and his followers took the title of Academics 378 B. C.—*Stanley*. Ptolemy Soter is said to have founded an academy at Alexandria, about 314 B. C. Theodosius the Younger and Charlemagne are a<sup>1</sup>

named as founders. Italy has been celebrated for its academies; and Jarckius mentions 550, of which 25 were in the city of Milan. The first philosophical academy in France was established by Père Merseune, in 1135. Academies were introduced into England by Boyle and Hobbes; and the Royal Society of London was formed in 1660. The following are among the principal academies:—

American Academy of Arts and Sciences, 1780.  
 American Philosophical Society, 1769.  
 Ancona, of the *Cagliosi*, 1624.  
 Berlin, Royal Society, 1700; of *Princes*, 1703; *Architecture*, 1799.  
 Bologna, Ecclesiastical, 1637; *Mathematics*, 1690; *Sciences and Arts*, 1712.  
 Brescia, of the *Erranti*, 1626.  
 Brest and Toulon, Military, 1682.  
 Brussels, *Belles-Lettres*, 1773.  
 Caen, *Belles-Lettres*, 1750.  
 Copenhagen, Polite Arts, 1742.  
 Cortona, Antiquities, 1726.  
 Dublin, Arts, 1749; Science and Literature, 1786; Painting, Sculpture, &c., 1823.  
 Erfurt, Saxony, Sciences, 1754.  
 Faenza, the *Philoponi*, 1612.  
 Florence, *Belles-Lettres*, 1272; *Della Crusca*, 1582; Antiquities, 1807.  
 Geneva, Medical, 1715.  
 Genoa, Painting, &c., 1751; Sciences, 1783.  
 Germany, Medical, 1617; Natural History, 1652; Military, 1752.  
 Haarlem, the Sciences, 1760.  
 Lisbon, History, 1720; Sciences, 1779.  
 London: its various Academies are described through the volume.  
 Lyons, Sciences, 1700; had Physic and Mathematics added, 1753.  
 Madrid, the Royal Spanish, 1713; History, 1730; Painting and the Arts, 1753.  
 Mannheim, Sculpture, 1775.  
 Mantua, the *Vigilanti*, Sciences, 1704.

Marseilles, *Belles-Lettres*, 1726.  
 Milan, Architecture, 1380; Sciences, 1719.  
 Munich, Arts and Sciences, 1759.  
 Naples, *Rossana*, 1540; Mathematics, 1560; Sciences, 1696; *Herculaneum*, 1755.  
 New York, Literature and Philosophy, 1814.\*  
 Nismes, Royal Academy, 1682.  
 Padua, for Poetry, 1610; Sciences, 1792.  
 Palermo, Medical, 1645.  
 Paris, *Sorbonne*, 1256; Painting, 1391; Music, 1543; French, 1635; Medals, 1663; Architecture, 1671; Surgery, 1731; Military, 1751; Natural Philosophy, 1796.  
 Parma, the *Innominati*, 1550.  
 Perousa, *Insensati*, 1561; *Filigrati*, 1574.  
 Petersburg, Sciences, 1725; Military, 1732; the School of Arts, 1764.  
 Portsmouth, Naval, 1722; enlarged, 1806.  
 Rome, *Umoristi*, 1611; *Fantascici*, 1625; *Infecondi*, 1653; Painting, 1665; *Arcadi*, 1690; English, 1752.  
 Spain, Royal, 1713; Military, 1751.  
 Stockholm, of Science, 1741; *Belles-Lettres*, 1753; Agriculture, 1781.  
 Toulon, Military, 1682.  
 Turin, Sciences, 1759; Fine Arts, 1778.  
 Turkey, Military School, 1775.  
 Upsal, Royal Society, Sciences, 1720.  
 Venice, Medical, &c., 1701.  
 Verona, Music, 1543; Sciences, 1780.  
 Vienna, Sculpture and the Arts, 1705; Surgery, 1783; Oriental, 1810.  
 Warsaw, Languages and History, 1753.  
 Woolwich, Military, 1741.

**ACCENTS.** The most ancient manuscripts are written without accents, and without any separation of words; nor was it until after the ninth century that the copyists began to leave spaces between the words. Michaelis, after Wetstein, ascribes the insertion of accents to Euthalius, bishop of Sulca, in Egypt, A. D. 458; but his invention was followed up and improved upon by other grammarians in the various languages.

**ACHAIA.** This country was governed by a race of kings, but even their names are all forgotten. The capital, Achaia, was founded by Achæus, the son of Xuthus, 1080 B. C. The kingdom was united with Sicyon or subject to the Ætolians until about 284 B. C. The Achæi were descendants of Achæus, and originally inhabited the neighborhood of Argos; but when the Heracidae drove them thence, they retired among the Ionians, expelled the natives, and seized their thirteen cities, viz. Peleni, Ægira, Ægeum, Bura, Tritæa, Leontium, Rhyphæ, Ceraunia, Olenos, Helice, Patræ, Dymæ, and Pharæ.

The Achæan league, . . . . . B. C. 281  
 Fortress of Athenæum built, . . . . . 228  
 Defeat of the Achæans by the Spartans, . . . . . 226  
 and Lysideis killed, . . . . . 222  
 Battle of Sallacia, . . . . . 220  
 The Social war begun, . . . . . 219  
 The Peloponnesus ravaged by the Ætolians, . . . . . 215  
 Aratus poisoned at Ægium, . . . . . 215  
 Battle of Mantinea; Philopœmen defeats the Spartan tyrant Mechanidas, . . . . . 208

Alliance with the Romans, . . . . . B. C. 201  
 Philopœmen defeated by Nabis, in a naval battle, . . . . . 194  
 Sparta joined to the league, . . . . . 191  
 The Achæans overrun Messenia with fire and sword, . . . . . 182  
 The Romans enter Achaia, . . . . . 165  
 Metellus enters Greece, . . . . . 147  
 The Achæan league dissolved, . . . . . 146  
 Greece subjected to Rome, and named the province of Achaia, . . . . . 146

\* Now extinct.

The constitution of the United States of America bears some analogy to that of the Achaean league; and the Swiss cantons also had a great resemblance to it in their confederacy.

**ACOUSTICS.** The doctrine of the different sounds of vibrating strings, and the communication of sounds to the ear by the vibration of the atmosphere, was probably first explained by Pythagoras, about 500 B. C. Mentioned by Aristotle, 330 B. C. The speaking-trumpet is said to have been used by Alexander the Great, 335 B. C. The discoveries of Galileo were made about A. D. 1600. The velocity of sound was investigated by Newton before 1700. Galileo's theorem of the harmonic curve was demonstrated by Dr. Brook Taylor, in 1714; and further perfected by D'Alembert, Euler, Bernoulli, and La Grange, at various periods of the eighteenth century. See *Sound*.

**ACRE, ST. JEAN D'.** Taken by Richard I. and other crusaders in 1192, after a siege of two years, with the loss of 6 archbishops, 12 bishops, 40 earls, 500 barons, and 300 000 soldiers. Retaken by the Saracens, when 60,000 Christians perished, 1291. This capture was rendered memorable by the murder of the nuns, who had mangled their faces to repress the lust of the Infidels. Acre was attacked by Bonaparte in July 1798; and was relieved by Sir Sydney Smith, who gallantly resisted twelve attempts during the memorable siege by the French, between March 6 and May 27, 1799, when, baffled by the British squadron on the water and the Turks on shore, Bonaparte relinquished his object and retreated. St. Jean d'Acre is a pachalic subject to the Porte; seized upon by Ibrahim Pacha, who had revolted, July 2, 1832. It became a point of the Syrian war in 1840. Stormed by the British fleet under Sir Robert Stopford, and taken after a bombardment of a few hours, the Egyptians losing upwards of 2,000 in killed and wounded, and 3,000 prisoners, while the British had but 12 killed and 42 wounded, Nov. 3, 1840. See *Syria* and *Turkey*.

**ACROPOLIS OF ATHENS.** The citadel of Athens was built on a rock, and accessible only on one side: Minerva had a temple at the bottom.—*Paus. i. Attic.* The roof of this vast pile, which had stood 2,000 years, was destroyed in the Venetian siege, A. D. 1687.—*Aspin.* The Acropolis of Mycenæ was marked by terraces, and defended by ponderous walls, on which were high towers, each at the distance of fifty feet.—*Euripides.*

**ACTIUM, BATTLE OF,** between the fleets of Octavianus Cæsar on the one side, and of Marc Antony and Cleopatra on the other; and which decided the fate of Antony, 300 of his galleys going over to Cæsar; fought Sept. 2, 31. This battle made Augustus (the title afterwards conferred by the senate upon Cæsar) master of the world, and the commencement of the Roman empire is commonly dated from this year. In honor of his victory, the conqueror built the city of Nicopolis, and instituted the Actian games.—*Blau.*

**ACTRESSES.** Women in the drama appear to have been unknown to the ancients; men or eunuchs performing the female parts. Charles II. is said to have first encouraged the public appearance of women on the stage in England, in 1662; but the queen of James I. had previously performed in a theatre at court.—*Theat. Biog.*

**ACTS OF PARLIAMENT.** The first promulgated, 16 John, 1215. See *Parliament.* For a great period of years the number of acts passed has been annually large, although varying considerably in every session. Between the 4th and 10th of George IV. 1126 acts were wholly repealed, and 45 repealed in part, chiefly arising out of the consolidation of the laws by M. Peel (afterwards Sir Robert): of these acts, 1344 related to the kingdom of large and 225 to Ireland solely.

**ADAMITES,** a sect that imitated Adam's nakedness before the fall, arose

130. They assembled quite naked in their places of worship, asserting that if Adam had not sinned, there would have been no marriages. Their chief was named Prodicus; they defied the elements, rejected prayer, and said it was not necessary to confess Christ.—*Eusebius*. This sect, with an addition of many blasphemies, and teaching from the text "increase and multiply," was renewed at Antwerp in the thirteenth century, under a chief named Tandeme, who, being followed by 3,000 soldiers, violated females of every age, calling their crimes by spiritual names. A Flandrian, named Picard, again revived this sect in Bohemia, in the fifteenth century, whence they spread into Poland and existed some time.—*Bayle; Pardon*.

ADMINISTRATIONS. Successive administrations of the United States, since the formation of the government:—

FIRST ADMINISTRATION;—1789 to 1797;—8 years.

|                     |                |                |                              |
|---------------------|----------------|----------------|------------------------------|
| George Washington,  | Virginia,      | April 30, 1789 | President.                   |
| John Adams,         | Massachusetts, | do. 1789       | Vice President.              |
| <i>Appointed.</i>   |                |                |                              |
| Thomas Jefferson,   | Virginia,      | Sept. 26, 1789 | Secretaries of State.        |
| Edmund Randolph,    | do.            | Jan. 2, 1794   |                              |
| Timothy Pickering,  | Pennsylvania,  | Dec. 10, 1795  |                              |
| Alexander Hamilton, | New York,      | Sept. 11, 1789 | Secretaries of the Treasury. |
| Oliver Wolcott,     | Connecticut,   | Feb. 3, 1795   |                              |
| Henry Knox,         | Massachusetts, | Sept. 12, 1789 | Secretaries of War.          |
| Timothy Pickering,  | Pennsylvania,  | Jan. 2, 1795   |                              |
| James M'Henry,      | Maryland,      | Jan. 27, 1796  |                              |
| Samuel Osgood,      | Massachusetts, | Sept. 26, 1789 | Post Masters Gen.            |
| Timothy Pickering,  | Pennsylvania,  | Nov. 7, 1791   |                              |
| Joseph Habersham,   | Georgia,       | Feb. 25, 1795  |                              |
| Edmund Randolph,    | Virginia,      | Sept. 26, 1789 | Attorneys General.           |
| William Bradford,   | Pennsylvania,  | Jan. 27, 1794  |                              |
| Charles Lee,        | Virginia,      | Dec. 10, 1795  |                              |

*Speakers of the House of Representatives.*

|                          |               |               |       |
|--------------------------|---------------|---------------|-------|
| Frederick A. Muhlenberg, | Pennsylvania, | 1st Congress, | 1789. |
| Jonathan Trumbull,       | Connecticut,  | 2d do.        | 1791. |
| Frederick A. Muhlenberg, | Pennsylvania, | 3d do.        | 1793. |
| Jonathan Dayton,         | New Jersey,   | 4th do.       | 1795. |

SECOND ADMINISTRATION;—1797 to 1801;—4 years.

|                    |                                      |               |                              |
|--------------------|--------------------------------------|---------------|------------------------------|
| John Adams,        | Massachusetts,                       | March 4, 1797 | President.                   |
| Thomas Jefferson,  | Virginia,                            | 1797          | Vice President.              |
| Appointed.         |                                      |               |                              |
| Timothy Pickering, | Pennsylvania, (continued in office.) | May 13, 1800  | Secretaries of State.        |
| John Marshall,     | Virginia,                            |               |                              |
| Oliver Wolcott,    | Connecticut, (continued in office.)  | Dec. 31, 1800 | Secretaries of the Treasury. |
| Samuel Dexter,     | Massachusetts,                       |               |                              |
| James M'Henry,     | Maryland, (continued in office.)     | May 13, 1800  | Secretaries of War.          |
| Samuel Dexter,     | Massachusetts,                       |               |                              |
| Roger Griswold,    | Connecticut,                         | Feb. 3, 1801  | Secretaries of the Navy.     |
| George Cabot,      | Massachusetts,                       | May 3, 1798   |                              |
| Benjamin Stoddart, | Maryland,                            | May 21, 1798  |                              |
| Joseph Habersham,  | Georgia, (continued in office.)      | May 21, 1798  |                              |
| Charles Lee,       | Virginia, (continued in office.)     |               |                              |

*Speakers of the House of Representatives.*

|                    |                |               |       |
|--------------------|----------------|---------------|-------|
| Jonathan Dayton,   | New Jersey,    | 5th Congress, | 1797. |
| Theodore Sedgwick, | Massachusetts, | 6th do.       | 1799. |

THIRD ADMINISTRATION;—1801 to 1809;—8 years.

|                   |                              |               |                                                       |
|-------------------|------------------------------|---------------|-------------------------------------------------------|
| Thomas Jefferson, | Virginia,                    | March 4, 1801 | } President.<br>Vice Presidents.                      |
| Aaron Burr,       | New York,                    | do. 1801      |                                                       |
| George Clinton,   | New York,                    | do. 1805      |                                                       |
| Appointed.        |                              |               |                                                       |
| James Madison,    | Virginia,                    | March 5, 1801 | } Secretary of State.<br>Secretaries of the Treasury. |
| Samuel Dexter,    | Mass. (continued in office.) |               |                                                       |
| Albert Gallatin,  | Pennsylvania,                | Jan. 26, 1802 |                                                       |

\* *Mr. Cabot* declined the appointment. The *Navy Department* was established in 1798.

|                    |                                          |               |                    |

 Sir Robert Peel, duke of Wellington, earl of Aberdeen, earl of Haddington, earl of Ripon, lord Stanley, Mr. Goulburn, &c. Aug. 7, 1841  
 Lord John Russell's administration July 6, 1846

ADMIRAL. The first so called in England was Richard de Lucy, appointed by Henry III. 1223. Alfred, Athelstan, Edgar, Harold, and other kings, had been previously the commanders of their own fleets. The first was appointed in France, in 1284. The rank of admiral of the English seas was one of great distinction, and was first given to William de Leybourne by Edward I. in 1297.—*Spelman; Rymer*.

ADMIRAL LORD HIGH, OF ENGLAND. The first officer of this rank was created by Richard II. in December 1385; there had been previously high admirals of *districts*—the north, west, and south. See *Navy*.

ADMIRALTY, COURT OF, erected by Edward III. in 1357. This is a civil court for the trial of causes relating to maritime affairs.

ADRIANOPLE, BATTLE OF, which got Constantine the empire, was fought July 3, A.D. 323. Adrianople was taken by the Ottomans from the Greeks in 1369; and it continued to be the seat of the Turkish empire till the capture of Constantinople in 1453. Mahomet II., one of the most distinguished of the sultans, and the one who took Constantinople, was born here in 1430.—

*Priestley.* Adrianople was taken by the Russians, Aug. 20, 1829; but was restored to the sultan at the close of the war, Sept. 14, same year. See *Turkey*.

**ADRIATIC.** The ceremony of the doge of Venice wedding the Adriatic Sea was instituted in A.D. 1173. Annually, upon Ascension-day, the doge married the *Adriaticum Mare*, by dropping a ring into it from his bucentaur, or state barge, and was attended on these occasions by all the nobility of the state, and foreign ambassadors, in gondolas. This ceremony was intermitted, for the first time for centuries, in 1797.

**ADULTERY, ANCIENT LAWS AGAINST IT.** Punished by the law of Moses with the death of both the guilty man and woman.—*Leviticus* xx. 10. This law was repealed, first, because the crime had become common; and secondly, because God's name should not be liable to be too often erased by the ordeal of the waters of bitterness. Leo, of Modena, says that the husband was obliged to dismiss his wife for ever, whether he willed it or not.—*Calmet.* Lycurgus punished the offender as he did a parricide, and the Locrians and Spartans tore out the offenders' eyes. The Romans had no formal law against adultery; the emperor Augustus was the first to introduce a positive law to punish it, and he had the misfortune to see it executed in the persons of his own children.—*Lenglet.* Socrates relates that women who were guilty of adultery were punished by the horrible sentence of public constupration. In England the legal redress against the male offender has been refined into a civil action for a money compensation.—*Lord Mansfield.*

**ADULTERY, ENGLISH LAWS AGAINST IT.** The early Saxons burnt the adulteress, and erected a gibbet over her ashes, whereon they hanged the adulterer.—*Pardon.* King Edmund punished the crime as homicide. It was punished by cutting off the hair, stripping the female offender naked, and whipping her through the streets, if the husband so demanded it to be done, without distinction of rank, during the Saxon Heptarchy, A.D. 457 to 828.—*Stowe.* The ears and nose were cut off under Canute, 1031. Ordained to be punished capitally, together with incest, under Cromwell, May 14, 1659; but there is no record of this law taking effect. In New England a law was ordained whereby adultery was made capital to both parties, even though the man were unmarried, and several suffered under it, 1662.—*Hardie.* At present this offence is more favorably viewed; to divorce and strip the adulteress of her dower, is all her punishment among us; but in Romish countries they usually shut up the adulteress in a nunnery.—*Ashe.*

**ADVENT.** In the calendar it signifies, properly, the approach of the feast of the Nativity; it includes four Sundays, the first of which is always the nearest Sunday to Saint Andrew (the 30th November), before or after. Advent was instituted by the council of Tours, in the sixth century.

**ADVENTURERS, MERCHANT,** a celebrated and enterprising company of merchants, was originally formed for the discovery of territories, extension of commerce, and promotion of trade, by John duke of Brabant, in 1296. This ancient company was afterwards translated into England, in the reign of Edward III., and queen Elizabeth formed it into an English corporation in 1564.—*Anderson.*

**ADVERTISEMENTS IN NEWSPAPERS.** In England, as now published, they were not general until the beginning of the eighteenth century. A penalty of 50*l.* was inflicted on persons advertising a reward with "No questions to be asked" for the return of things stolen, and on the printer, 25 Geo. II. 1754.—*Statutes.* The advertisement duty was formerly charged according to the number of lines; it was afterwards fixed, in England at 3*s.* 6*d.*, and in Ireland at 2*s.* 6*d.* each advertisement. The duty was further reduced, in England to 1*s.* 6*d.*, and in Ireland to 1*s.* each, by statute 3 and 4 Will. IV. 1833.

**ÆDILES**, magistrates of Rome, first created 492 B.C. There were three degrees of these officers, and the functions of the principal were similar to our justices of the peace. The plebeian ædiles presided over the more minute affairs of the state, good order, and the reparation of the streets. They procured all the provisions of the city, and executed the decrees of the people.—*Varro*.

**ÆNIGMA**. The origin of the ænigma is doubtful: Gale thinks that the Jews borrowed their ænigmatical forms of speech from the Egyptians. The philosophy of the Druids was altogether ænigmatical. In Nero's time the Romans were often obliged to have recourse to this method of concealing truth under obscure language. The following epitaph on Fair Rosamond is an elegant specimen of the ænigma:—

Hic jacet in tombâ, Rosa mundi, non Rosa munda;  
Non redolet, sed olet, quæ redolere solet.

**ÆOLIAN HARP**. The invention of this instrument is ascribed to Kircher, 1653; but Richardson proves it to have been known at an earlier period than his time.—*Dissertation on the Customs of the East*. There is a Rabbinical story of the aerial harmony of the harp of David, which, when hung up at night, was played upon by the north wind.—*Baruch*.

**ÆERONAUTICS**. To lord Bacon, the prophet of art, as Walpole calls him, has been attributed the first suggestion of the true theory of balloons. The ancient speculations about artificial wings, whereby a man might fly as well as a bird, refuted by Borelli, 1670. Mr. Henry Cavendish ascertained that hydrygen air is at least twelve times lighter than common air, 1777. The true doctrine of æronautics announced in France by the two brothers Montgolfier, 1782.—See *Balloon*.

**ÆSOP'S FABLES**. Written by the celebrated fabulist, the supposed inventor of this species of entertainment and instruction, about 565 B.C. Æsop's Fables are, no doubt, a compilation of all the fables and apologues of wits both before and after his own time, conjointly with his own.—*Phalaris*.

**ÆTOLIA**. This country was named after Ætolus of Elis, who, having accidentally killed a son of Phoroneus, king of Argos, left the Peloponnesus, and settled here. The inhabitants were very little known to the rest of Greece, till after the ruin of Athens and Sparta, when they assumed a consequence in the country as the opposers and rivals of the Achæans, to whom they made themselves formidable as the allies of Rome, and as its enemies. They were conquered by the Romans under Fulvius.

|                                                                                        |          |                                                                                                   |          |
|----------------------------------------------------------------------------------------|----------|---------------------------------------------------------------------------------------------------|----------|
| The Ætolians begin to ravage the Peloponnesus                                          | B.C. 282 | Therma, Xenia, Cyphara, and other cities, and destroy with fire all the country they invade       | B.C. 201 |
| They dispute the passage of the Macedonians at Thermopylæ                              | 223      | They next invite the kings of Macedon, Syria and Sparta, to coalesce with them against the Romans | 195      |
| Acarnania ceded to Philip as the price of peace                                        | 218      | They seize Calchis, Sparta, and Demetrius in Thessaly                                             | 194      |
| Battle of Lamia; the Ætolians, commanded by Pyrrhus, are defeated by Philip of Macedon | 214      | Their defeat near Thermopylæ                                                                      | 193      |

| They put to the sword the people of                                                    |          | Made a province of Rome                                                                           | 146      |

**AFFINITY, DEGREES OF**. Marriage within certain degrees of kindred was prohibited by the laws of almost all nations, and in almost every age. Several degrees were prohibited in scriptural law, as may be seen in *Leviticus*, chap. xviii. In England, a table restricting marriage within certain near degrees was set forth by authority, A.D. 1563. Prohibited marriages were adjudged to be incestuous and unlawful by the ninety-ninth Canon, in 1603. All marriages celebrated within the forbidden degrees of kindred are declared to be absolutely void by statute 5 and 6 Will. IV. 1835.

**AFFIRMATION OF THE QUAKERS.** This was first legally accepted as an oath in England A.D. 1696. The affirmation was altered in 1702, and again altered and modified December 1721.

**AFGHANISTAN.** Insurrection of the Afghans against the British power in India, January 5, 1842.—See *India*.

**AFRICA**, called *Libya* by the Greeks, one of the three parts of the ancient world, and the greatest peninsula of the universe, first peopled by Ham. It was conquered by Belisarius in A.D. 553 *et seq.* In the seventh century, about 637, the Mahometan Arabs subdued the north of Africa; and their descendants, under the name of Moors, constitute a great part of the present population. See the several countries of Africa through the volume. Among the late distinguished travellers in this quarter of the world, may be mentioned Bruce, who commenced his travels in 1768; Mungo Park, who made his first voyage to Africa, May 22, 1795; and his second voyage, January 30, 1804, but from which he never returned. See *Park*. Richard Lander died of shot-wounds (which he had received when ascending the river Nunn) at Fernando Po, Jan. 31, 1834. The African expedition, for which parliament voted 61,000*l.*, consisting of the *Albert*, *Wilberforce*, and *Soudan* steam-ships, sailed in the summer of 1841. The vessels commenced the ascent of the Niger, Aug. 20; but when they reached Iddah, fever broke out among the crews, and they were successively obliged to return, the *Albert* having ascended the river to Egga, 320 miles from the sea, Sept. 28. The expedition was, in the end, wholly relinquished owing to disease, heat, and hardships, Oct. 17.

**AFRICAN COMPANY**, a society of merchants trading to Africa. An association in Exeter, which was formed in 1588, gave rise to this company. A charter was granted to a joint stock company in 1618: a third company was created in 1631; a fourth corporation in 1662; and another formed by letters patent in 1672, and remodelled in 1695. The rights vested in the present company, 23 Geo. II. 1749. See *Slave Trade*.

**AGE:** GOLDEN AGE, MIDDLE AGE, &c. Among the ancient poets, an age was the space of thirty years, in which sense age amounts to much the same as generation. The interval since the first formation of man has been divided into four ages, distinguished as the golden, silver, brazen, and iron ages; but a late author, reflecting on the barbarism of the first ages, will have the order assigned by the poets inverted—the first, being a time of ignorance, would be more properly denominated an iron, rather than a golden age. Various divisions of the duration of the world have been made by historians: by some the space of time commencing from Constantine, and ending with the taking of Constantinople by the Turks, in the fifteenth century, is called the middle age; the middle is also styled the barbarous age. The ages of the world may be reduced to three grand epochs, viz., the age of the law of nature, from Adam to Moses; the age of the Jewish law, from Moses to Christ; and the age of grace, from Christ to the present year.

**AGINCOURT, BATTLE OF**, between the French and English armies, gained by Henry V. Of the French, there were 10,000 killed, and 14,000 were taken prisoners, the English losing only 100 men. Among the prisoners were the dukes of Orleans and Bourbon, and 7000 barons, knights, and gentlemen, and men more numerous than the British themselves. Among the slain were the dukes of Alençon, Brabant, and Bar, the archbishop of Sens, one marshal, thirteen earls, ninety-two barons, and 1500 knights, Oct. 25, 1415.—*Goldsmith*.

**AGRA, FORTRESS OF**, termed the key of Hindostan, surrendered, in the war with the Mahrattas, to the British forces, Oct. 17, 1803. This was once the

most splendid of all the Indian cities, and now exhibits the most magnificent ruins. In the 17th century the great mogul frequently resided here; his palaces, and those of the Omrahs, were very numerous; Agra then contained above 60 caravansaries, 800 baths, and 700 mosques. See *Mausoleums*.

**AGRARIAN LAW**, *Agraria Lex*. This was an equal division among the Roman people of all the lands which they acquired by conquest, limiting the acres which each person should enjoy, first proposed by Sp. Cassius, to gain the favor of the citizens, 486 B.C. It was enacted under the tribune Tiberius Gracchus, 132 B.C.; but this law at last proved fatal to the freedom of Rome under Julius Cæsar.—*Livy; Vossius*.

**AGRICULTURE**. The science of agriculture may be traced to the period immediately succeeding the Deluge. In China and the eastern countries it was, perhaps, coeval with their early plantation and government. Of the agriculture of the ancients little is known. The Athenians pretended that it was among them the art of sowing corn began; and the Cretans, Sicilians, and Egyptians lay claim, the last with most probability, to the honor. Brought into England by the Romans, as a science, about A.D. 27.

**AGYNNIANS**. This sect arose about A.D. 694, and alleged that God forbade the eating of flesh, assuming the first chapter of Genesis to be the authority upon which the doctrine was founded. A revival of this ancient sect now flourishes at Manchester and other towns in England, and has been public there since 1814.

**AIR**. Anaximenes of Miletus declared air to be a self-existent deity, and the first cause of every thing created, 530 B.C. The pressure of air was discovered by Torricelli, A.D. 1645. It was found to vary with the height by Pascal, in 1647. Halley, Newton, and others, up to the present time, have illustrated the agency and influences of this great power by various experiments, and numerous inventions have followed from them; among others, the air-gun by Guter of Nuremburg in 1656; the air-pump, invented by Otho Guericke at Magdeburg in 1650, and improved by the illustrious Boyle in 1657; and the air-pipe, invented by Mr. Sutton, a brewer of London, about 1756. See *Balloon*.

**AIX-LA-CHAPELLE, PEACE OF**. The first treaty of peace signed here was between France and Spain, when France yielded Franche-Comté, but retained her conquests in the Netherlands, May 2, 1668. The second, or celebrated treaty, was between Great Britain, France, Holland, Hungary, Spain, and Genoa. By this memorable peace the treaties of Westphalia in 1648, of Nimeguen in 1678 and 1679, of Ryswick in 1697, of Utrecht in 1713, of Baden in 1714, of the Triple Alliance 1717, of the Quadruple Alliance in 1718, and of Vienna in 1738, were renewed and confirmed. Signed on the part of England by John Earl of Sandwich, and Sir Thomas Robinson, Oct. 7, 1748. A congress of the sovereigns of Austria, Russia, and Prussia, assisted by ministers from England and France, was held at Aix-la-Chapelle, and a convention signed, October 9, 1818. The sum then due from France to the allies was settled at 265,000,000 francs.

**ALABAMA**. One of the United States; most of its territory was included in the original patent of Georgia. It was made a part of the Mississippi territory in 1817; admitted into the Union as a State in 1820. Population in 1810 was less than 10,000; in 1816, 29,683; in 1820, 127,901; in 1830, 308,997; in 1840, 590,756, including 253,532 slaves. Exports of the State in 1840 amounted to \$12,854,694; imports, to \$574,651.

**ALBA**. Founded by Ascanius, 1152 B.C., and called *Longa*, because the city extended along the hill *Albanus*. This kingdom lasted 487 years, and was

governed by a race of kings, the descendants of Æneas. When Amulius dethroned his brother, he condemned Ilia, the daughter of Numitor, to a life of celibacy, by obliging her to take the vows and office of a vestal, thereby to assure his safety in the usurpation. His object was, however, frustrated; violence was offered to Ilia, and she became the mother of twins, for which Amulius ordered her to be buried alive, and her offspring to be thrown into the Tiber, 770 B.C. But the little bark in which the infants were sent adrift stopped near Mount Aventine, and was brought ashore by Faustulus, the king's chief shepherd, who reared the children as his own, and called them Romulus and Remus. His wife, Acca-Laurentia, was surnamed *Lupa*; whence arose the fable that Romulus and his brother were suckled by a she-wolf. At sixteen years of age, Romulus avenged the wrongs of Ilia and Numitor, 754 B.C., and the next year founded Rome.—*Varro*.

**ALBAN'S, ST.** The name of this town was anciently Verulam; it was once the capital of Britain, and previously to the invasion of Julius Cæsar was the residence of British princes. It takes its present name from St. Alban, who was born here, and who is said to have been the first person who suffered martyrdom for Christianity in Britain. He is hence commonly styled the proto-martyr of this country, and was decapitated during the persecution raised by Diocletian, June 23, A.D. 286. A stately monastery was erected here to his memory by Offa, king of Mercia, in 793. St. Alban's was incorporated by Edward VI. 1552.

**ALBAN'S, ST., BATTLES OF.** The first, between the houses of York and Lancaster, in which Richard duke of York obtained a victory over Henry VI., of whose army 5000 were slain, while that of the duke of York suffered no material loss, fought May 22, 1455. The second, between the Yorkists under the earl of Warwick, and the Lancastrians, commanded by queen Margaret of Anjou, who conquered: in this battle 2500 of the defeated army perished; fought on Shrove Tuesday, February 2, 1461.

**ALBANY,** city, capital of the State of New-York, founded by the Dutch in 1623, and by them named Beaverwyck; capitulated to the English in 1664, and then received its present name in honor of the Duke of York and Albany, its proprietor. Incorporated in 1686. Population in 1810, 9,356: in 1830, 24,238; in 1840, 33,721.

**ALBIGENSES.** This sect had its origin about A.D. 1160, at Albigeois, in Languedoc, and at Toulouse; they opposed the disciples of the Church of Rome, and professed a hatred of all the corruptions of that religion. Simon de Montfort commanded against them, and at Beziers he and the pope's legate put friends and foes to the sword. At Minerba, he burnt 150 of the Albigenes alive; and at La Vaur, he hanged the governor, and beheaded the chief people, drowning the governor's wife, and murdering other women. They next defeated the count of Toulouse, with the loss of 17,000 men. Simon de Montfort afterwards came to England. See *Waldenses*.

**ALBION.** The island of Great Britain is said to have been first so called by Julius Cæsar, on account of the chalky cliffs upon its coast, on his invasion of the country, 54 B.C. The Romans conquered it, and held possession about 400 years. On their quitting it, it was successively invaded by the Scots, Picts, and Saxons, who drove the original inhabitants from the plain country, to seek refuge in the steepes and wilds of Cornwall and Wales; the Danes and Normans also settled at various times in England: and from a mixture of these nations the present race of Englishmen is derived. See *Britain*.—New Albion, district of California, was taken possession of by sir Francis Drake, and so named by him, in 1578; explored by Vancouver in 1792.

**ALBUERA, BATTLE OF,** between the French, commanded by marshal Soult,

and the British and Anglo-Spanish army, commanded by marshal, now lord Beresford, May 16, 1811. After an obstinate and sanguinary engagement, the allies obtained the victory, justly esteemed one of the most brilliant achievements of the Peninsular war. The French loss exceeded 9000 men previously to their retreat.

**ALCHEMY.** This was a pretended branch of chemistry, which effected the transmutation of metals into gold, an alkahest, or universal menstruum, a universal ferment, and other things equally ridiculous. If regard may be had to legend and tradition, alchemy must be as old as the Flood: yet few philosophers, poets, or physicians, from Homer till 400 years after Christ, mention any such thing. Pliny says the emperor Caligula was the first who prepared natural arsenic, in order to make gold of it, but left it off because the charge exceeded the profit. Others say the Egyptians had this mystery; which if true, how could it have been lost? The Arabians are said to have invented this mysterious art, wherein they were followed by Ramond Lullius, Paracelsus, and others, who never found any thing else but ashes in their furnaces. Another author on the subject is Zosimus, about A. D. 410.—*Fab. Bib. Gras.* A license for practising alchemy with all kinds of metals and minerals granted to one Richard Carter, 1476.—*Rymer's Fœd.* Doctor Price, of Guildford, published an account of his experiments in this way, and pretended to success: he brought his specimens of gold to the king, affirming that they were made by means of a red and white powder; but being a Fellow of the Royal Society, he was required, upon pain of expulsion, to repeat his experiments before Messrs. Kirwan and Woulfe; but after some equivocation, he took poison and died, August 1783.

**ALCORAN.** The book which contains the revelation and *credenda* of Mahomet: it is confessedly the standard of the Arabic tongue, and as the Mahometans believe, inimitable by any human pen; hence they assume its divine origin. It is the common opinion of writers, that Mahomet was assisted by Batiraz, a Jacobin, Sergius, a Nestorian monk, and by a learned Jew, in composing this book, most of whose principles are the same with those of Arius, Nestorius, Sabellius, and other heresiarchs. The Mahometans say, that God sent it to their prophet by the Angel Gabriel: it was written about A. D. 610.—See *Koran, Mahometism, Mecca, &c.*

**ALDERMEN.** The word is derived from the Saxon *Ealdorman*, a senior, and among the Saxons the rank was conferred upon elderly and sage, as well as distinguished persons, on account of the experience their age had given them. At the time of the Heptarchy, aldermen were the governors of provinces or districts, and are so mentioned up to A. D. 882. After the Danes were settled in England, the title was changed to that of *earl*, and the Normans introduced that of *count*, which though different in its original signification, yet meant the same thing. Henry III. may be said to have given its basis to this city distinction. In modern British polity, and also in the United States, an alderman is a magistrate next in dignity to the mayor.

**ALE AND WINE.** They are said to have been invented by Bacchus; the former where the soil, owing to its quality, would not grow grapes.—*Tooke's Pantheon.* Ale was known as a beverage at least 404 B. C. Herodotus ascribes the first discovery of the art of brewing barley-wine to Isis, the wife of Asyris. The Romans and Germans very early learned the process of preparing a liquor from corn by means of fermentation, from the Egyptians.—*Tacitus.* Alehouses are made mention of in the laws of Ina, king of Wessex. Booths were set up in England A. D. 728, when laws were passed for their regulation. Alehouses were licensed 1621; and excise duty on ale and beer was imposed on a system nearly similar to the present, 13 Charles II., 1660. See *Beer, Wine.*

**ALEMANNI, OR ALL MEN**, (*i. e.* men of all nations,) a body of Suevi, defeated by Caracalla, A. D. 214. On one occasion 300,000 of this warlike people are said to have been vanquished, in a battle near Milan, by Gallienus, at the head of 10,000 Romans. Their battles were numerous with the Romans and Gauls. They ultimately submitted to the Franks.—*Gibbon*.

**ALEXANDER, ERA OF**, dated from the death of Alexander the Great, November 12, 323 B. C. In the computation of this era, the period of the creation was considered to be 5502 years before the birth of Christ, and, in consequence, the year 1 A. D. was equal to 5503. This computation continued to the year 284 A. D., which was called 5786. In the next year (285 A. D.), which should have been 5787, ten years were discarded, and the date became 5777. This is still used in the Abyssinian era, *which see*. The date is reduced to the Christian era by subtracting 5502 until the year 5786, and after that time by subtracting 5492.

**ALEXANDRIA, in Egypt**, the walls whereof were six miles in circuit, built by Alexander the Great, 332 B. C.; taken by Cæsar, 47 B. C., and the library of the Ptolemies, containing 400,000 valuable works in MS., burnt. Conquered by the Saracens, when the second library, consisting of 700,000 volumes was totally destroyed by the victors, who heated the water for their baths for six months by burning books instead of wood, by command of the caliph Omar, A. D. 642. This was formerly a place of great trade, all the treasures of the East being deposited here before the discovery of the route by the Cape of Good Hope. Taken by the French under Bonaparte, when a massacre ensued, July 5, 1798; and from them by the British in the memorable battle mentioned in next article, in 1801. Alexandria was again taken by the British, under General Frazer, March 21, 1807; but was evacuated by them, Sept. 23, same year. For late events, see *Syria* and *Turkey*.

**ALEXANDRIA, BATTLE OF**, between the French, under Menou, who made the attack, and the British army, under Sir Ralph Abercrombie, amounting to about 15,000 men, which had but recently debarked, fought March 21, 1801. The British were victorious, but Sir Ralph Abercrombie was mortally wounded.

**ALEXANDRINE VERSE**. Verse of twelve feet, or syllables, first written by Alexander of Paris, and since called, after him, Alexandrines, about A. D. 1164.—*Nowv. Dict.* Pope, in his *Essay on Criticism*, has the following well-known couplet, in which an Alexandrine is happily exemplified:—

"A needless Alexandrine ends the song,  
Tha' like a wound-ed snake, drags its slow length a-long."

**ALGEBRA**. Where algebra was first used, and by whom, is not precisely known. Diophantus first wrote upon it, probably about A. D. 170; he is said to be the inventor. Brought into Spain by the Saracens, about 900; and into Italy by Leonardo of Pisa, in 1202. The first writer who used algebraical signs was Stifelius of Nuremberg, in 1544. The introduction of symbols for quantities was by Francis Vieta, in 1590, when algebra came into general use.—*Moreri*. The binomial theorem of Newton, the basis of the doctrine of fluxions, and the new analysis, 1668.

**ALGIERS**. The ancient kingdom of Numidia, reduced to a Roman province, 44 B. C. It afterwards became independent, till, dreading the power of the Spaniards, the nation invited Barbarossa, the pirate, to assist it, and he seized the government, A. D. 1516; but it afterwards fell to the lot of Turkey.—*Priestley*. The Algerines for ages braved the resentment of the most powerful states in Christendom, and the emperor Charles V. lost a fine fleet and army in an unsuccessful expedition against them, in 1541. Algiers was reduced by Admiral Blake, in 1653, and terrified into pacific measures with England; but it repulsed the vigorous attacks of other European powers, particularly those of France, in 1688, and 1761; and of Spain, in 1775,

1783, and 1784. It was bombarded by the British fleet, under lord Exmouth, Aug. 27, 1816, when a new treaty followed, and Christian slavery was abolished. Algiers surrendered to a French armament, under Bournont and Duperré, after some severe conflicts, July 5, 1830, when the dey was deposed, and the barbarian government wholly overthrown. The French ministry announced their intention to retain Algiers, permanently, May 20, 1834. Marshal Clausel defeated the Arabs in two engagements (in one of which the duke of Orleans was wounded), and entered Mascara, Dec. 8, 1836. General Damremont attacked Constantina (*which see*), Oct. 13, 1837; since when various other engagements between the French and the natives, have taken place. Abd-el-Kader surrendered to General Lamoriciere, Dec. 22, 1847. See *Morocco*.

**ALI, SECT OF.** Founded by a famous Mahometan chief, the son-in-law of Mahomet, (having married his daughter Fatima,) about A. D. 632. Ali was called by the Prophet, "the Lion of God, always victorious;" and the Persians follow the interpretation of the Koran according to Ali, while other Mahometans adhere to that of Abubeker and Omar. It is worthy of remark, that the first four successors of Mahomet—Abubeker, Omar, Othman, and Ali, whom he had employed as his chief agents in establishing his religion, and extirpating unbelievers, and whom on that account he styled the "cutting swords of God," all died violent deaths; and that this bloody impostor's family was wholly extirpated within thirty years after his own decease. Ali was assassinated in 660.

**ALIENS.** In England aliens were grievously coerced up to A. D. 1377. When they were to be tried criminally, the juries were to be half foreigners, if they so desired, 1430. They were restrained from exercising any trade or handicraft by retail, 1483.

**ALL SAINTS.** The festival instituted, A. D. 625. All Saints, or All Hallows, in the Protestant church, is a day of general commemoration of all those saints and martyrs in honor of whom, individually, no particular day is assigned. The Church of Rome and the Greek church have saints for every day in the year. The reformers of the English church provided offices only for very remarkable commemorations, and struck out of their calendar altogether a great number of anniversaries, leaving only those which *at their time* were connected with popular feeling or tradition.

**ALLEGORY.** Of very ancient composition. The Bible abounds in the finest instances, of which Blair gives *Psalms* lxxx. ver. 8, 16, as a specimen. Spenser's *Faerie Queene* is an allegory throughout; Addison, in his *Spectator*, abounds in allegories; and the *Pilgrim's Progress* of Bunyan, 1663, is perfect in its way. Milton, among other English poets, is rich in allegory.

**ALMANACS.** The Egyptians computed time by instruments. Log calendars were anciently in use. Al-mon-aght, is of Saxon origin. In the British Museum and universities are curious specimens of early almanacs. Michael Nostrodamus, the celebrated astrologer, wrote an almanac in the style of Merlin, 1566.—*Dufresnoy*. The most noted early almanacs were:

ALMANACS, *continued*.

Of Moore's, at one period, upwards of 500,000 copies were annually sold. The Stationers' company claimed the exclusive right of publishing, until 1790, in virtue of letters patent from James I., granting the privilege to this company, and the two universities. The stamp duty on almanacs was abolished in England, 1834.

ALMEIDA, BATTLE OF, between the British and Anglo-Spanish army, commanded by lord Wellington, and the French army under Massena, who was defeated with considerable loss, August 5, 1811. Wellington compelled Massena to evacuate Portugal, and to retreat rapidly before him; but the route of the French was tracked by the most horrid desolation.

ALPHABET. Athotes, son of Menes, was the author of hieroglyphics, and wrote thus the history of the Egyptians, 2122 B. C.—*Blair*. But Josephus affirms that he had seen inscriptions by Seth, the son of Adam; though this is doubted, and deemed a mistake, or fabulous. The first letter of the Phœnician and Hebrew alphabet was *aleph*, called by the Greeks *alpha*, and abbreviated by the moderns to A. The Hebrew is supposed to be derived from the Phœnician. Cadmus, the founder of Cadmea, 1493 B. C., brought the Phœnician letters (fifteen in number) into Greece; they were the following:—

A, B, Γ, Δ, I, K, Λ, M, N, O, Π, P, Σ, T, Υ.

These letters were originally either Hebrew, Phœnician, or Assyrian characters, and changed gradually in form till they became the ground of the Roman letters, now used all over Europe. Palamedes of Argos invented the double characters, Θ, X, Φ, Ξ, about 1224 B. C.; and Simonides added Ζ, Ψ, Η, Ω, about 489 B. C.—*Arundelian Marbles*. When the Ε was introduced is not precisely known. The Greek alphabet consisted of sixteen letters till 399 B. C., when the Ionic, of 24 characters, was introduced. The small letters are of late invention, for the convenience of writing. The alphabets of the different nations contain the following number of letters:—

|                   |    |                    |    |                   |    |                    |     |

ALPHONSINE TABLES. Celebrated astronomical tables, composed by command, and under the direction of, Alphonsus X. of Castile, surnamed the Wise. This learned prince is said to have expended upwards of 400,000 crowns in completing the work, whose value was enhanced by a preface, written by his own hand: he commenced his reign in 1252.

ALTARS, were first raised to Jupiter, in Greece, by Cecrops, who also instituted and regulated marriages, 1556 B. C. He introduced among the Greeks the worship of those deities which were held in adoration in Egypt.—*Herodotus*. Christian altars in churches were instituted by pope Sixtus I. in 135; and they were first consecrated by pope Sylvester. The first Christian altar in Britain was in 634.—*Stowe*. The Church of England, and all the reformed churches, discontinue the name, and have abolished the doctrine that supported their use.

ALUM, is said to have been first discovered at Roeha, in Syria, about A. D. 1300; it was found in Tuscany, in 1460; was brought to perfection in England, in

1608: was discovered in Ireland, in 1757; and in Anglesey, in 1790. Alum is a salt used as a mordant in tanning; it is used also to harden tallow, and to whiten bread. It may be made of pure clay exposed to vapors of sulphuric acid, and sulphate of potash added to the ley; but it is usually obtained by means of ore called alum slate.

AMAZONIA, discovered by Francisco Orellana, in 1580. Coming from Peru, Orellana sailed down the river Amazon to the Atlantic, and observing companies of women in arms on its banks, he called the country Amazonia, and gave the name of Amazon to the river, which had previously been called Maranon.

AMAZONS. Their origin is fabulous. They are said to have been the descendants of the Scythians inhabiting Cappadocia, where their husbands having made incursions, were all slain, being surprised in ambuscades by their enemies. Their widows, reflecting on the alarms or sorrows they underwent on account of the fate of their husbands, resolved to form a female state, and having firmly established themselves, they decreed that matrimony was a shameful servitude; but, to perpetuate their race, they, at stated times, admitted the embraces of their male neighbors.—*Quintus Curtius*. They were conquered by Theseus, about 1231 B. C. The Amazons were constantly employed in wars; and that they might throw the javelin with more force, their right breasts were burned off, whence their name from the Greek, *non* and *mamma*. Their queen, Thalestris, visited Alexander the Great, while he was pursuing his conquests in Asia, and cohabited with him, in the hope of having issue by so illustrious a warrior; three hundred females were in her train.—*Herodotus*.

AMBASSADORS, accredited agents and representatives from one court to another, are referred to early ages, and to almost all nations. In most countries they have great and peculiar privileges; and in England, among others, they and their servants are secured against arrest. The Portuguese ambassador in England was imprisoned for debt, in 1653; and the Russian, by a lace-merchant, in 1709, when a law, the statute of 8 Anne, passed for their protection. Two men were convicted of arresting the servant of an ambassador. They were sentenced to be conducted to the house of the ambassador, with a label on their breasts, to ask his pardon, and then one of them to be imprisoned three months and the other fined, May 12, 1780.—*Phillips*.

AMBER. Of great repute in the world from the earliest time; esteemed as a medicine before the Christian era: Theophrastus wrote upon it, 300 B. C. Upwards of 150 tons of amber have been found in one year on the sands of the shore near Pillau.—*Phillips*. Much diversity of opinion still prevails among naturalists and chemists respecting the origin of amber, some referring it to the vegetable, others to the mineral, and some to the animal kingdom; its natural history and its chemical analysis affording something in favor of each opinion.

AMEN. This word is as old as the Hebrew itself. In that language it means *true, faithful, certain*. Employed in devotions, at the end of a prayer, it implies, *so be it*; at the termination of a creed, *so it is*. It has been generally used, both in the Jewish and Christian churches, at the conclusion of prayer.

AMENDE HONORABLE, originated in France in the ninth century. It was first an infamous punishment inflicted on traitors and sacrilegious persons: the offender was delivered into the hands of the hangman; his shirt was stripped off, a rope put about his neck, and a taper in his hand; he was then led into court, and was obliged to pray pardon of God, the king, and the country. Death or banishment sometimes followed. *Amende honorable* is now a term used for making recantation in open court, or in the presence of the injured party.

**AMERICA:** See *United States*. Discovered by Christopher Colombo, a Genoese, better known as Christopher Columbus, A.D. 1492, on the 11th of October, on which day he came in sight of St. Salvador. See *Bahama Islands*. This great navigator found the continent of America in 1497, and the eastern coasts were found by Amerigo Vespucci (Americus Vespucius) in 1498; and from this latter discoverer the whole of America is named.

|                                                                                                                                          |      |                                                                                                                  |      |

**AMERICA, SOUTH.** The Spaniards, as being the first discoverers of this vast portion of the Western World, had the largest and richest share of it. When they landed in Peru, A. D. 1530, they found it governed by sovereigns called Incas, who were revered by their subjects as divinities, but they were soon subdued by their invaders under the command of Francis Pizarro. The cruelties practised by the new adventurers wherever they appeared, will be a reproach to Spain for ever.\* Spanish America has successfully asserted its freedom within the present century. It first declared its independence in 1810; and the provinces assembled, and proclaimed the sovereignty of the people in July, 1814; since when, although the wars of rival and contending chiefs have been afflicting the country, it has released itself from the yoke of Spain for ever. Its independence was recognized first by the United States, chiefly through the influence of H. Clay; by England, in 1823, *et seq.*; and by France, Sept. 30, 1830. See *Brazil, Colombia, Lima, Peru, &c.*

**AMERICAN LITERATURE.** The American Almanac for 1840 gives a list of 776 names of American authors who had died previous to that year. This did not include authors of mere pamphlets, which would have swelled the number three-fold; but the "authorship" of many in the list was of very moderate amount or value. Of the 776 names, there were writers on Theology, Sermons, &c., 259; Poetry, 57; History and Biography, 80; Politics and Law, 77. [In these numbers, writers on two or more of the subjects are repeated.]

**AMETHYSTS.** When this stone was first prized is not known; it was the ninth in place upon the breastplate of the Jewish high priests, and the name *Issachar* was engraved upon it. It is of a rich violet color, and according to Plutarch, takes its name from its color, resembling wine mixed with water. One worth 200 rix dollars having been rendered colorless, equalled a diamond in lustre valued at 18,000 gold crowns.—*De Boot Hist. Gemmarum*. Amethysts were discovered at Kerry, in Ireland, in 1755.—*Burns*.

**AMIENS, PEACE OF,** between Great Britain, Holland, France and Spain; the preliminary articles, fifteen in number, were signed by lord Hawkesbury and M. Otto, on the part of England and France, Oct. 1, 1801; and the definitive treaty was subscribed on March 27, 1802, by the marquis Cornwallis for England, Joseph Bonaparte for France, Azara for Spain, and Schimmelpenninck for Holland.

**AMMONITES.** Descended from Ammon, the son of Lot; they invaded the land of Canaan and made the Israelites tributaries, but they were defeated

\* Las Casas, in describing the barbarity of the Spaniards while pursuing their conquests, records many instances of it that fill the mind with horror. In Jamaica, he says, they hanged the unresisting natives by thirteen at a time, in honor of the thirteen apostles! and he has beheld them throw the Indian infants to their dogs for food! "I have heard them," says Las Casas, "borrow the limb of a human being to feed their dogs, and have seen them the next day return a quarter of another victim to the lender!"

by Jephthah, 1188 B. C. They again invaded Canaan in the reign of Saul, with an intention to put out the right eye of all those they subdued, but Saul overthrew them, 1093 B. C. They were afterwards many times vanquished; and Antiochus the Great took Rabboath their capital, and destroyed all the walls, 198 B. C.—*Josephus*.

**AMNESTY.** The word as well as the practice was introduced into Greece by Thrasybulus, the Athenian general and patriot, who commenced the expulsion of the thirty tyrants with the assistance of only thirty of his friends: having succeeded, the only reward he would accept was a crown made with two branches of olive. 409 B. C.—*Hume's Essays*.

**AMPHICTYONIC COUNCIL:** Established at Thermopylæ by Amphictyon, for the management of all affairs relative to Greece. This celebrated council, which was composed of the wisest and most virtuous men of some cities of Greece, consisted of twelve delegates, 1498 B. C. Other cities in process of time sent also some of their citizens to the council of the Amphictyons, and in the age of Antoninus Pius, they were increased to the number of thirty.—*Suidas*.

**AMPHITHEATRES.** They may be said to be the invention of Julius Cæsar and Curio: the latter was the celebrated orator, who called the former in full senate "*Omniū mulierum virum, et omniū virorum mulierem*." In the Roman amphitheatres, which were vast round and oval buildings, the people assembled to see the combats of gladiators, of wild beasts, and other exhibitions; they were generally built of wood, but Statilius Taurus made one of stone, under Augustus Cæsar. The amphitheatre of Vespasian was built A. D. 79; and is said to have been a regular fortress in 1312. The amphitheatre of Verona was next in size, and then that of Nismes.

**AMSTERDAM.** This noble city was the castle of Amstel in A. D. 1100; and its building, as a city, was commenced about 1203. Its famous exchange was built in 1634; and the stadthouse, one of the noblest palaces in the world, in 1648; this latter cost three millions of guilders, a prodigious sum at that time. It is built upon 13,659 piles, and the magnificence of the structure is, for its size, both in external and internal grandeur, perhaps without a parallel in Europe. Amsterdam surrendered to the king of Prussia, when that prince invaded Holland in favor of the stadtholder, in 1787. The French were admitted without resistance, Jan. 18, 1795. The ancient government was restored in November, 1813. See *Holland*.

**AMULETS, OR CHARMS.** All nations have been fond of amulets. The Egyptians had a great variety; so had the Jews, Chaldeans, and Persians. Among the Greeks, they were much used in exciting or conquering the passion of love. They were also in estimation among the Romans.—*Pliny, Ovid*. Among the Christians of early ages, amulets were made of the wood of the true cross, about A. D. 328. They have been sanctioned by religion and astrology, and even in modern times by medical and other sciences—witness the anodyne necklace, &c. The pope and Catholic clergy make and sell amulets and charms even to this day.—*Ashe*.

**ANABAPTISTS.** This sect arose about A. D. 1525, and was known in England before 1549. John of Leyden, Muncer, Storck, and other German enthusiasts, about the time of the reformation, spread its doctrines. The anabaptists of Munster (who are, of course, properly distinguished from the existing mild sect of this name in England) taught that infant baptism was a contrivance of the devil, that there is no original sin, that men have a free will in spiritual things, and other doctrines still more wild and absurd. Munster they called Mount Zion, and one Mathias, a baker, was declared to be the king of Zion. Their enthusiasm led them to the maddest practices, and

they, at length, rose in arms under pretence of gospel liberty. Munster was taken about fifteen months afterwards, and they were all put to death. The anabaptists of England differ from other Protestants in little more than the not baptizing children, as appears by a confession of faith, published by the representatives of above one hundred of their congregations, in 1689.

**ANACREONTIC VERSE.** Commonly of the jovial or Bacchanalian strain, named after Anacreon, of Teos, the Greek lyric poet, about 510 B. C. The odes of Anacreon are much prized; their author lived in a constant round of drunkenness and debauchery, and was choked by a grape stone in his eighty-fifth year.—*Stanley's Lives of the Poets.*

**ANAGRAM,** a transposition of the letters of a name or sentence; as from *Mary*, the name of the Virgin, is made *army*. On the question put by Pilate to our Saviour, "*Quid est veritas?*" we have this admirable anagram, "*Est vir qui adest.*" The French are said to have introduced the art as now practised, in the reign of Charles IX., about the year 1560.—*Henault.*

**ANATHEMAS.** The word had four significations among the Jews: the anathema, or curse, was the devoting some person or thing to destruction. We have a remarkable instance of it in the city of Jericho (see *Joshua* vi. 17). Anathemas were used by the primitive churches, A. D. 387. such ecclesiastical denunciations caused great terror in England up to the close of Elizabeth's reign.—*Rapin.* The church anathema, or curse, with excommunication, and other severities of the Romish religion, are still practised in Catholic countries to this day.—*Ashe.*

**ANATOMY.** The structure of the human body was made part of the philosophical investigations of Plato and Xenophon; and it became a branch of medical art under Hippocrates, about 420 B. C. But Erasistratus and Herophilus may be regarded as being the fathers of anatomy: they were the first to dissect the human form, as anatomical research had been confined to brutes only: it is mentioned that they practised upon the bodies of living criminals, about 300 and 293 B. C. In England, the schools were supplied with subjects unlawfully exhumed from graves; and, until lately, the bodies of executed criminals were ordered for dissection. The first anatomical plates were designed by Vesalius, about A. D. 1538. The discoveries of Harvey were made in 1616. The anatomy of plants was discovered in 1680.—*Freind's History of Physic.*

**ANCHORITES.** Paul, Anthony, and Hilarion were the first anchorites. Many of the early anchorites lived in caves and deserts, and practised great austerities. Some were analogous to the fakcers, who impose voluntary punishments upon themselves as atonement for their sins, and as being acceptable to God; and their modes of torture were often extravagant and criminal. The order first arose in the fourth century.

**ANCHORS FOR SHIPS,** are of ancient use, and the invention belongs to the Tuscans.—*Pliny.* The second tooth, or fluke, was added by Anacharsis, the Scythian.—*Strabo.* Anchors were first forged in England A. D. 578. The anchors of a first-rate ship of war (of which such a ship has four) will weigh 90 cwt. each, and each of them will cost £450.—*Phillips.*

**ANEMOMETER,** to measure the strength and velocity of the wind, was invented by Wolfius, in 1709. The extreme velocity was found by Dr. Lind to be 93 miles per hour. See article *Winds.*

**ANGELIC KNIGHTS OF ST. GEORGE.** Instituted in Greece, A. D. 456. The *Angelici* were instituted by Angelus Comnenus, emperor of Constantinople, 1191. The *Angelica*, an order of nuns, was founded at Milan by Louisa Torelli, A. D. 1534.

**ANGELS.** Authors are divided as to the time of the creation of angels. Some will have it to have been at the same time with our world; others, before all ages, that is, from eternity. This latter is Origen's opinion.—*Cave's Hist. Literat.* The Jews had ten orders of angels; and the popes have recognized nine choirs and three hierarchies.

**ANGELS, IN COMMERCE.** An angel was an ancient gold coin, weighing four pennyweights, and was valued at 6s. 8d. in the reign of Henry VI., and at 10s. in the reign of Elizabeth, 1562. The angelot was an ancient gold coin, value half an angel, struck at Paris when that capital was in the hands of the English, in the reign of Henry VI., 1431.—*Wood.*

**ANGLING.** The origin of this art is involved in obscurity; allusion is made to it by the Greeks and Romans, and in the most ancient books of the Bible, as *Amos*. It came into general repute in England about the period of the Reformation. Wynkin de Worde's *Treatyse of Flysshinge*, the first book printed on angling, appeared in 1496. Isaac Walton's book was printed in 1653.

**ANIMAL MAGNETISM.** This deception was introduced by father Hehl, at Vienna, about 1774; and had wonderful success in France, in 1788. It had its dupes in England also, in 1789; but it exploded a few years afterwards. It was a pretended mode of curing all manner of diseases by means of *sympathetic affection* between the sick person and the operator. The effect on the patient was supposed to depend on certain motions of the fingers and features of the operator, he placing himself immediately before the patient, whose eyes were to be fixed on his. After playing in this manner on the imagination and enfeebled mind of the sick, and performing a number of distortions and grimaces, the cure was said to be completed.—*Haydn.*

**ANGLO-SAXONS, or ANGLES.** The name of England is derived from a village near Sleswick, called *Anglen*, whose population joined the first Saxon freebooters. Egbert called his kingdom Anglesland. Anglia East was a kingdom of the heptarchy, founded by the Angles, one of whose chiefs, Uffa, assumed the title of king, A. D. 575: the kingdom ceased in 792.—See *Britain.*

**ANNIHILATION.** The doctrine of annihilation was unknown to the Hebrews, Greeks, and Latins: the ancient philosophers denied annihilation; the first notions of which are said to have arisen from the Christian theology.—*Dr. Burnet.*

**ANNO DOMINI;** in the year of our Lord; used by the Christian world, and abbreviated A. D. This is the computation of time from the incarnation of our Saviour and is called the vulgar era; first adopted in the year 525. See *Era.* Charles III. of Germany was the first sovereign who added "in the year of our Lord" to his reign, in 879.

**ANTARCTIC.** The south pole is so called, because it is opposite to the north or arctic pole. A continent of 1700 miles of coast from east to west, and 64 to 66 degrees south, was discovered in the Antarctic Ocean by French and American Exploring Expeditions, under D'Urville and Wilkes, respectively on the same day, Jan. 19, 1840; a coincidence the more singular, as the discoverers were at a distance from each other of 720 miles. It was coasted by captain Wilkes for 1700 miles. Mr. Briscoe, of the British Navy, fell in with land, which he coasted for 300 miles in lat. 67, long. 50, in the year 1830.

**ANTEDILUVIANS.** According to the tables of Mr. Whiston, the number of people in the ancient world, or world as it existed previous to the Flood, reached to the enormous amount of 549,755 millions, in the year of the year 1482. Burnet has supposed that the first human pair might have left, &c.

end of the first century, ten married couples; and from these, allowing them to multiply in the same decuple proportion as the first pair did, would rise, in 1500 years, a greater number of persons than the earth was capable of holding. He therefore suggests a quadruple multiplication only; and then exhibits the following table of increase during the first sixteen centuries that preceded the Flood:—

|                  |                       |                         |                             |
|------------------|-----------------------|-------------------------|-----------------------------|
| I. . . . . 10    | V. . . . . 2,560      | IX. . . . . 655,360     | XIII. . . . . 167,142,160   |
| II. . . . . 40   | VI. . . . . 10,240    | X. . . . . 2,621,440    | XIV. . . . . 671,088,640    |
| III. . . . . 160 | VII. . . . . 40,960   | XI. . . . . 10,485,760  | XV. . . . . 2,684,354,460   |
| IV. . . . . 640  | VIII. . . . . 163,840 | XII. . . . . 41,943,040 | XVI. . . . . 10,737,418,240 |

This calculation, although the most moderate made, exceeds, it will be seen, by at least ten times, the present number of mankind, which, at the highest estimate, amounts to only a thousand millions.

**ANTHEMS, or HYMNS.** Hilary, bishop of Poitiers, and St. Ambrose, were the first who composed them, about the middle of the fourth century.—*Lenglet*. They were introduced into the church service in 386.—*Baker*. Ignatius is said to have introduced them into the Greek, and St. Ambrose into the Western church. They were introduced into the reformed churches in queen Elizabeth's reign, about 1565.

**ANTHROPOPHAGI.** Eaters of human flesh have existed in all ages of the world. The Cyclops and Lestrygonæ are represented as man-eaters, by Homer; and the Essedonian Scythians were so, according to Herodotus. Diogenes asserted that we might as well eat the flesh of men, as that of other animals; and the practice still exists in Africa, and the South Sea Islands, &c.

**ANTIMONY.** This mineral was very early known, and applied by the ancients to various purposes. It was used as paint to blacken both men's and women's eyes, as appears from 2 *Kings* ix. 30, and *Jeremiah* iv. 30, and in eastern countries is thus used to this day. When mixed with lead, it makes types for printing; and in physic its uses are so various that, according to its preparation, alone, or in company with one or two associates, it is sufficient to answer all a physician desires in an apothecary's shop.—*Boyle*. We are indebted to Basil Valentine for the earliest account of various processes, about 1410.—*Priestley*.

**ANTINOMIANS,** the name first applied by Luther to John Agricola, in 1538. The Antinomians trust in the gospel, and not in their deeds; and hold that crimes are not crimes when committed by them, that their own good works are of no effect; that no man should be troubled in conscience for sin, and other equally absurd doctrines.

**ANTIOCH,** built by Seleucus, after the battle of Ipsus, 301 B. C. In one day, 100,000 of its people were slain by the Jews, 145 B. C. In this city, once the capital of Syria, the disciples of the Redeemer were first called Christians. The Era of Antioch is much used by the early Christian writers attached to the churches of Antioch and Alexandria: it placed the creation 5492 years B. C.

**ANTIPODES.** Plato is said to be the first who thought it possible that antipodes existed, about 368 B. C. Boniface, archbishop of Mentz, legate of pope Zachary, is said to have denounced a bishop as a heretic for maintaining this doctrine, A. D. 741. The antipodes of England lie to the south-east of New Zealand; and near the spot is a small island, called Antipodes Island.—*Brookes*.

**ANTIQUARIES, AND ANTIQUE.** The term *antique* is applied to the productions of the arts from the age of Alexander to the time of the irruption of the Goths into Italy, in A. D. 400. A college of antiquaries is said to have existed in Ireland 700 years B. C.; but this has very little pretensions to

credit. A society was founded by archbishop Parker, Camden, Stowe, and others, in 1572.—*Spelman*. Application was made in 1589 to Elizabeth for a charter, but her death ensued, and her successor, James I., was far from favoring the design. In 1717 this society was revived, and in 1751 it received its charter of incorporation from George II. It began to publish its discoveries, &c., under the title of *Archæologia*, in 1770. The Society of Antiquaries of Edinburgh was founded in 1780.

ANTI-RENTISM. In Rensselaer and Delaware counties, State of New-York, an armed resistance of the tenants (chiefly those on the Van Rensselaer estates) to the demand for the payment of rents, commenced in 1846. See *Riots*. Gov. Young pardons eighteen anti-rent rioters, and releases them from prison, Jan. 27, 1847.

ANTI-TRINITARIANS. Theodotus of Byzantium is supposed to have been the first who advocated the simple humanity of Jesus, at the close of the second century. This doctrine spread widely after the reformation, when it was adopted by Lælius and Faustus Socinus. *Bayle*.—See *Arians*, *Socinians*, and *Unitarians*.

ANTWERP. First mentioned in history in A. D. 517. Its fine exchange built in 1531. Taken after a long and memorable siege by the prince of Parma, in 1585. It was then the chief mart of Flemish commerce, but the civil wars caused by the tyranny of Philip II. drove the trade to Amsterdam. The remarkable crucifix of bronze, thirty-three feet high, in the principal street, was formed from the demolished statue of the cruel duke of Alva, which he had himself set up in the citadel. Antwerp was the seat of the civil war between the Belgians and the house of Orange, 1830-31. In the late revolution, the Belgian troops having entered Antwerp, were opposed by the Dutch garrison, who, after a dreadful conflict, being driven into the citadel, cannonaded the town with red-hot balls and shells, doing immense mischief, Oct. 27, 1830. General Chassé surrendered the citadel to the French after a destructive bombardment, Nov. 24, 1832. See *Belgium*.

APOCALYPSE, the Revelation of St. John, written in the Isle of Patmos, about A. D. 95.—*Irenæus*. Some ascribe the authorship to Cerinthus, the heretic, and others to John, the presbyter, of Ephesus. In the first centuries many churches disowned it, and in the fourth century it was excluded from the sacred canon by the council of Laodicea, but was again received by other councils, and confirmed by that of Trent, held 1545, *et seq.* Rejected by Luther, Michaelis, and others, and its authority questioned in all ages from the time of Justin Martyr, who wrote his first Apology for the Christians in A. D. 139.

APOCRYPHA. In the preface to the Apocrypha it is said, "These books are neyther found in the Hebrue nor in the Chaldæ."—*Bible*, 1539. The history of the Apocrypha ends 135 B. C. The books were not in the Jewish canon, but they were received as canonical by the Catholic church, and so adjudged by the council of Trent, held in 1545, *et seq.*—*Ashe*.

APOLLINARIANS, the followers of Apollinarius, bishop of Laodicea, who taught that the divinity of Christ was instead of a soul to him; that his flesh was pre-existent to his appearance upon earth, and that it was sent down from heaven, and conveyed through the Virgin, as through a channel; that there were two sons, one born of God, the other of the Virgin, &c. Apollinarius was deposed for his opinions in A. D. 378.

APOLLO, TEMPLES OF. Apollo, the god of all the fine arts, of medicine, music, poetry, and eloquence, had temples and statues erected to him in almost every country, particularly Egypt, Greece, and Italy. His most splendid temple was at Delphi, built 1263 B. C.—See *Delphi*. His temple at Daphnæ

built 434 B. C., during a period in which pestilence raged, was burnt in A. D. 362, and the Christians accused of the crime.—*Lenglet*.

**APOSTLE'S CREED.** The summary of belief of the Christian faith, called the Apostle's Creed, is generally believed to have been composed a great while after their time.—*Pardon*. The repeating of this creed in public worship was ordained in the Greek church at Antioch, and was instituted in the Roman church in the eleventh century; whence it passed to the church of England at the period of the reformation, in 1534.

**APOSTOLICI.** The first sect of Apostolici arose in the third century; the second sect was founded by Sagarelli, who was burned alive at Parma, A. D. 300. They wandered about, clothed in white, with long beards, dishevelled hair, and bare heads, accompanied by women whom they called their spiritual sisters, preaching against the growing corruption of the church of Rome, and predicting its downfall.

**APOTHEOSIS.** A ceremony of the ancient nations of the world, by which they raised their kings and heroes to the rank of deities. The nations of the East were the first who paid divine honors to their great men, and the Romans followed their example, and not only deified the most prudent and humane of their emperors, but also the most cruel and profligate.—*Herodian*. This honor of deifying the deceased emperor was begun at Rome by Augustus, in favor of Julius Cæsar, B. C. 13.—*Tillemont*.

**APPEAL OF MURDER.** By the late law of England, a man in an appeal of murder might fight with the appellant, thereby to make proof of his guilt or innocence. In 1817, a young maid, Mary Ashford, was believed to have been violated and murdered by Abraham Thornton, who, in appeal, claimed his right to his wager of battle, which the court allowed; but the appellant (the brother of the maid) refused the challenge, and the criminal escaped, April 16, 1818. This law was immediately afterwards struck from off the statute book, 59 George III., 1819.

**APPRAISERS.** The rating and valuation of goods for another was an early business in England; and so early as 11 Edward I. it was a law, that if they valued the goods of the parties too high, the appraiser should take them at the price appraised. 1282.

**APRIL.** The fourth month of the year according to the vulgar computation, but the second according to the ancient Romans, Numa Pompilius having introduced *Januarius* and *Februarius* before it 713 B. C.—*Peachment*.

**AQUARIANS.** A sect in the primitive church, said to have been founded by Tatian in the second century, and who forbore the use of wine even in the sacrament, and used nothing but water.

**AQUEDUCTS.** Appius Claudius advised and constructed the first aqueduct, which was therefore called the *Appian-way*, about 453 B. C. Aqueducts of every kind were among the wonders of Rome.—*Livy*. There are now some remarkable aqueducts in Europe: that at Lisbon is of great extent and beauty; that at Segovia has 129 arches; and that at Versailles is three miles long, and of immense height, with 242 arches in three stories. The stupendous aqueduct on the Ellesmere canal, in England, is 1007 feet in length, and 126 feet high; it was opened Dec. 26, 1805.

**AQUITAINE,** formerly belonged (together with Normandy) to the kings of England, as descendants of William the Conqueror. It was erected into a principality in 1362, and was annexed to France in 1370. The title of duke of Aquitaine was taken by the crown of England on the conquest of this duchy by Henry V. in 1418; but was lost in the reign of Henry VI.

**ARABIA.** This country is said never to have been conquered; the Arabians made no figure in history till A. D. 622, when, under the new name of Sara-

cens, they followed Mahomet (a native of Arabia) as their general and prophet, and made considerable conquests.—*Priestley*.

**ARBELA, BATTLE OF.** The third and decisive battle between Alexander the Great and Darius Codomanus, which decided the fate of Persia, 331 B.C. The army of Darius consisted of 1,000,000 of foot and 40,000 horse; the Macedonian army amounted to only 40,000 foot and 7,000 horse.—*Arrian*. The gold and silver found in the cities of Susa, Persepolis, and Babylon, which fell to Alexander from this victory, amounted to thirty millions sterling; and the jewels and other precious spoil, belonging to Darius, sufficed to load 20,000 mules and 5,000 camels.—*Plutarch*.

**ARCADIA.** The people of this country were very ancient, and reckoned themselves of longer standing than the moon; they were more rude in their manners than any of the Greeks, from whom they were shut up in a valley, surrounded with mountains. Pelasgus taught them to feed on acorns, as being more nutritious than herbs, their former food; and for this discovery they honored him as a god, 1521 B.C. Arcadia had twenty-five kings, whose history is altogether fabulous. The Arcadians were fond of military glory, although shepherds; and frequently hired themselves to fight the battles of other states.—*Eustathius*. A colony of Arcadians was conducted by CEnotrus into Italy, 1710 B.C., and the country in which it settled was afterwards called *Magna Græcia*. A colony under Evander emigrated 1244 B.C.—*Idem*.

**ARCHBISHOP.** This dignity was known in the East about A.D. 320. Athanasius conferred it on his successor. In these realms the dignity is nearly coeval with the establishment of Christianity. Before the Saxons came into England there were three sees, London, York, and Caerleon-upon-Usk; but soon after the arrival of St. Austin, he settled the metropolitan see at Canterbury, A.D. 596.

**ARCHDEACONS.** There are sixty church officers of this rank in England, and thirty-four in Ireland. The name was given to the first or eldest deacon, who attended on the bishop, without any power; but since the council of Nice, his function is become a dignity, and set above that of priest, though anciently it was quite otherwise. The appointment is referred to A.D. 1075. The archdeacon's court is the lowest in ecclesiastical polity: an appeal lies from it to the consistorial court, stat. 24 Henry VIII. 1532.

**ARCHERY.** It originated, according to the fanciful opinion of the poet Claudian, from the porcupine being observed to cast its quills whenever it was offended. Plato ascribes the invention to Apollo, by whom it was communicated to the Cretans. The eastern nations were expert in archery in the earliest ages, and the precision of the ancient archer is scarcely exceeded by our skill in modern arms. Aster of Amphipolis, upon being slighted by Philip, king of Macedonia, aimed an arrow at him. The arrow, on which was written "Aimed at Philip's right eye," struck it, and put it out; and Philip threw back the arrow with these words: "If Philip take the town, Aster shall be hanged." The conqueror kept his word.

**ARCHERY IN ENGLAND.** It was introduced previously to A.D. 440, and Harold and his two brothers were killed by arrows shot from the cross-bow of the Norman soldiers at the battle of Hastings, in 1066; that which killed the king pierced him in the brain. Richard I. revived archery in England in 1190, and was himself killed by an arrow in 1199. The victories of Crecy, Poitiers, and Agincourt, were won chiefly by archers. The usual range of the long-bow was from 300 to 400 yards. Robin Hood and Little John, it is said, shot twice that distance. Four thousand archers surrounded the houses of Parliament, ready to shoot the king and the members, 21 Richard II. 1397.—*Stowe*. The citizens of London were formed into companies of archers in the reign of Edward III.: they were formed into a corporate

body by the style of "The Fraternity of St. George," 29 Henry VIII. 1538.  
—*Northouk's History of London.*

**ARCHES, TRIUMPHAL,** are traced to the era of the Macedonian conquest by the best writers. The triumphal arches of the Romans form a leading feature in their architecture. Those of Trajan (erected A. D. 114) and Constantine were magnificent.

**ARCHITECTURE** was cultivated by the Tyrians, about 1100 B. C. Their King, Hiram, supplied Solomon with cedar, gold, silver, and other materials for the Temple, in the building of which he assisted, 1015 B. C. The art passed to Greece, and from Greece to Rome. The style called Gothic came into vogue in the ninth century. The Saracens of Spain, being engaged during peace to build mosques, introduced grotesque carvings, &c., and the ponderous sublimity of bad taste; which species is known by elliptic arches and buttresses. The circular arch distinguishes the Norman-Gothic from the Saracenic, and came in with Henry I. The true Grecian style did not fully revive till about the reign of James I. 1603.

**ARCHONS.** When royalty was abolished at Athens, the executive government was vested in elective magistrates called archons, whose office continues for life. Medon, eldest son of Codrus, is the first who obtained this dignity, 1070 B. C.

**ARCOLA, BATTLE OF,** between the French under general Buonaparte, and the Austrians under field-marshal Alvinzy, fought Nov. 19, 1796. The result of this bloody conflict, which was fought for eight successive days, was the loss on the part of the Austrians of 12,000 men, in killed, wounded, and prisoners, four flags, and eighteen guns.

**ARCTIC EXPEDITIONS.** Several have been undertaken by England, and some by Russia and other countries. Sir Martin Probisher was the first Englishman who attempted to find a north-west passage to China, A. D. 1576. Davis's expedition to the Arctic regions was undertaken in 1585. After a number of similar adventurous voyages, Baffin, an Englishman, attempted to find a north-west passage, in 1616. See *Baffin's Bay*. For the subsequent and late expeditions of this kind, including among the latter those of Buchan, Franklin, Ross, Parry, Liddon, Lyon, Back, &c., see *North-West Passage*.

**AREOPAGITÆ.** A famous council said to have heard causes in the dark, because the judges were blind to all but facts, instituted at Athens, 1507 B. C. —*Arund. Marbles.* The name is derived from the Greek *Areos pagos*, the *Hill of Mars*, because Mars was the first who was tried there for the murder of Hallirhotius, who had violated his daughter Alcippa. Whatever causes were pleaded before them, were to be divested of all oratory and fine speaking, lest eloquence should charm their ears, and corrupt their judgment. Hence arose the most just and impartial decisions.

**ARGENTARIA, BATTLE OF.** One of the most renowned in its times, fought in Alsace, between the Allemanni and the Romans, the former being defeated by the latter with the loss of more than 35,000 out of 40,000 men, A. D. 378, —*Dufresnoy.*

**ARGONAUTIC EXPEDITION,** undertaken by Jason to avenge the death of Phryxus, and recover his treasures seized by the king of Colchis. The ship in which Phryxus had sailed to Colchis having been adorned with the figure of a ram, it induced the poets to pretend that the journey of Jason was for the recovery of the golden fleece. This is the first naval expedition on record; it made a great noise in Greece, and many kings and the first heroes of the age accompanied Jason, whose ship was called *Argo*, from its builder, 1263 B. C. —*Dufresnoy.*

**ARGOS.** This kingdom was founded by Inachus, 1856 B. C., or 1680 years be-

fore the first Olympiad.—*Blair*. The nine kings from the founder were called *Inachida*, of whom the fourth was Argus, and he gave his name to the country. When the Heraclidæ took possession of Peloponnesus, B. C. 1102, Temenus seized Argos and its dependencies. Argos was afterwards a republic, and distinguished itself in all the wars of Greece.—*Euripides*.

|                                                                                                                |                                                                                                                         |

| Sthenelus reigns . . . 1485                                                                                    | Perseus leaves Argos, and founds Mycenæ ( <i>which see</i> ) . . . 1313                                                 |
| Gelanor is deposed by Danaus . . . 1474                                                                        |                                                                                                                         |
| Feast of the Flambeaux, in honor of                                                                            |                                                                                                                         |

Argos, in modern history, was taken from the Venetians, A. D. 1686. It was lost to the Turks in 1716, since when it continued in their hands until 1826. Argos became united in the sovereignty of Greece under Otho, the present and first king, January 25, 1833. See *Greece*.

**ARIANS.** The followers of Arius, a numerous sect of Christians, who deny the divinity of CHRIST: they arose about A. D. 315. The Arians were condemned by the council of Nice, in 325; but their doctrine became for a time the reigning religion in the East. It was favored by Constantine, 319. Carried into Africa under the Vandals, in the fifth century, and into Asia under the Goths. Servetus published his treatise against the Trinity, 1531, and hence arose the modern system of Arianism in Geneva. Arius died in 336. Servetus was burnt, 1553.—*Varillas, Hist de l'Hérésie*.

**ARITHMETIC.** Where first invented is not known, at least with certainty. It was brought from Egypt into Greece by Thales, about 600 B. C. The oldest treatise upon arithmetic is by Euclid (7th, 8th, and 9th books of his *Elements*), about 300 B. C. The sexagesimal arithmetic of Ptolemy was used A. D. 130. Diophantus of Alexandria was the author of thirteen books of Arithmetical questions (of which six are extant) in 156. Notation by nine digits and zero, known at least as early as the sixth century in Hindostan—introduced from thence into Arabia, about 900—into Spain, 1050—into England, 1253. The date in Caxton's *Mirror of the World*, Arabic characters, is 1480. Arithmetic of decimals invented, 1482. First work printed in England on arithmetic (*de Arte Supputandi*) was by Tostall, bishop of Durham, 1522. The theory of decimal fractions was perfected by Lord Napier in his *Rabdologia*, in 1617.

**ARK.** Mount Ararat is venerated by the Armenians, from a belief of its being the place on which Noah's ark rested after the universal Deluge, 2347 B. C. But Apamea, in Phrygia, claims to be the spot; and medals have been struck there with a chest on the waters, and the letters NOE, and two doves: this place is 300 miles west of Ararat. The ark was 300 cubits in length, fifty in breadth, and thirty high; but most interpreters suppose this cubit to be about a foot and a half, and not the geometrical one of six. There were, we are told, three floors—the first for beasts, the second for provisions, and the third for birds, and Noah's family. It was not made like a ship, but came near the figure of a square, growing gradually narrower to the top. There was a door in the first floor, and a great window in the third.

**ARKANSAS,** one of the United States, was a part of the Louisiana purchase. It was made a separate territory in 1819, and was admitted into the Union in 1836. Population in 1830, 30,388; in 1840, 97,574, including 19,935 slaves

**ARMADA, THE INVINCIBLE.** The famous Spanish armament so called consisted of 150 ships, 2650 great guns, 20,000 soldiers, 8000 sailors, and 2000 volunteers, under the duke of Medina Sidonia. It arrived in the Channel, July 19, 1588, and was defeated the next day by Drake and Howard. Ten fire-ships having been sent into the enemies' fleet, they cut their cables, put to sea, and endeavored to return to their rendezvous between Calais and Gravelines: the English fell upon them, took many ships, and admiral Howard maintained a running fight from the 21st July to the 27th, obliging the shattered fleet to bear away for Scotland and Ireland, where a storm dispersed them, and the remainder of the armament returned by the North Sea to Spain. The Spaniards lost fifteen capital ships in the engagement, and 5,000 men; seventeen ships were lost or taken on the coast of Ireland, and upwards of 5000 men were drowned, killed, or taken prisoners. The English lost but one ship.—*Rapin, Carte, Hume.*

**ARMAGH, SEE OF,** the first ecclesiastical dignity in Ireland, was founded by St. Patrick, its first bishop, in 444.

**ARMED NEUTRALITY.** The confederacy, so called, of the northern powers, against England, was commenced by the empress of Russia in 1780; but its objects were defeated in 1781. The pretension was renewed, and a treaty ratified in order to cause their flags to be respected by the belligerent powers, December 16, 1800. The principle that neutral flags protect neutral bottoms being contrary to the maritime system of England, the British cabinet remonstrated, and Nelson and Parker destroyed the fleet of Denmark before Copenhagen, April 2, 1801. That power, in consequence, was obliged to secede from the alliance, and acknowledge the claim of England to the empire of the sea; and the Armed Neutrality was soon after dissolved.

**ARMENIA.** Here Noah and his people resided when they left the ark, 2347 B. C. After being subject successively to the three great monarchies, Armenia fell to the kings of Syria. The Armenians were the original worshippers of fire: they also paid great veneration to *Venus Anaitis*, to whose priests even the highest classes of the people prostituted their daughters, prior to marriage.—*Martin's Mémoires sur L'Arménie.*

**ARMENIAN ERA** commenced on the 9th of July, A. D. 552: the Ecclesiastical year on the 11th August. To reduce this last to our time, add 551 years and 221 days; and in leap years subtract one day from March 1 to August 10. The Armenians use the old Julian style and months in their correspondence with Europeans.

**ARMILLARY SPHERE.** Commonly made of brass, and disposed in such a manner that the greater and lesser circles of the sphere are seen in their

natural position and motion, the whole being comprised in a frame. It is said to have been invented by Eratosthenes, about 255 B. C.

**ARMINIANS** (the) chiefly contend for the doctrine of universal redemption, and generally espouse the principles of the Church of England: especially asserting the subordination of the Christian church to the civil powers. They also contend for the *efficacy* of good works, as well as their *necessity*, in securing man's salvation. James I. and Charles I. favored the doctrines of the Arminians; and the principles of the sect prevail generally in Holland and elsewhere, though condemned at the synod of Dort (see *Dort*) in 1618. Arminius, who was a divinity professor at Leyden, died in 1609.—*Brandt*.

**ARMORIAL BEARINGS** became hereditary in families at the close of the twelfth century. They took their rise from the knights painting their banners with different figures, and were introduced by the Crusaders, in order at first to distinguish noblemen in battle A. D. 1100. The lines to denote colors in arms, by their direction or intersection, were invented by Columbiere in 1639. Armorial bearings were taxed in 1798—and again in 1808.

**ARMOR.** The warlike Europeans at first despised any other defence than the shield. Skins and padded hides were first used; and brass and iron armor, in plates or scales, followed. The first body-armor of the Britons was skins of wild beasts, exchanged, after the Roman conquest, for the well-tanned leathern cuirass.—*Tacitus*. This latter continued till the Anglo-Saxon era. Hengist is said to have had scale armor, A. D. 449. The heavy cavalry were covered with a coat of mail, Henry III. 1216. Some horsemen had visors, and skull caps, same reign. Armor became exceedingly splendid about 1350. The armor of plate commenced, 1407. Black armor, used, not only for battle, but for mourning, Henry V. 1413. The armor of Henry VII. consisted of a cuirass of steel, in the form of a pair of stays, about 1500. Armor ceased to reach below the knees, Charles I. 1625. In the reign of Charles II. officers wore no other armor than a large gorget, which is commemorated in the diminutive ornament known at the present day.—*McYrick*.

**ARMS.** The club was the first offensive weapon; then followed the mace, battle-axe, pike, spear, javelin, sword, and dagger. Among ancient missiles were bows and arrows. Pliny ascribes the invention of the sling to the Phœnicians. See the *various weapons* through the volume.

**ARMY.** Ninus and Semiramis had armies amounting to nearly two millions of fighting men, 2017, B. C. The first guards and regular troops as a standing army were formed by Saul, 1093 B. C.—*Eusebius*. One of the first standing armies of which we have any account, is that of Philip of Macedon. The first standing army, existing as such, in modern times, was maintained in France by Charles VII. in 1445. Standing armies were introduced by Charles I. in 1638; they were declared illegal in England, 31 Charles II. 1679. The chief European nations have had in their service the following armies: Spain 150,000 men; Great Britain, 310,000; Prussia, 350,000; Turkey, 450,000; Austria, 500,000; Russia, 560,000; and France, 680,000.

**ARMY, BRITISH.** Statement of the effective military strength of the United Kingdom at the decennial periods respectively mentioned, and of the sums voted for military expenditure, drawn from parliamentary returns and other official records:

|                                                 |                          |                      |
|-------------------------------------------------|--------------------------|----------------------|
| 1780, Time of war; troops of the line . . .     | amount 110,000 men . . . | sum voted £7,847,000 |
| 1800, War . . .                                 | ditto 168,000 men . . .  | ditto 17,973,000     |
| 1810, War; army, including foreign troops . . . | ditto 300,000 men . . .  | ditto 26,748,000     |
| 1815, Last year of the war . . .                | ditto 300,000 men . . .  | ditto 39,150,000     |
| 1820, Time of peace; war incumbrances . . .     | ditto 89,100 men . . .   | ditto 18,253,000     |
| 1830, Peace . . .                               | ditto 89,300 men . . .   | ditto 6,991,000      |

In 1845, the army, of all ranks, numbered 100,011 men; and the sum voted was £4,487,753. See *Militia* and *Volunteers*.

**ARTILLERY.** The first piece was a small one, contrived by Schwartz, a German cordelier, soon after the invention of gunpowder, in 1330. Artillery was used, it is said, by the Moors at Algeiras, in Spain, in the siege of 1341; it was used, according to our historians, at the battle of Cressy, in 1346, when Edward III. had four pieces of cannon, which gained him the battle. We had artillery at the siege of Calais, 1347. The Venitians first employed artillery against the Genoese at sea, 1377.—*Voltaire*. Cast in England, together with mortars for bomb-shells, by Flemish artists in Sussex, 1543.—*Rymer's Fædera*. Made of brass, 1635; improvements by Browne, 1728. See *Iron*.

**ARTS.** See *Literature*. In the eighth century, the whole circle of sciences was composed of these seven liberal arts, namely—grammar, rhetoric, logic, arithmetic, music, geometry, and astronomy.—*Harris*. The Royal Society of England (which see) obtained its charter April 2, 1663. The Society of Arts to promote the polite arts, commerce, manufactures, and mechanics, was instituted in 1754; it originated in the patriotic zeal of Mr. Shipley, and of its first president, lord Folkstone. The first public exhibition by the artists of the British metropolis took place in 1760, at the rooms of this society, and was repeated there for several years, till, in process of time, the Royal Academy was founded. See *Royal Academy*. The Society of British Artists was instituted May 21, 1823; and their first exhibition was opened April 19, 1824.—See *British Museum*; *British Institution*; *National Gallery*, &c.

**ARUNDELIAN MARBLES;** containing the chronology of ancient history from 1582 to 355 B. C., and said to have been sculptured 264 B. C. They consist of 37 statues, 128 busts, and 250 inscriptions, and were found in the Isle of Paros, in the reign of James I., about 1610. They were purchased by lord Arundel, and given to the university of Oxford, 1627. The characters are Greek, of which there are two translations: by *Selden*, 1628; by *Prideaux*, 1676.—See *Kidd's Tracts*; and *Porson's Treatise*, 1789.

**ASCALON, BATTLE OF;** in which Richard I. of England, commanding the Christian forces, defeated the sultan Saladin's army of 300,000 Saracens and other infidels. No less than 40,000 of the enemy were left dead on the field of battle; and the victorious Richard marched to Jerusalem, A. D. 1192.—*Rymer*.

**ASH-WEDNESDAY.** The primitive Christians did not commence their Lent until the Sunday, now called the first in Lent. Pope Felix III., in A. D. 487, first added the four days preceding the old Lent Sunday, to complete the number of fasting days to forty; Gregory the Great introduced the sprinkling of ashes on the first of the four additional days, and hence the name of *Dies Cinerum*, or Ash-Wednesday: at the Reformation this practice was abolished, "as being a mere shadow, or vain show."

**ASIA;** so called by the Greeks, from the nymph Asia, the daughter of Oceanus and Tethys, and wife of Japhet. Asia was the first quarter of the world peopled; here the law of God was first promulgated; here many of the greatest monarchies of the earth had their rise; and from hence most of the arts and sciences have been derived.—*Pardon*.

**ASPERNE, BATTLE OF,** between the Austrian army under the archduke Charles, and the French, fought on the 21st May, 1809, and two following days. In this most sanguinary fight, the loss of the former army exceeded 20,000 men, and the loss of the French was more than 30,000: it ended in the defeat of Bonaparte, who commanded in person, and was the severest check that he had yet received. The bridge of the Danube was destroyed, and his retreat endangered; but the success of the Austrians had no beneficial effect on the subsequent prosecution of the war.

**ASSASSINATION PLOT.** A conspiracy so called, formed by the earl of Aylesbury and others to assassinate king William III., near Richmond, Surrey, as

he came from hunting. The object of the conspiracy was to have been consummated February 15, 1695-6, but for its timely discovery by Prendergast.—*Hist. England.*

**ASSASSINS.** A tribe in Syria, a famous heretical sect among the Mahometans, settled in Persia, in A. D. 1090. In Syria, they possessed a large tract of land among the mountains of Lebanon. They murdered the marquis of Montferrat in 1192; they assassinated Lewis of Bavaria in 1213; the khan of Tartary was murdered in 1254. They were conquered by the Tartars in 1257; and were extirpated in 1272. The chief of the corps assumed the title of "*Ancient of the Mountains.*"

**ASSIENTO.** A contract between the king of Spain and other powers, for furnishing the Spanish dominions in America with negro slaves.—*Burke.* It began in 1689, and was vested in the South Sea Company in 1713. By the treaty of Utrecht it was transferred to the English, who were to furnish 4800 negroes annually to Spanish America. This contract was given up to Spain at the peace in 1748. See *Guinea.*

**ASSIGNATS.** Paper currency, to support the credit of the republic during the revolution, ordered by the National Assembly of France, April, 1790. At one period the enormous amount of eight milliards, or nearly 350 millions of pounds sterling of this paper were in circulation in France and its dependencies.—*Alison.*

**ASSUMPTION.** A festival observed by the church of Rome in honor of the Virgin Mary, who, as the Catholics believe, was taken up to heaven in her corporeal form, body and spirit, on August 15, A. D. 45. Mary is reported to have been in her 75th year. The festival is said to have been instituted in 813.

**ASSURANCE.** See *Insurance.* The practice is of great antiquity. Suetonius ascribes the contrivance to Claudius Cæsar, A. D. 43. It is certain that assurance of ships was practised in the year 45. The first regulations concerning it are in the *Lex Oleron*, by which it appears to have been known in Europe very generally in 1194. The custom of Lombard-street was made a precedent for all policies at Antwerp, and in the Low Countries; but the first statute to prevent frauds from private assurers was made 43 Elizabeth, 1601.—*Molineaux's Lex Mercatoria.*

**ASSYRIAN EMPIRE.** This is the earliest recorded empire—that of Bacchus wanting records. It commenced under Ninus, who was the Jupiter of the Assyrians, and the Hercules of the Chaldeans, 2069 B. C. It arose out of the union of two powerful kingdoms, Babylon and Assyria, or Nineveh, the latter founded by Ashur, and ending with Sardanapalus, 820 B. C. When this last-named prince was conquered by Arbaces, he shut himself up in his palace, with his concubines and eunuchs, and causing it to be set on fire, they all perished in the flames. On the ruins of the empire were formed the Assyrians of Babylon, Nineveh, and the Median kingdom.—*Lenglet.*

The tower of Babel built.—*Genesis* x. 6; xi. 1.—*Blair* - B. C. 2247

The prophet Jonah appears in the streets of Nineveh.—*Blair* - 840  
Nineveh taken by Arbaces - 840

**ASSYRIA, PROPER.** After the destruction of the first Assyrian monarchy, Phul, the last king's son, was raised to the throne by the Ninevites, 777 B.C., and the kingdom continued until 621 B.C., when Sarac, or Sardanapalus II., being besieged by the Medes and Babylonians, put his wife and children to death, and burnt himself in his palace, a fate somewhat similar to that of Sardanapalus I. See preceding article. Nineveh was then razed to the ground, and the conquerors divided Assyria.—*Blair*. It was finally conquered by the Turks in 1637 A.D.—*Priestley*.

|                                                                                                                                                                         |           |                                                                                                                                                                                  |           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| Phul raised to the throne, about the year.— <i>Blair</i> . . . . .                                                                                                      | B. **ASTROLOGY.** Judicial astrology was invented by the Chaldeans, and hence was transmitted to the Egyptians, Greeks, and Romans. It was much in vogue in France in the time of Catherine de Medicis, 1533.—*Henault*. The early history of astrology in England is very little known: Bede was addicted to it, 700; and so was Roger Bacon, 1260. Cecil, Lord Burleigh, calculated the nativity of Elizabeth; and she, and all the European princes, were the humble servants of Dee, the astrologer and conjurer. But the period of the Stuarts was the acme of astrology in England.—Sir Walter Scott has made ample use of sir William Lilly, the noted astrologer, in his tales of this period; and it is certain that Lilly was consulted by Charles I. respecting his projected escape from Carisbrook castle in 1647.—*Ferguson*.

**ASTRONOMY.** The earliest accounts we have of this science are those of Babylon, about 2234 B.C.—*Blair*. The study of astronomy was much advanced in Chaldaea under Nabonassar; it was known to the Chinese about 1100 B.C.; some say many centuries before. Lunar eclipses were observed at Babylon with exceeding accuracy, 720 B.C. Spherical form of the earth, and the true cause of lunar eclipses, taught by *Thales*, 640 B.C. Further discoveries by *Pythagoras*, who taught the doctrine of celestial motions, and believed in the plurality of habitable worlds, 500 B.C. *Hipparchus* began his observations at Rhodes, 167 B.C.—began his new cycle of the moon in 143, and made great advances in the science, 140 B.C. The precession of the equinoxes confirmed, and the places and distances of the planets discovered, by *Ptolemy*, A.D. 130. After the lapse of nearly seven centuries, during which time astronomy was neglected, it was resumed by the Arabs about 800; and was afterwards brought into Europe by the Moors of Barbary and Spain, but not sooner than 1201, when they also introduced geography.

The distance of the fixed stars is supposed to be 400,000 times greater from us than we are from the sun, that is to say, 88 millions of millions of miles; so that a cannon-ball would take near nine millions of years to reach one of them, supposing there were nothing to hinder it from pursuing its course thither. As light takes about eight minutes and a quarter to reach us from the sun, it would be about six years in coming from one of those stars; but the calculations of later astronomers prove some stars to be so distant, that their light must take centuries before it can reach us; and that every particle of light which enters our eyes left the star it comes from three or four hundred years ago.—*Objects of Science.*

**ASYLUMS, OR PRIVILEGED PLACES.** At first they were places of refuge for those who, by accident or necessity had done things that rendered them obnoxious to the law. God commanded the Jews to build certain cities for this purpose. The posterity of Hercules is said so have built one at Athens, to protect themselves against such as their father had irritated. Cadmus built one at Thebes, and Romulus one on Mount Palatine. A while after the coming of Christianity into England, superstitious veneration ran so high, that churches, monasteries, church-yards, and bishops' houses became asylums to all that fled to them, let the crime be what it would; of which very ill use was made, both by the clergy and laity. In London persons were secure from arrest in particular localities: these were the Minories, Salisbury-court, Whitefriars, Fulwood's-rents, Mitre-court, Baldwin's-gardens, the Savoy, Chink, Deadman's-place, Montague-close, and the Mint. This security was abolished A. D. 1696; but the last was not wholly suppressed until the reign of George I.—See *Privileged Places and Sanctuaries.*

**ATHANASIAN CREED AND CONTROVERSY.** The great controversy regarding the divinity of Christ, arose and extended between A. D. 333 and 351. Athanasius, who was a native of Alexandria, encountered great persecution at the hands of the Arians for his religious doctrines, and was exiled for them again and again. The creed which goes by his name is supposed by most authorities to have been written about the year 340; but it is affirmed by other writers to be the compilation of an African bishop in the fifth century.—*Du Pin.*

**ATHEISM.** This absurd doctrine has had its votaries and its martyrs. Spinoza, a foreigner, was its noted defender in the 17th century. Lucilio Vanini publicly taught atheism in France, and was condemned to be burnt at Toulouse in 1619. Mathias Knutzen, of Holstein, openly professed atheism, and had upwards of a thousand disciples in Germany about 1674; he travelled to make proselytes, and his followers were called *Conscienciaires*, because they held that there is no other deity than conscience. Many eminent men of various countries have been professors of Atheism, and even in England we have had writers tinged with it.—*Richardson. Ashe.* "Though a small draught of philosophy may lead a man into atheism, a deep draught will certainly bring him back again to the belief of a God."—*Lord Bacon.* "S"

*Dieu n'existait pas il faudrait l'inventer :"* If a God did not exist, it would be necessary to invent one.—*Voltaire*.

**ATHENÆA.** These were great festivals celebrated at Athens in honor of Minerva. One of them was called Panathenæa, and the other Chalcea; they were first instituted by Erectheus or Orpheus, 1397 B. C.; and Theseus afterwards renewed them, and caused them to be observed by all the people of Athens, the first every fifth year, 1234 B. C.—*Plutarch*.

**ATHENÆUM.** A place at Athens, sacred to Minerva, where the poets and philosophers declaimed and recited their compositions. The most celebrated Athenæa were at Athens, Rome, and Lyons: that of Rome was of great beauty in its building, and was erected by the emperor Adrian, A. D. 125.—*Tillemont's Life of Adrian*.

**ATHENS.** The once celebrated capital of ancient Attica, whose magnificent ruins yet attest its former grandeur—the seat of science and theatre of valor. The first sovereign of whom we have any knowledge is Ogyges, who reigned in Boeotia, and was master of Attica, then called Ionia. In his reign a deluge took place (by some supposed to be no other than the universal deluge, or Noah's flood) that laid waste the country, in which state it remained two hundred years, until the arrival of the Egyptian Cecrops and a colony, by whom the land was repopled, and twelve cities founded, 1556 B. C. The first state of Athens was under seventeen kings, comprising a period of 487 years, but the history of its first twelve monarchs is mostly fabulous; in its second state it was governed by thirteen perpetual archons, a period of 316 years; in its third state by seven decennial archons, whose rule extended over 70 years, and, lastly, in its fourth state by annual archons, who ruled for 760 years. Under this democracy Athens became unrivalled, and her people signalized themselves by their valor, munificence, and culture of the fine arts; and perhaps not one other single city in the world can boast, in such a short space of time, of so great a number of illustrious citizens. The ancients, to distinguish Athens in a more peculiar manner, called it *Astus*, one of the eyes of Greece.—*Plutarch*. The Venetians got possession of Athens in A. D. 1204, and the Turks in 1687.—*Priestley*. It became the capital of Livadia, a province of European Turkey; and is now that of the new kingdom of Greece, and the seat of its legislature, established under King Otho I., January 25th, 1833.—See *Greece*. For events in the history of Athens, see *Tables* from B. C. 1556 to B. C. 21.

**ATMOSPHERE.** Posidonius first calculated the height of the atmosphere, stating it to be 800 stadia, nearly agreeing with our modern ideas, about 79 B. C. Its weight was determined by Galileo and Terricellius, about 1630; its density and elasticity by Boyle; and its relation to light and sound by Hooke, Newton, and Derham. The composition of the atmosphere was ascertained by Hales, Black, Priestley, Scheele, Lavoisier, and Cavendish; and its laws of refraction were investigated by Dr. Bradley, 1737.

**ATTAINDER, ACTS OF,** have been passed in numerous reigns: two witnesses in cases of high treason are necessary where corruption of blood is incurred, unless the party accused shall confess, or stand mute, 7 and 8 William III. 1694-5.—*Blackstone*. The attainder of Lord Russell, who was beheaded in Lincoln's-inn-Fields, July, 21, 1683, was reversed under William, in 1689. The rolls and records of the acts of attainder passed in the reign of king James II. were cancelled and publicly burnt, Oct. 2, 1695. Several acts were reversed in subsequent reigns. Among the last acts so reversed, not the least interesting was the attainder of the children of lord Edward Fitzgerald (who was implicated in the rebellion in Ireland of 1798), July 1, 1819.

**ATTILA**, surnamed the "*Scourge of God*," and thus distinguished for his conquests and his crimes, ravaged all Europe, A. D. 447. He invaded the Ro-

man empire with an army of 500,000 Huns, and laid waste all the provinces. He died on the night of his nuptials with a beautiful virgin named Ildico, about A. D. 453.—*Goldsmith*.

**ATTORNEY-GENERAL.** A great officer of the crown, appointed by letters patent. It is among his duties to exhibit informations and prosecute for the king in matters criminal; and to file bills in Exchequer, for any claims concerning the crown, in inheritance or profit; and others may bring bills against the king's attorney. The first Attorney-General was William de Gisilham, 7 Edward I. 1278.—*Beatson*.

**ATTORNEYS.** The number practising in Edward III.'s reign was under 400 for the whole kingdom. In the 32d of Henry VI. 1454, a law reduced the practitioners in Norfolk, Norwich, and Suffolk, from eighty to fourteen, and restricted their increase. The number of attorneys now practising in England, or registered, or retired, is about 13,000. The number sworn, and practising or retired in Ireland, is stated at 2000. A list of 19,527 "*practising lawyers*" in the United States is given in the *Lawyer's Directory*, 1850.

**ATTRACTION.** Copernicus described attraction as an appetence or appetite which the Creator impressed upon all parts of matter, about 1520. It was described by Kepler to be a corporeal affection tending to union, 1605. In the Newtonian philosophy, it is an original power which restores lost motion; a principle whereby all bodies mutually tend to each other.—See *Astronomy*.

**AUCTION,** a kind of sale known to the Romans. The first in Britain was about 1700, by Elisha Yale, a governor of Fort George, in the East Indies, of the goods he had brought home with him. Auction and sales' tax began, 1779.

**AUERSTADT, BATTLE OF.** In this most sanguinary conflict between the French and Prussian armies, they were commanded by their respective sovereigns, and Napoleon obtained a decisive victory. The Prussians were routed on every side, and lost 200 pieces of cannon, thirty standards, and 28,000 prisoners, leaving 50,000 slain upon the field, Oct. 14, 1806. The French emperor immediately afterwards entered Berlin, from whence he issued his memorable Berlin decree.—See *Berlin Decree*.

**AUGSBURG CONFESSION OF FAITH.** The confession of articles of faith drawn up at Augsburg by Melancthon, and by him and Luther presented to the emperor Charles V. in 1530. It was divided into two parts, the first consisting of twenty-one articles, and the second of seven, directly opposed to the abuses that had crept into the Church of Rome. The elector of Saxony, his son, and several other princes of Germany, signed this confession, which was delivered to the emperor in the palace of the bishop of Augsburg, and hence it is called the Confession of Augsburg.

**AUGSBURG, LEAGUE OF.** A memorable treaty concluded between Holland and other European powers, which had for its object the causing the treaties of Munster and Nimeguen to be respected, 1686.—See *Munster and Nimeguen*.

**AUGURY.** Husbandry was in part regulated by the coming or going of birds, long before the time of Hesiod. Augurs instituted at Rome, with vestals and several orders of the priesthood, by Numa, 710 B. C. There was a community of them, appointed to foretell events by the flight of birds, and other circumstances. The king Car, from whom Caria in Asia Minor is named, was the inventor of augury by birds.—*Vossius*. The augurs of Rome drew omens from the phenomena of the heavens, the chirping and flight of birds, and various strange casualties.—*Livy*.

**AUGUST.** The eighth month of the year. It was dedicated to the honor of Augustus Cæsar, from whom it was named in the year 8 B. C., because in this month he was born, was created consul, or chief magistrate, thrice

triumphed in Rome, subdued Egypt to the Roman empire, and made an end of the civil wars. It was previously called *Sextilis*, or the sixth from March.

**AUSTERLITZ, BATTLE OF**, between the French and Austrian armies, gained by the former. Three emperors commanded at this battle, Alexander of Russia, Francis of Austria, and Napoleon of France. The killed and wounded exceeded 40,000 on the side of the allies, who lost, besides, forty standards, 150 pieces of cannon, and many thousands of prisoners. This decisive victory of the French led to the treaty of Presburg, which was signed Dec. 26, same year. The battle was fought Dec. 2, 1805. See *Presburg*.

**AUSTRALASIA**, includes New Holland, Van Diemen's Land, New Guinea, New Britian, New Zealand, &c., mostly discovered within two centuries. Of a population of twenty-two millions, the native inhabitants are not supposed to exceed one hundred thousand. Several settlements from Europe have been made since the commencement of the present century. Act to provide for the government of Western Australia, 10 George IV. 1829. Act to erect South Australia into a British province, 4 and 2 William IV. 1834. New act, 5 and 6 William IV. 1835. Several companies and institutions connected with Australia have lately been formed in London.

**AUSTRIA**, anciently the Belgic Gaul of the Romans. It was taken from Hungary and annexed to Germany, when it received its present name, about A. D. 1040. This was after Charlemagne had re-established the Western Empire, Austria being a part of what was called Eastern France, which its name in the German language implies.

Rodolphi, count of Hapsburg, seizes Austria from Bohemia, and makes himself archduke - 1273

Revolt of Switzerland from the house of Austria, in the reign of Albert I. - 1307

Albert II. duke of Austria, succeeds to three crowns—the imperial, and those of Hungary and Bohemia; his family still possess the empire, - 1438

Burgundy accrues to Austria by the marriage of Maximilian with the heiress of that province - 1477

Also Spain, by the marriage of Philip I. of Austria with the heiress of Aragon and Castile - 1496

Charles V., reigning over Germany, Austria, Bohemia, Hungary, Spain, the Netherlands, and their dependencies, abdicates, and retires from the world, leaving his German dominions to his brother Ferdinand, and Spain and the Netherlands to his son, Philip II.—See *Spain* - 1557

The Protestant princes of Germany, being oppressed by the house of Austria, call in the aid of Gustavus Adolphus of Sweden, and this leads to the treaty of Westphalia - 1648

Leopold I. reigns.—See *Germany* - 1658

Accession of Francis, duke of Lorraine, who marries the celebrated queen of Hungary, Maria Theresa, daughter of the deceased emperor, Charles VI. - 1745

Reign of Joseph II. - 1765

Religious toleration granted - 1776

The emperor controls the pope - 1782

Reign of Leopold II. - 1790

Reign of Francis II. - 1792

Austria becomes a distinct empire, and Francis II. of Germany takes the title of I. of Austria - Aug. 9, 1804

The emperor issues his declaration against France - Aug. 5, 1805

Napoleon, after many victories, enters Vienna - Nov. 14, 1805

Vienna evacuated by the French, Jan. 12, 1806

They again capture it - May 13, 1809

But restore it at the peace - Oct. 24, 1809

Napoleon marries the archduchess Maria Louisa, the daughter of the emperor - April 1, 1810

Congress at Vienna - Oct. 2, 1814

Treaty of Vienna - Feb. 25, 1815

Death of Francis I., and accession of Ferdinand - March 2, 1835

New treaty of commerce with England - July 3, 1838

Ferdinand is crowned with great splendor at Milan - Sept. 6, 1838

Tumult at Vienna, agitation for reforms; Metternich resigns and flies; freedom of the press and national guard granted by the emperor - March 13, 1848

The emperor publishes, at Milan, abolition of the censorship and convention of the states; the people demand more, and are refused - March 18, “

Milan revolts, and contends successfully with the soldiery - March 23, “

Austrians retire to Mantua; Milan entered by Charles Albert of Sardinia - March 23, “

Lombardy and the Tyrol in rebellion - March, “

The emperor retires to Innsbruck - May 18, “

Austrian army under Radetsky holds in check Charles Albert of Sardinia, in Lombardy - May — “

Is defeated and driven to Mantua May 23, “

AUSTRIA, *continued.*

Diet of the Croatian-Slavonic nation  
summoned by the Ban of Croatia

May 20, 1848

Insurrection at Rome; order re-esta-  
blished after bombardment, June 12-15

Vicenza and Padua subdued by Ra-  
detsky June

Milan retaken Aug. 4,

The emperor returns to Vienna " 12,

Insurrection at Vienna; Count Latour,  
minister of war, killed by the mob;  
the diet demands the retraction of the  
measures against Hungary, and a  
new ministry; the emperor flies

Oct. 6,

The Hungarian army advanced within  
six miles of Vienna Oct. 11,

Prince Windischgratz appointed com-  
mander-in-chief, Oct. 16; and be-  
siegues Vienna, 17th; bombards the  
city and masters it Nov. 2,

Ferdinand I. abdicates; his brother,  
Francis Charles, declines the throne;  
it is taken by his son, Francis Joseph

Dec. 2, 1848

The emperor gives a new constitution  
March 4-6, 1849

Haynau takes Brescia, after great

slaughter, and sacks it March 30,

Bologna taken, after a siege of 8 days

May 16,

Haynau takes command of the Aus-  
trian army in Hungary June —,

Ancona taken, after bombardment

June 11,

Venice taken by Radetsky Aug. 23,

Hungarian war finished by the surren-  
der of Görgey Aug. 11,

Followed by numerous executions.

See *Germany, Vienna, &c.*

Before the establishment of the Confederation of the Rhine in 1806, Francis ceased to be emperor of Germany, and became hereditary emperor of Austria, under the title of Francis I. Upon the formation of the Germanic Confederation in 1815, the emperor of Austria was declared hereditary head of that body.

**AUTHORS.** For laws securing copyright, see *Copyright and Literary Property.*

**AUTO DA FE.** See *Inquisition.* The punishment, often by burning alive, of a heretic. This is called an act of Faith, and is coeval with the Inquisition; and since its first practice in A. D. 1203, more than one hundred thousand victims have been sacrificed by the sentence of the Inquisitions of Roman Catholic countries on the burning pile. One of the last executions of this kind was at Goa, where, for the glory of the Christian religion (!) and in vindication of the Catholic faith, twenty sufferers perished in the flames, 1787. These horrible sacrifices have ceased in Spain.—*Ashe.*

**AVIGNON,** ceded by Philip III. of France to the Pope in 1273. The papal seat was removed for seventy years to Avignon, in 1308. It was seized several times by the French, by whom it was taken from the pope in 1769, but was restored on the suppression of the Jesuits, 1773. Declared to belong to France by the National Assembly, 1791. Horrible massacres in October of that year. Continued to France by the Congress of sovereigns, in 1815.

**AXE, WEDGE, WIMBLE, &c.** These instruments, with the lever, and various others of a coarse construction, and still in common use, are said to have been invented by Dædalus, an artificer of Athens, to whom also is ascribed the invention of masts and sails for ships, 1240 B. C.

**AZORES, or WESTERN ISLES,** supposed to be the site of the ancient Atalantis; they were discovered by Vandenburg, A. D. 1439; and were settled by the Portuguese, in 1448. Martin Behem found one of them covered with beech-trees, and he called it therefore *Fayal*; another abounding in sweet flowers, and he therefore called it *Flores*; and all full of hawks, and he therefore named them the Azores. A violent concussion of the earth took place here for twelve days, in 1591. A devastating earthquake, in 1757. Here are fountains of boiling water. A volcano at St. George's destroyed the town of Ursulina, May, 1808; and in 1811, a volcano appeared near St. Michael's in the sea, where the water was eighty fathoms deep. An island called Sabrina gradually disappeared, Dec. 1812.

## B.

**BABEL**, THE TOWER OF, built by Noah's posterity, 2247 B.C. The temple of Belus, originally this celebrated tower, was the most magnificent in the world; it had lofty spires, and was enriched with many statues of gold, one of them forty feet high. In the upper part of this temple was the tomb of the founder, Belus (the Nimrod of the sacred Scriptures), who was deified after death; and in an adjoining apartment was a magnificent bed, whither the priests daily conducted a female, who, as they pretended, was there honored with the company of the god.—*Blair*.

**BABINGTON'S CONSPIRACY**, formed in the cause of Mary against Elizabeth, for which the chief conspirator, with thirteen others, suffered death. Babington was a gentleman of Derbyshire, and he associated with persons of his own persuasion (the Roman Catholic), with a design to assassinate the queen, and deliver Mary. He seems to have been principally induced to this rash conspiracy by a romantic hope that Mary, in gratitude, would accept of him as a husband. 1586.

**BABYLON**, EMPIRE OF, founded by Belus, supposed to be the Nimrod of holy writ, the son of Chus, and grandson of Ham, 2245 B.C.—*Lenglet*. Ninus of Assyria seized on Babylon, and established what was properly the Assyrian empire, by uniting the two sovereignties, 2059 B.C. According to Eusebius this empire existed 1240 years; according to Justin, 1300 years; according to Herodotus, 500 or 600 years. Of these opinions Blair has adopted the first, which calculates from the foundation of the empire by Ninus, B.C. 2059, to the close of the reign of Sardanapalus, who was dethroned by his generals, and his kingdom divided into the Assyrian, Babylonian, and Median kingdoms, 820 B.C.—See *Assyria*.

|                                                                                                                                          |            |                                                                       |            |

|                                                                                                                                          |            | Taken by Darius.— <i>Usher</i>                                        | - 511      |

The city of Babylon was, anciently, the most magnificent in the world; and in later times famous for the empire established under the Seleucidæ. Its greatness was so reduced in succeeding ages, that Pliny says, in his time it was but a desolate wilderness; and at present the place where it stood is scarcely known to travellers.—*Rollin's Ancient Hist.*

**BACCHANALIA**, games celebrated in honor of Bacchus. They arose in Egypt, and were brought into Greece by Melampus, and were there called *Dionysia*, about 1415 B.C.—*Diodorus*. They were celebrated in Rome under the name of *Bacchanalia*.

**BACHELORS**. The Roman censors frequently imposed fines on unmarried men; and men of full age were obliged to marry. The Spartan women at certain games laid hold of old bachelors, dragged them round their altars, and inflicted on them various marks of infamy and disgrace.—*Vossius*. After twenty-five years of age, a tax was laid upon bachelors in England, 12l. 10s. for a duke, and for a common person, one shilling, 7 William III. 1695. Bachelors were subjected to a double tax on their male and female servants, in 1785.

**BACKGAMMON**. Palamedes of Greece is the reputed inventor of this game (decidedly one of the oldest known to our times), about 1224 B.C. It is

stated by some to have been invented in Wales in the period preceding the Conquest.—*Henry*.

**BADAJOS, SIEGE OF.** This important barrier fortress had surrendered to the French, March 11, 1811, and was invested by the British under lord Wellington on March 18, 1812, and stormed and taken on April 6, following. This victory was not only a glorious military achievement in itself, but it obliged the French, who had entered Portugal for the purpose of plunder, to commence a precipitate retreat from that kingdom.

**BADEN, HOUSE OF,** descended from Herman, son of Berthold I. duke of Zahringen, who died A. D. 1074. From Christopher, who united the branches of Hochberg and Baden, and died in 1527, proceed the branches of Baden-Baden, and Baden-Dourlach. This family makes a most conspicuous figure in the annals of Germany, and is allied to all the principal families in the empire.

**BADEN, TREATY OF,** between France and the emperor, when Landau was ceded to the former, Sept. 7, 1714. Baden was formerly a margravate; it was erected into a grand duchy, as a member of the Rhenish Confederation, in 1806. Its territorial acquisitions by its alliances with France, were guaranteed by the congress of Vienna, in 1815. The grand Duke granted his people freedom of the press, a burgher guard, trial by jury, and the right of public meeting, Feb. 29. Troops revolt at Rastadt, May, 1849. Insurrection at Carlsruhe;—the grand Duke flees, May 13, 1849. Insurrection subdued by the Prussians, June, 1849.

**BAFFIN'S-BAY,** discovered by William Baffin, an Englishman, in 1616. The nature and extent of this discovery were much doubted until the expeditions of Ross and Parry proved that Baffin was substantially accurate in his statement. These voyagers returned home in 1818. See article *North West Passage*.

**BAGDAD,** built by Almansor, and made the seat of the Saracen empire, A. D. 762—taken by the Tartars, and a period put to the Saracen rule, 1258. It has since been often taken by the Persians, and from them again by the Turks.—*Blair*.

**BAGPIPE.** This instrument is supposed by some to be peculiar to Ireland and Scotland; but it must have been known to the Greeks, as, on a piece of Grecian sculpture of the highest antiquity, now in Rome, is represented a bagpiper dressed like a modern highlander. Nero is said to have played upon a bagpipe, A. D. 51.

**BAHAMA ISLES.** These were the first points of discovery by Columbus. San Salvador was seen by this great navigator on the night of the 11th October, 1492.—The Bahamas were not known to the English till 1667. Seized for the crown of England, 1718, when the pirates who inhabited them surrendered to Captain Rogers.

**BAIL.** By ancient common law, before and since the Conquest, all felonies were bailable, till murder was excepted by statute; and by the 3d Edward I. the power of bailing in treason, and in divers instances of felony, was taken away, 1274. Bail was further regulated, 23 Henry VI.; 2 Philip and Mary, and in later reigns.

**BAILIFFS OR SHERIFFS,** are said to be of Saxon origin. London had its *shire-reve* prior to the Conquest, and this officer was generally appointed for counties in England in 1079. Sheriffs were appointed in Dublin under the name of bailiffs, in 1308; and the name was changed to sheriff, 1548. There are still some places where the chief-magistrate is called bailiff, as the high bailiff of Westminster. The term *Bum-bailiff* is a corruption of bound-bailiff, every bailiff being obliged to enter into bonds of security for his good behavior.—*Blackstone*.

**BALANCE OF POWER**, to assure the independency and integrity of states, and control ambition; the principle is said to be a discovery of the Italian politicians of the fifteenth century, on the invasion of Charles VIII. of France—*Robertson*. By the treaty of Munster, the principle of a balance of power was first recognized by treaty October 24, 1648.

**BALLADS**. They may be traced in British history to the Anglo-Saxons.—*Turner*. Audhelme, who died A. D. 709, is mentioned as the first who introduced ballads into England. "The harp was sent round, that those might sing who could."—*Bede*. Alfred sung ballads.—*Malmsbury*. Canute composed one.—*Turner*. Minstrels were protected by a charter of Edward IV.; but by a statute of Elizabeth they were made punishable among rogues, vagabonds, and sturdy beggars.—*Viner*.

**BALLADS, NATIONAL**. "Give me the writing of the ballads, and you may make the laws."—*Fletcher of Saltoun*. A British statesman has said, "Give me the writing of the ballads of the country, and while I place at your command every other species of composition, I will fix public opinion, and rule public feeling, and sway the popular sentiment, more powerfully than all your writers, political and moral, can do by any other agency or influence." The beautiful and frequently touching ballads of Dibdin, particularly those of the sea, inspired many a brave defender of his country in the late war; Dibdin died Jan. 20, 1833.

**BALLETs**. They arose in the meretricious taste of the Italian courts. One performed at the interview between Hen. VIII. of Eng. & Francis I. of France, in the field of the Cloth of Gold, 1520.—*Guicciardini*. In the next century, they reached the summit of their glory in the splendid pomps of the courts of Tuscany and Lorraine; and their most zealous patron, Louis XIV., bore a part in one, 1664.

**BALLOON**. Galien of Avignon wrote on aerostation, in 1755. Dr. Black gave the hint as to hydrogen, in 1767. A balloon was constructed in France by MM. Montgolfier, in 1783, when Rozier and the marquis d'Arlandes ascended at Paris. Pilatre Desrozier and M. Romain perished in an attempted voyage from Boulogne to England, the balloon having taken fire, June 14, 1785. At the battle of Fleurus, the French made use of a balloon to reconnoitre the enemy's army, and convey the observations by telegraph, June 17, 1794. Garnerin ascended in a balloon to the height of 4,000 feet, and descended by a parachute, Sept. 21, 1802. Gay-Lussac ascended at Paris to the height of 23,000 feet, Sept. 6, 1804. Madame Blanchard ascended from Tivoli at night, and the balloon, being surrounded by fire-works, took fire, and she was precipitated to the ground, and killed, July 6, 1819.

**BALLOON, THE NASSAU**. The great Nassau balloon, of immense dimensions, and which had for some time previously been exhibited to the inhabitants of London in repeated ascents from Vauxhall gardens, started from that place on an experimental voyage, having three individuals in the car, and, after having been eighteen hours in the air, descended at Weilburg, in the duchy of Nassau, Nov. 7, 1836.

**BALTIMORE**, the third city in population and fifth in commerce in the United States; founded 1729; named from lord Baltimore, the proprietor of the Maryland patent. In 1765 it contained but 50 houses; chartered as a city in 1797. Population in 1790, 13,503; in 1810, 35,583; in 1830, 80,625; in 1840, 102,313, including 3,199 slaves. A handsome monument in the city commemorates its successful defence against the attack of the British under general Ross, Sept. 12, 1814.

**BALTIMORE, BATTLE OF**, between the British army under general Ross and the Americans; the British in making an attack upon the town were unsuc-

cessful, and after a desperate engagement were repulsed with great loss; the gallant general who led the enterprise was killed, Sept. 12, 1814.

**BANK.** The first established was in Italy, A. D. 803, by the Lombard Jews, of whom some settled in Lombard-street, London, where many bankers still reside. The name bank is derived from *banco*, a bench, which was erected in the market-place for the exchange of money. The mint in the tower of London was anciently the depository for merchants' cash, until Charles I. laid his hands upon the money, and destroyed the credit of the mint, in 1640. The traders were thus driven to some other place of security for their gold, which, when kept at home, their apprentices frequently absconded with to the army. In 1645, therefore, they consented to lodge it with the goldsmiths in Lombard-street, who were provided with strong chests for their own valuable wares; and this became the origin of banking in England.—

**BANK OF ENGLAND,** (See *preceding article*,) originally projected by a merchant named Patterson. It was incorporated by William III. in 1694, in consideration of 1,200,000*l.*, the then amount of its capital, being lent to government. The capital has gone on increasing from one period to another up to the present time, as the discretion of parliament allowed; and the same authority has also at different intervals prolonged the privileges of the bank, and renewed its charter. When first established the notes of the bank were at 20 per cent. discount; and so late as 1745, they were under par. Bank bills were paid in silver, 1745. The first bank post-bills were issued 1754; small notes were issued 1759; cash payments were discontinued February 25, 1797, when notes of *one* and *two* pounds were put into circulation. Silver tokens appeared in January, 1798; and afterwards Spanish dollars, with the head of George III. stamped on the neck of Charles IV., were made current. Cash payments were resumed partially, Sept. 22, 1817, and the restriction had altogether ceased in 1821. For a number of years the financial measures of the crown have been largely aided by loans from this great reservoir of wealth. The average amount of the Bank of England notes in circulation is as follows:—

|                                      |            |                   |             |
|--------------------------------------|------------|-------------------|-------------|
| In 1718 (earliest account) . . . . . | £1,829,930 | In 1815 . . . . . | £26,803,520 |
| 1778 . . . . .                       | 7,030,680  | 1820 . . . . .    | 27,174,000  |

| 1810 . . . . .                       | 23,904,000 | 1840 . . . . .    | 17,231,000  |

The circulation of notes, in 1845, exceeded 27 millions, and the bullion in the bank fluctuated between 15 and 16 millions. The returns of issues, &c. are now made weekly. To secure the credit of the Bank it was enacted, "that no other banking company should consist of more than six persons," 6 Anne 1707. There are branch banks of the Bank of England in many of the chief towns of the kingdom; as Birmingham, Bristol, Exeter, Gloucester, Hull, Leeds, Liverpool, Manchester, Newcastle, Norwich, Swansea, &c., all formed since 1823. See *Funds*.

**BANK OF THE UNITED STATES,** first one established 1791. Cap. \$10,000,000. —A new one with cap. of \$35,000,000, 1816. The act of Congress rechartering it vetoed by president Jackson, July 10, 1832. The "removal of the deposits" of the U. S. government from the bank, by order of president Jackson, signed by R. B. Taney, secretary of the Treasury, (W. J. Duane the late secretary having refused to sign the order,) Sept. 23, 1833. Resolution of the Senate that the removal was uncalled for, and the responsibility assumed by the president unconstitutional, &c., introduced by Mi

Webster and passed (26 to 20) March 28, 1834. Senate refused to enter on their journal the president's protest against their resolution, May 7, 1834. Noted resolution of the Senate "expunging" from their journals their resolution of 1834, passed 24 to 19, Jan. 16, 1837.—Sub-Treasury Bill passed Jan. 1840, repealed Aug. 9, 1841. The U. S. Bank newly incorporated by Pennsylvania, March 29, 1836: suspended payment Feb. 5, 1841. Bill for establishing a "Fiscal Bank of the U. S." passed the House of Representatives Aug. 6, 1841; vetoed by president Tyler Aug. 16. Another bill for a "Fiscal Corporation" vetoed Sept. 9, 1841, followed by a resignation of all the Cabinet, except Mr. Webster.

**BANKRUPTCY.** Suspension of specie payments by the banks of New England and New-York, May 10—16, 1837;—legalized for one year by legislature of N. Y. Banks of Philadelphia, Baltimore, &c., also suspended same month. General bankruptcy law passed by Congress Aug. 9, 1841.

**BANKRUPTS, IN ENGLAND,** first law enacted regarding them, 35 Henry VIII. 1543. Again, 3 of Elizabeth, 1560; again, 1 James I. 1602; again, 1706; and more recently. It was determined by the King's Bench that a bankrupt may be arrested except in going and coming from any examination before the commissioners, May 13, 1780. The lord chancellor (Thurlow) refused a bankrupt his certificate because he had lost five pounds at one time in gaming, July 17, 1788. Enacted that members of the house of commons becoming bankrupts, and not paying their debts in full, shall vacate their seats, 1812. The new bankrupt bill, constituting a new bankrupt court, passed October 1831.—*Statutes at Large*.

NUMBER OF BANKRUPTS IN GREAT BRITAIN AT DIFFERENT PERIODS.

|      |   |   |   |     |      |   |   |      |      |   |   |      |
|------|---|---|---|-----|------|---|---|------|------|---|---|------|
| 1700 | - | - | - | 38  | 1800 | - | - | 1339 | 1830 | - | - | 1467 |
| 1725 | - | - | - | 416 | 1810 | - | - | 2000 | 1835 | - | - | 954  |
| 1750 | - | - | - | 432 | 1820 | - | - | 1353 | 1840 | - | - | 1308 |
| 1775 | - | - | - | 520 | 1825 | - | - | 2683 | 1844 | - | - | 1064 |

According to a return to parliament made at the close of February 1826, there had become bankrupt *in the four months preceding*, 59 banking-houses, comprising 144 partners; and 20 other banking establishments had been declared insolvent. Every succeeding week continued to add from seventy to a hundred merchants, traders, and manufacturers to the bankrupt list. This was, however, the period of bubble speculation, and of unprecedented commercial embarrassment and ruin.

**BANNOCKBURN, BATTLE OF,** between king Robert Bruce, of Scotland, and Edward II. of England; the army of Bruce consisted of 30,000 Scots, and that of Edward of 100,000 English, of whom 52,000 were archers. The English crossed a rivulet to the attack, and Bruce having dug pits, which he had covered, they fell into them, and were thrown into confusion. The rout was complete, the king narrowly escaping, and 50,000 English were killed or taken prisoners, June 25, 1314.—*Barbour*.

**BANNS.** In the feudal law, banns were a solemn proclamation of any thing, and hence arose the custom of asking banns, or giving notice before marriage. The use of matrimonial banns is said to have been introduced into the Gallican church, about A. D. 1210; and banns of marriage are proclaimed in the church of England to this day.

**BAPTISM.** The sacrament of admission instituted by Christ and practised by all sects professing Christianity, except Quakers. St. John, the forerunner of our Saviour, is eminently called *the Baptist*, as being the first that publicly baptized with a spiritual intention. Christ came from Galilee to Jordan, and was baptized by John, A. D. 30. Originally the people were baptized in rivers; but in the reign of Constantine, A. D. 319, in great cities they built chapels, or places specially to baptize in, which in the eastern countries was

by dipping the person all over. Now, in the western and colder parts, they use sprinkling; at first every church had not a baptistery belonging to it; our fonts answer the same end.—*Pardon.*

**BAPTISTS**, or **ANABAPTISTS**, a sect distinguished from other Christians by their opinions respecting baptism, began their doctrine about A. D. 1525, but much earlier dates are mentioned. They suffered much persecution in England in the sixteenth century. Rhode Island, America, was settled by Baptists in 1635. Of Baptist missions, it may be said, that the Moravian brethren led the way to their benevolent enterprises, about 1732.—See *Anabaptists*.

**BARBADOES**, the first English settlement in the West Indies. This mother plantation gave rise to the sugar trade in England about 1605; and was, with other Caribbee islands, settled by charter granted to the earl of Marlborough, 2 Charles I. 1627. Barbadoes has suffered severely from elemental visitations: in a dreadful hurricane in 1780, more than 4000 of the inhabitants lost their lives. A large plantation with all its buildings was destroyed, by the land removing from its original site to another, and covering every thing in its peregrination, Oct. 1784. An inundation, Nov. 1795; and two great fires, May and Dec. 1796. Awful devastation, with the loss of thousands of lives, and of immense property, by a hurricane, August 10, 1831. The history of *Inkle and Yarico*, which Addison, in his *Spectator*, has recorded for the detestation of mankind, took its rise in this island.

**BARBER**. This trade was practised at Rome in the third century B. C. In England, barbers formerly exhibited a head, or *pole*, at their doors; and the barber's *pole* until lately used by them was a burlesque imitation of the former sign.

**BARBER-SURGEONS**. Formerly the business of a surgeon was united to that of a barber, and he was denominated a barber-surgeon. A company was formed under this name in 1308, and the London company was incorporated, 1st Edward IV. 1461. This union of profession was dissolved by a statute of Henry VIII.

**BARDS**. The profession of bard appeared with great lustre in Gaul, Britain, and Ireland. Demodocus is mentioned as a bard by Homer; Alexander the Great had a bard named Cherylus; and we find bards, according to Strabo, among the Romans before the age of Augustus. The druids among the English were philosophers and priests, and the bards were their poets. They were the recorders of heroic actions, in Ireland and Scotland, almost down to our own times. Ossian flourished in the third century, Merlin in the fifth. The former speaks of a prince who kept a hundred bards. Irish sonnets are the chief foundations of the ancient history of Ireland.—See *Ballads*.

**BARNET, BATTLE OF**, between the houses of York and Lancaster, when Edward IV. gained a decisive and memorable victory over the earl of Warwick, Easter-day, April 14, 1471.—*Brooks*.

**BAROMETERS**. Torricelli, a Florentine, having discovered that no principle of suction existed, and that water did not rise in a pump owing to nature's abhorrence of a vacuum, imitated the action of a pump with mercury, and made the first barometer, in 1643, and Descartes explained the phenomenon. Wheel barometers were contrived in 1668; pendant barometers in 1695; marine in 1700.

**BARONS**. The dignity of baron is extremely ancient: its original name in England was *Vavasour*, which, by the Saxons was changed into *Thane*, and by the Normans into *Baron*. Many of this rank are named in the history of England, and undoubtedly had assisted in, or had been summoned to parliament; but such is the deficiency of public records, that the first

precept to be found is of no higher date than the 49th Henry III., 1265. The first who was raised to this dignity by patent was John de Beauchamp, created Baron of Kidderminster, by Richard II., 1387. Barons first summoned to parliament, 1205. Took arms against king John, and compelled him to sign the great charter of our liberties, and the charter of the forests, at Runnymede, near Windsor, June 1215. Charles II. granted a coronet to barons on his restoration : they attended parliament in complete armor in the reign of Henry III.—*Bealson*.

**BARONETS**, the first among the gentry, and the only knighthood that is hereditary : instituted by James I., 1611. The baronets of Ireland were created in 1619. Baronets of Nova Scotia were created, 1625.

**BARRISTERS**. They are said to have been first appointed by Edward I. about 1291 ; but there is earlier mention of professional advocates in England. There are various ranks of barristers, as King's Counsel, Sergeants, &c.

**BARROW'S STRAITS**. Discovered by Parry, who penetrated as far as Melville Island, in lat. 74° 26' N., and long. 113° 47' W. The strait was entered on the 2d August, 1819. The lowest state of the thermometer was 55° below zero of Fahrenheit.

**BARTHOLOMEW, MASSACRE OF ST.** This dreadful massacre in France commenced at Paris on the night of the festival of St. Bartholomew, August 24, 1572. More than seventy thousand Hugonots, or French Protestants, were murdered throughout the kingdom, by secret orders from Charles IX., at the instigation of the queen-dowager, Catherine de Medicis, his mother. The massacre was attended with circumstances of demoniacal cruelty, even as regarded the female and the infant.

**BASTILE OF PARIS**. A royal castle, built by Charles V. king of France, in 1369, *et seq.* for the defence of Paris against the English, completed in 1383. It was afterwards used as a state prison, like the Tower of London, and became the scene of the most deplorable suffering and frightful crimes. It was of such strength that Henry IV. and his veteran army assailed it in vain in the siege of Paris, during the intestine war that desolated France between the years 1587 and 1594 ; yet it was pulled down by the infuriated populace, July 14, 1789, and thus was commenced the French revolution. On the capture of this great monument of slavery, the governor and other officers were seized, and conducted to the Place de Grève, and having had their hands cut off, they were then beheaded. The furious citizens having fixed their heads on pikes, carried them in triumph through the streets. "The man with the iron mask," the most mysterious prisoner ever known, died here, November 19, 1703.—See *Iron Mask*.

**BATAVIA**. The capital of Java, and of all the Dutch settlements in the East Indies, fortified by that people, 1618. Twelve thousand Chinese massacred here in one day, 1740. Taken by the English, January, 1782. Again, by the British, under general sir Samuel Auchmuty, to whom the garrison surrendered, Aug. 8, 1811.

**BATHS**, long used in Greece, and introduced by Mæcenæ into Rome. The thermæ of the Romans and gymnasia of the Greeks were sumptuous. The marble Laocœon was found in the baths of Titus, and the Farnese Hercules in those of Caracalla.—*Strabo*.

**BATTEL ROLL**. After the battle of Hastings, which decided the fate of England, and subjected it to the Norman yoke, a list was taken of William's chiefs, amounting to 629, and called the Battel-roll ; and among these chiefs the lands and distinctions of the followers of the defeated Harold were distributed, 1066.

**BATTLE, WAGER OF.** A trial by combat, formerly allowed by English laws, where the defendant in an appeal of murder might fight with the appellant, and make proof thereby of his guilt or innocence. In a case of appeal of murder, *Ashford v. Thornton*, before the King's Bench in London, April 1818, the court allowed that the law gave the defendant a right to his wager of battle; but the appellant, the brother of a lovely girl, whom Thornton had first violated and then murdered, not accepting the challenge, the murderer was discharged. A statute was immediately passed, putting an end to this mode of trial, 59 George III., 1819.—*Statutes at large*.

**BATTERING-RAM.** *Testudo Arietaria*, with other military implements, some of which are still in use, invented by Artemones, about 441 B. C. These ponderous engines by their own weight exceeded the utmost effects of our battering cannon.—*Desaguliers*. Sir Christopher Wren employed a battering-ram in demolishing the old walls of St. Paul's church, previously to rebuilding the new edifice in 1675.

**BATTLES.** Palamedes of Argos was the first who ranged an army in a regular line of battle, and placed sentinels round a camp, and excited the soldier's vigilance by giving him a watch-word.—*Lenglet*. The following are the principal and most memorable battles mentioned in general history, and are those also that are most commonly referred to:

|                                                               | B. C.                       |                                               | A. D.            |
|---------------------------------------------------------------|-----------------------------|-----------------------------------------------|------------------|
| Actium ( <i>the empire of Rome is confirmed to Augustus</i> ) | 31                          | Berwick                                       | 1378             |
| Arbela ( <i>Fall of Persia</i> )                              | 331                         | Bilboa ( <i>British legion</i> )              | Dec. 24, 1836    |
|                                                               | A. D.                       | Blackheath ( <i>Cornish Rebels defeated</i> ) | 1497             |
| Aboukir ( <i>Turks</i> )                                      | July 26, 1799               | Blackrock ( <i>Amer. &amp; Brit.</i> )        | Dec. 3, 1813     |

BAVARIA, HOUSE OF. The dukedom founded in the eleventh century: this house has the same origin as that of Saxony, and is a branch of the Guelphian family; Henry Guelph was made duke of Bavaria by Conrad II., emperor of Germany, who reigned in 1024. Otho, count Wittelsbach, was made duke in 1179; and Maximilian I. elector in 1624. Bavaria was

\* This battle and defeat of Charles put a period to the civil war in England.

N. B.—Many of the above battles are described more fully under each name.

erected into a kingdom by Bonaparte in December 1805; and obtained by the treaty of Presburg the incorporation of the whole of the Italian and German Tyrol, the bishopric of Anspach, and lordships in Germany. This kingdom joined the coalition against France in Oct. 1813. Bavarian chamber recommends freedom of the press, &c., by almost unanimous vote, Oct. 17, 1847. Riots at Munich on account of Lola Montes, the king's mistress, Feb. 9, 1848. Violent movement at Munich; the king abdicates in favor of his son, Maximilian II., March 22, 1848.

**BAYEUX TAPESTRY.** This important historical document was wrought by Matilda, the queen of William I., and represents the facts of the Conquest, from the signature of the will of the Confessor down to the crowning of William, 1066.—*Rapin*. This curious monument of antiquity embroidered by Matilda, is 19 inches wide, 214 feet long, and is divided into compartments showing the train of events, commencing with the visit of Harold to the Norman court, and ending with his death at Hastings; it is now preserved in the town-house of Rouen.—*Agnes Strickland*.

**BAYONETS.** The short sword or dagger fixed at the end of a musket. This weapon was invented at Bayonne, in France (whence the name), about 1670. According to the abbe Lenglet, it was first used in battle by the French, in 1603, "with great success against an enemy unprepared for the encounter with so formidable a novelty."

**BAZAAR, or COVERED MARKET.** The word is of Arabic origin. The bazaar of Ispahan is magnificent, yet it is excelled by that of Tauris, which has several times held 30,000 men in order of battle.

**BEADS.** The Druids appear to have used beads. They were early used by Dervises and other holy men of the East. They were in general use in Roman Catholic devotions, A. D. 1213. The bead-roll was a list of deceased persons for the repose of whose souls a certain number of prayers were recited, which the devout counted by a string of beads.—*Butler*.

**BEARDS.** Various have been the customs of most nations respecting them. The Tartars, out of a religious principle, waged a long and bloody war with the Persians, declaring them infidels, because they would not cut their beards after the rites of Tartary. The Greeks wore their beards till the time of Alexander, who ordered the Macedonians to be shaved lest the beard should give a handle to their enemies, 330 B. C. Beards were worn by the Romans, 297 B. C. They have been worn for centuries by the Jews. In England, they were not fashionable after the Conquest, A. D. 1066, until the thirteenth century, and were discontinued at the Restoration. The Russians, even of rank, did not cut their beards until within these few years; and Peter the Great, notwithstanding his enjoining them to shave, was obliged to keep officers on foot to cut off the beard by force.

**BEARDS ON WOMEN.** A bearded woman was taken by the Prussians at the battle of Pultova, and presented to the Czar, Peter I. 1724: her beard measured 1½ yards. A woman is said to have been seen in Paris with a bushy beard, and her whole body covered with hair.—*Dict. de Trévoux*. The great Margaret, governess of the Netherlands, had a very long stiff beard. In Bavaria, in the time of Wolfius, a virgin had a long black beard.

**BEAUVAIS, HEROINES OF.** On the town of Beauvais being besieged by Charles the Bold, duke of Burgundy, at the head of 80,000 men, the women under the conduct of Jeanne de la Hachette, or Laine, particularly distinguished themselves, and the duke was obliged to raise the siege, July 10, 1472. In memory of their noble exploits during the siege, the females of

Beauvais walk first in a procession on the anniversary of their deliverance—*Henault*.

**BECKET'S MURDER.** Thomas, archbishop of Canterbury, was murdered at the altar, Dec. 29, 1171. Four barons hearing Henry II. say, in a moment of exasperation, "What an unhappy prince am I, who have not about me one man of spirit enough to rid me of this insolent prelate," resolved upon Becket's assassination; and rushing with drawn swords into the cathedral of Canterbury, where he was at vespers, they announced their design, when he cried out, "I charge you, in the name of the Almighty, not to hurt any other person here, for none of them have been concerned in the late transactions." The confederates then strove to drag him from the church; but not being able to do so, on account of his resolute deportment, they killed him on the spot with repeated wounds, all which he endured without a groan. The bones of Becket were enshrined in gold and set with jewels, in 1220; and were taken up and burned in the reign of Henry VIII. 1539.—*Stowe*.

**BED.** The practice was universal in the first ages, for mankind to sleep upon the skins of beasts.—*Whittaker*. This was the custom of the early Greeks and Romans, and of the Britons, before the Roman invasion. They were afterwards changed for loose rushes and heather. Straw followed, and was used in the royal chambers of England so late as the close of the fifteenth century. The Romans were the first who used feathers.

**BEER.** See *Ale*. A beverage of this sort is made mention of by Xenophon, in his famous retreat, 401 B. C. Beer was drunk generally in England in the thirteenth century. By a law of James I., when there was a kind of duty paid on "*ale called bere*," one quart of the best thereof was to be sold for a penny. Subjected to excise in 1660. In England the number of retailers in 1834 amounted to about 60,000. See *Brewers*.

**BEES.** Mount Hybla, on account of its odoriferous flowers, thyme, and abundance of honey, has been poetically called the "empire of bees." Hymettus, in Attica, is also famous for its bees and honey. The economy of bees was admired in the earliest ages; and Eumelus, of Corinth, wrote a poem on bees, 741 B. C. There are 292 species of the bee, or *apis* genus, and 111 in England. Strange to say, bees were not originally natives of New England: they were introduced into Boston by the English, in 1670, and have since spread over the whole continent; the first planters never saw any.—*Hardie's America*.

**BEET-ROOT.** It is of recent cultivation in England. Margraff first produced sugar from the white beet-root, in 1747. M. Achard produced excellent sugar from it in 1799; and the chemists of France at the instance of Bonaparte, largely extracted sugar from the beet-root in 1800. A refinery of sugar from beet-root was lately erected at the Thames-bank, Chelsea.

**BEGUINES.** Nuns, first established at Liege, and afterwards at Nivelles, in 1207. The "Grand Beguinage" of Bruges is the most extensive of modern times.—Some of these nuns once fell into the extravagant error that they could, in this life, arrive at the highest moral perfection, even to impeccability. The council of Vienne condemned this error, and abolished the branch of the order in 1311.

**BEHEADING**—or *Decollatio* of the Romans, introduced into England from Normandy (as a less ignominious mode of putting high criminals to death) by William the Conqueror, 1074, when Waltheof, earl of Huntingdon, Northampton, and Northumberland, was first so executed.—*Salmon's Chron.* English history is filled with instances of this mode of execution, particu-

larly in the reigns of Henry VIII., and Mary, when even women of the noblest blood, greatest virtues, and most innocent lives, thus suffered death.\*

**BEHRING'S STRAIT.** Explored by a Danish navigator in the service of Russia whose name it bears. Behring thus established that the continents of Asia and America are not united, but are distant from each other about thirty-nine miles, 1728.

**BELGIUM.** Late the southern portion of the kingdom of the Netherlands, and anciently the territory of the Belgæ, who were conquered by Julius Cæsar, 47 B. C. Under the dominion of France so late as A. D. 1369; formed into a kingdom in 1831.

|                                                                                                           |                |                                                                                                                                                 |                |
|-----------------------------------------------------------------------------------------------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Became an acquisition of the house of Austria                                                             | 1477           | by the Allied Powers, announced by Van der Weyer                                                                                                | Dec. 26, 1830  |
| Charles V. annexed the Netherlands to the crown of Spain                                                  | 1556           | Duke de Nemours elected king; but his father, the king of France, refuses his consent                                                           | Feb. 3, 1831   |
| Seven provinces, under William, prince of Orange, revolt, owing to the tyranny of Philip II.; freed       | 1579           | M. Surlet de Chokier is elected regent of Belgium                                                                                               | Feb. 24, 1831  |
| The ten remaining provinces are given to the archduke                                                     | 1598           | Leopold, prince of Coburg, is elected king                                                                                                      | July 12, 1831  |
| These again fall to Spain                                                                                 | 1648           | He enters Brussels                                                                                                                              | July 19, 1831  |
| Seven again ceded to Germany                                                                              | 1714           | The king of the Netherlands recommences the war                                                                                                 | Aug. 3, 1831   |
| And three to France                                                                                       | 1748           | [France sends 50,000 troops to assist Belgium, and an armistice ensues.]                                                                        |                |
| Austrians expelled; but their rule afterwards restored                                                    | 1789           | A conference of the ministers of the five great powers is held in London, which terminates in the acceptance of the 24 articles of pacification | Nov. 15, 1831  |
| The French entered Belgium                                                                                | Nov. 1, 1792   | Leopold marries Louise, eldest daughter of Louis Philippe                                                                                       | Aug. 9, 1832   |
| United to France                                                                                          | Sept. 30, 1795 | The French army returns to France                                                                                                               | Dec. 27, 1832  |
| Placed under the sovereignty of the house of Orange                                                       | 1814           | Riot at Brussels (see <i>Brussels</i> ); much mischief ensues                                                                                   | April 6, 1834  |
| The revolution commences at Brussels                                                                      | Aug. 25, 1830  | Treaty between Holland and Belgium, signed in London                                                                                            | April 19, 1839 |
| The Provisional Government declares Belgium independent                                                   | Oct. 4, 1830   |                                                                                                                                                 |                |
| The Belgian troops take Antwerp; the Dutch are driven to the citadel, from whence they cannonade the town | Oct. 27, 1830  |                                                                                                                                                 |                |
| Belgian independence acknowledged                                                                         |                |                                                                                                                                                 |                |

This last treaty arose out of the conference held in London on the Belgian question; by the decision of which, the treaty of November 15, 1831, was maintained, and the pecuniary compensation of sixty millions of francs, offered by Belgium for the territories adjudged to Holland, was declared inadmissible.

**BELGRADE, BATTLE OF,** between the German and Turkish armies, in which the latter was defeated with the loss of 40,000 men, fought 1456. Belgrade was taken by Solymán, 1522; and re-taken by the Imperialists in 1688, from whom it again reverted to the Turks in 1690. Taken by prince Eugene in 1717 (see *next article*), and kept till 1739, when it was ceded to the Turks. It was again taken in 1789, and restored at the peace of Reichenbach, in 1790.

**BELGRADE, SIEGE OF.** The memorable siege, so often quoted, was undertaken in May, 1717, under prince Eugene. On August 5, of that year, the Turkish army, of 200,000, approached to relieve it, and a battle was fought, in which the Turks lost 20,000 men; after which Belgrade surrendered. Belgrade has been frequently besieged. See *Sieges*.

\* Among other instances (besides queens of England), may be mentioned the Lady Jane Grey, beheaded, Feb. 12, 1554; and the venerable countess of Salisbury—the latter remarkable for her resistance of the executioner. When he directed her to lay her head on the block, she refused to do it; telling him, that she knew of no guilt, and would not submit to die like a criminal. He pursued her round and round the scaffold, aiming at her hoary head, and at length took it off, after mangling the neck and shoulders of the illustrious victim in a horrid manner. She was daughter of George, duke of Clarence, and last of the royal line of Plantagenet. May 27, 1541.—*Hume*.

**BELL, BOOK, AND CANDLE**; an ecclesiastical ceremony of the Romish church, used in excommunication, *which see*.

**BELLES-LETTRES**, or **POLITE LEARNING**. We owe the revival of the belles lettres in Europe, after the darkness of previous ages to Brunetto, Latini and other learned men in different countries, about A. D. 1272.—*Gen. Hist.* Learning greatly promoted by the Medici family in Italy, about 1550.—*Fon tana*. Literature began to flourish in France, Germany, and England, about this time. The belles-lettres commenced in England in the reign of Elizabeth, and flourished in that of Anne.

**BELLOWS**. Anacharsis, the Scythian, is said to have been the inventor of them, about 569 B. C. To him is also ascribed the invention of tinder, the potter's wheel, anchors for ships, &c. Bellows were not used in the furnaces of the Romans.

**BELLS**. Used among the Jews, Greeks, Roman Catholics, and heathens. The responses of the Dodonæan oracle were in part conveyed by bells.—*Strabo*. The monument of Porsenna was decorated by pinnacles, each surmounted by bells.—*Pliny*. Introduced by Paulinus, bishop of Nole, in Campagna, about A. D. 400. First known in France in 550. The army of Clothair II., king of France, was frightened from the siege of Sens by the ringing of the bells of St. Stephen's church. The second Excerpton of our king Egbe commands every priest, at the proper hours, to sound the bells of his church. Bells were used in churches by order of pope John IX., *as a defence, by ringing them, against thunder and lightning*, about 900. First cast in England by Turketel, chancellor of England, under Edmund I. His successor improved the invention, and caused the first tunable set to be put up at Croyland abbey, 960.—*Stowe*.

|                                 |              |                         |               |
|---------------------------------|--------------|-------------------------|---------------|
| Great Bell of St. Pauls, weighs | - lbs. 8,400 | St. Peter's, at Rome    | - lbs. 18,66. |
| Great Tom of Lincoln            | - 9,894      | Great Bell at Erfurth   | - 28,224      |
| Great Tom of Oxford             | - 17,000     | St. Ivan's Bell, Moscow | - 127,573     |
| Bell of the Palazzo, Florence   | - 17,000     | Bell of the Kremlin     | - 443,712     |

The last is the great unsuspended bell, the wonder of travellers. Its metal, alone is valued, at a very low calculation, at £66,565 sterling. In its fusion great quantities of gold and silver were thrown in as votive offerings by the people.

**BELLS, BAPTISM OF**. They were early anointed and baptized in churches.—*Du Fresnoy*. The bells of the priory of Little Dunmow, in Essex, were baptized by the name of St. Michael, St. John, Virgin Mary, Holy Trinity, &c., in 1501.—*Weever*. The great bell of Notre Dame, in Paris, was baptized by the name of Duke of Angoulême, in 1816. On the Continent, the Catholic states, they baptize bells as we do ships, but with religious solemnity.—*Ashe*.

**BENEDICTINES**. An order of monks founded by Benedict, who was the first that introduced the monastic life into the western part of Europe, in the beginning of the sixth century. No religious order has been so remarkable for extent, wealth, and men of note, as the Benedictine. It spread over a large portion of Europe, but was superseded in the vast influence it possessed over other religious communities, about A. D. 1100. The Benedictines appeared early in England; and William I. built them an abbey on the plain where the battle of Hastings was fought, 1066.

William de Warrenne, earl of Warren, built them a convent at Lewes, in Essex, in 1077. At Hammersmith is a nunnery, whose inmates are denominated Benedictine dames.—*Leigh*. Of this order, it is reckoned that there have been 40 popes, 200 cardinals, 50 patriarchs, 116 archbishops, 4600 bishops, 4 emperors, 12 empresses, 46 kings, 41 queens, and 3600 saints. Their founder was canonized.—*Baronius*.

**BENEFICES.** Clerical benefices originated in the twelfth century; till then the priests were supported by alms and oblations at mass. All that should become vacant in the space of six months were given by pope Clement VII. to his nephew, in 1534.—*Notitia Monastica*. The number of benefices in England, according to parliamentary returns, is 10,533, and the number of glebe-houses 5,527; these are exclusive of bishoprics, deaneries, canonries, prebendaries, priest-vicars, lay-vicars, secondaries, and similar church preferments. The number of parishes is 11,077, and of churches and chapels about 12,000. The number of benefices in Ireland is 1456, to which there are not more than about 900 glebe-houses attached, the rest having no glebe-houses.—See *Church of England*.

**BENEFIT OF CLERGY.** A privilege first enjoyed only by clergymen, but afterwards extended to lettered laymen, relating to divers crimes, and particularly manslaughter. The ordinary gave the prisoner at the bar a Latin book, in a black Gothic character, from which to read a verse or two; and if the ordinary said "*Legit ut clericus*," the offender was only burnt in the hand, otherwise he suffered death, 3 Edward I., 1274. This privilege was abolished with respect to murderers and other great criminals, as also the claim of sanctuary, by Henry VIII., 1513.—*Stowe*. Benefit of clergy was wholly repealed by statute 7 and 8 George IV., June 1827.

**BENEVOLENT INSTITUTIONS, PUBLIC CHARITIES, &c., IN THE UNITED STATES.** The known voluntary contributions by citizens of Boston alone, during 45 years, ending 1845, was ascertained to be (see details in American Almanac, 1846) as follows:

|                                                       |             |                                                    |             |
|-------------------------------------------------------|-------------|----------------------------------------------------|-------------|
| For theological education and other religious objects | \$1,054,966 | For miscellaneous objects (such as monuments, &c.) | 433,321     |
| For purposes of instruction                           | 1,095,594   |                                                    |             |
| For charitable purposes                               | 2,162,412   | Total                                              | \$4,751,293 |

[Exclusive of the contributions in churches, for the poor, &c. The population of Boston, in 1800, was about 25,000; in 1845, about 114,000. Few cities can boast of such munificence, in proportion to the number of inhabitants.]

**BENEVOLENT SOCIETIES**—some of the principal in the United States.

|                                      | Formed. | Income.   |                             | Formed. | Income.  |
|--------------------------------------|---------|-----------|-----------------------------|---------|----------|
| Amer. Board of Com. Foreign Missions | 1810    | \$260,897 | Amer. Education Society     | 1816    | \$32,754 |
| Amer. Sunday Sch. Union              | 1824    | 207,764   | " Colonization Society      | 1819    | 17,414   |
| " Bible Society                      | 1816    | 284,514   | " Seamen's Friend Society   |         | 23,497   |
| " Tract Society                      | 1814    | 308,423   | Miss. Soc. Methodist Church | 1819    | 99,635   |
| " Home Miss. Society                 | 1826    | 157,460   | Presbyterian Board Missions |         | 126,013  |

United States ship, Jamestown, sailed from Boston for Cork, loaded with provisions, to be given to the destitute Irish, March 28th, 1847. The frigate Macedonian sailed from New York on same errand, July 8, 1847.

Abbott Lawrence gave \$50,000 to Harvard College, for scientific department, June, 1847.

**BENGAL.** Of the existence of Bengal as a separate kingdom, there is no record. It was ruled by governors delegated by the sovereigns of Delhi in 1340, when it became independent, until 1560. It afterwards fell to the Mogul empire.—See *India*.

|                                                                            |            |                                                                                                                             |               |
|----------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------|---------------|

See *India*.

**BERESINA, BATTLE OF.** Total defeat of the French main army by the Russians on the banks of the Beresina, followed by their disastrous passage of it when escaping out of Russia. The French lost 20,000 men in the battle; and in their retreat the career of their glory was closed, Nov. 28, 1812.

**BERGEN, BATTLE OF,** between the French and allies, the latter defeated, April 14, 1759. The allies again defeated by the French with great loss, Sept. 19, 1799. In another battle, fought Oct. 2, same year, the allies lost 4,000 men; and on the 6th, they were again defeated before Alkmaer, losing 5,000 men. On the 20th, the duke of York entered into a convention by which he exchanged his army for 6,000 French and Dutch prisoners in England.

**BERGEN-OP-ZOOM,** whose works were deemed impregnable, taken by the French, Sept. 16, 1747, and again in 1794. Here a gallant attempt was made by the British, under Graham, to carry the fortress by storm, but it was defeated; after forcing an entrance their retreat was cut off, and a dreadful slaughter ensued; nearly all were cut to pieces or made prisoners, March 8, 1814.

**BERLIN.** Founded by the margrave Albert, surnamed the Bear, in 1163. Its five districts were united under one magistracy, in 1714; and it was subsequently made the capital of Prussia. This city was taken by an army of Russians, Austrians, and Saxons, in 1760, but they were obliged to retire in a few days. On Oct. 27, 1806, thirteen days after the battle of Jena, the French entered Berlin, and from its palace Napoleon issued his famous Berlin decree.—See *next article*.

**BERLIN DECREE,** a memorable interdict against the commerce of England. It declared the British islands to be in a state of blockade, and all Englishmen found in countries occupied by French troops were to be treated as prisoners of war; the whole world, in fact, was to cease from any communication with Great Britain: issued by Bonaparte from the court of the Prussian king, shortly after the battle of Jena (which, for the time, decided the fate of Prussia), Nov. 21, 1806.—See *Jena*.

**BERMUDAS, or SOMMERS' ISLES,** discovered by Joao Bermudas, a Spaniard, in 1527; but they were not inhabited until 1609, when sir George Sommers was cast away upon them. They were settled by a statute of 9 James I., 1612. Awful and memorable hurricane here, October 31, 1780. Another, by which a third of the houses was destroyed, and all the shipping driven ashore, July 20, 1813.

**BERNARD, MOUNT Sr.** Hannibal, it is said, conducted the Carthaginian army by this pass into Italy; and it was by the same route that Bonaparte led his troops to the plains of Lombardy, before the battle of Marengo, fought June 14, 1800.

**BERNARDINE MONKS.** This order was founded by Robert, abbot of Molesme, in the twelfth century. On the summit of the Great St. Bernard is a large community of monks, who entertain in their convent all travellers gratis for three days.—*Brooke*.

**BERWICK.** This town was the theatre of many bloody contests between the English and Scots; and while England and Scotland remained two kingdoms, was always claimed by the Scots as belonging to them, because it stood on their side of the river. Berwick was burned in 1173, and again in 1216. It was taken from the Scots, and annexed to England, 1333; and after having been taken and retaken many times, was finally ceded to England in 1502. The town surrendered to Cromwell in 1648, and afterwards to general Monk. Since the union of the crowns (James I. 1603), the fortifications, which were formerly very strong, have been much neglected.

**BETHLEHEM,** the birth-place of CHRIST. The Bethlehemite monks, who

had an order in England in 1257, are named from this once distinguished city. It now contains a church, erected by the famous St. Helena, in the form of a cross; also a chapel, called the Chapel of the Nativity, where they pretend to show the manger in which Christ was laid; another, called the Chapel of Joseph; and a third, of the Holy Innocents. Bethlehem is much visited by pilgrims.—*Ashe*.

**BEYROUT.** This city, which was colonized from Sidon, was destroyed by an earthquake, A. D. 566. It was rebuilt, and was alternately possessed by the Christians and Saracens; and after a frequent change of masters, fell into the power of Amurath IV., since when it remained with the Ottoman empire up to the revolt of Ibrahim Pacha, in 1832. Total defeat of the Egyptian army by the allied British, Turkish, and Austrian forces, and evacuation of Beyrout, the Egyptians losing 7000 in killed, wounded, and prisoners, and 20 pieces of cannon, Oct. 10, 1840.

**BIARCHY.** When Aristodemus, king of Sparta, died, he left two sons twins, Eurysthenes and Procles; and the people not knowing to whom precedence should be given, placed them both upon the throne, and thus established the first biarchy, 1102 B. C. The descendants of each reigned alternately for 800 years.—*Herodotus*.

**BIBLE.** The first translation from the Hebrew into the Greek was made by seventy-two interpreters, by the order of Ptolemy Philadelphus; it is thence called the Septuagint version, and was completed in seventy-two days, at Alexandria, 277 B. C.—*Josephus*. It was commenced 284 B. C.—*Lenglet*. In 283.—*Blair*. The Jewish sanhedrim consisted of seventy or seventy-two members; and hence, probably, the seventy or seventy-two translators of Josephus.—*Hewlett*. The seventy-two were shut up in thirty-six cells, and each pair translated the whole; and on subsequent comparison, it was found that the thirty-six copies did not vary by a word or a letter.—*Justin Martyr*.

**BIBLE, ANCIENT COPIES OF THE.** The oldest version of the Old and New Testament belonging to the Christians, is that in the Vatican, which was written in the fourth or fifth century, and published in 1455. The next in age is the Alexandrine MS., in the British Museum, presented by the Greek patriarch to Charles I., and said to have been copied nearly about the same time. The most ancient copy of the Jewish Scriptures existed at Toledo, about A. D. 1000; and the copy of Ben Asher, of Jerusalem, was made about 1100.

**BIBLE, BISHOPS'.** Bishop Alley prepared the Pentateuch; bishops Davis and Sandys, the Historical Books; bishop Bentham, the Psalms, &c.; bishop Horne, the prophets; bishop Grindal, the Minor Prophets; bishops Parkhurst and Barlow, the Apocrypha; bishop Cox, the Gospels and Acts; and archbishop Parker, the remainder. Printed A. D. 1568.

**BIBLE, DIVISION OF THE.** The Bible was divided into twenty-two books by the Jews, the number of letters in their alphabet. The Christians divided the Bible into thirty-nine books. The Hebrew division into chapters was made by the rabbi Nathan, about 1445. Our Bible was divided into chapters, and a part into verses, by archbishop Langton, who died in 1228; and this division was perfected by Robert Stephens, about 1534.

**BIBLE, EDITIONS OF THE.** The vulgate edition, in Latin, was made by St. Jerome, A. D. 405; and is that acknowledged by the Catholic church to be authentic: it was first printed by Guttenberg at Mayence, 1450—55. (See *Books*.) The first perfect edition in English was finished, as appears from the colophon, by Tindal and Coverdale, Oct. 4, 1535. A revision of this edition was made, 1538—9. This last was ordered to be read in churches,

1549. In 1604, at the conference at Hampton-court (see *Conference*), a new translation was resolved upon; which was executed 1607-11, and is that now generally used in Great Britain. J. Eliot's Indian Bible, one of the first books printed in North America, at Cambridge, 1663. The Bible was first printed in Ireland, at Belfast, in 1704. Permitted by the pope to be translated into the language of the Catholic states, 1759. The Bible was printed in

Editions of the Old and New Testament, separately, appeared in several instances at earlier dates, particularly in European languages. The Polyglot Bible, edited by Walton, bishop of Chester, in the Hebrew, Syriac, Chaldee, Samaritan, Arabic, Ethiopic, Persic, Greek, and Latin languages, 1657.—*Wood's Fasti. Oxon.*

**BIBLE SOCIETIES.** Among the principal and oldest societies which have made the dissemination of the Scriptures a collateral or an exclusive object, are the following:—The Society for Promoting Christian Knowledge was formed 1698; Society for Propagating the Gospel in Foreign Parts, 1701; Society, in Scotland, for Promoting Christian Knowledge, 1709; French Bible Society, 1792; British and Foreign Bible Society, 1801; Hibernian Bible Society, 1806; City of London Auxiliary Bible Society, 1812; American Bible Society (which now has numerous branches), founded 1816; American and Foreign Bible Society (Baptist), founded at New-York, 1838. A bull from the pope against Bible Societies appeared in 1817.

**BIGAMY.** The Romans branded the guilty parties with an infamous mark: with us, the punishment of this offence, formerly, was death. The first act respecting it was passed 5 Edward I. 1276.—*Viner's Statutes*. Declared to be felony, without benefit of clergy, 1 James I. 1602. Subjected to the same punishments as grand or petit larceny, 35 George III. 1794.—*Statutes at large*.

**BILL OF RIGHTS.** One of the great foundations of the British constitution, was obtained from Charles I. by parliament, 1628. This bill recognized the legal privileges of the subject; and notwithstanding the employment of all manner of arts and expedients to avoid it, Charles was constrained to pass it into a law. The Bill of Rights, declaratory of the rights of British subjects, passed 1 William and Mary, February 1689. This is the only *written* law respecting the liberties of the people, except *Magna Charta*.—*Viner's Statutes*.

**BILLS OF EXCHANGE.** Invented by the Jews, as a means of removing their property from nations where they were persecuted, a. d. 1160.—*Anderson*. Bills were used in England, 1307.—The only legal mode of sending money from England, 4th Richard II., 1381. Regulated, 1698—first stamped, 1782—duty advanced, 1797—again, June 1801; and since. It was made capital to counterfeit bills of exchange in 1734. In 1825, the year of disastrous speculations in bubbles, it was computed that there were 400 millions of pounds sterling represented by bills of exchange and promissory notes. The present amount is not supposed to exceed 50 millions. The many statutes regarding bills of exchange were consolidated by act 9 George IV. 1828. A new act regulating bills of exchange, passed 3 Victoria, July 1839.

**BILLS OF MORTALITY FOR LONDON.** These bills were first compiled about a. d. 1536, but in a more formal and recognized manner in 1593, after the

great plague of that year; and however imperfect they still are, they yet afford valuable materials for computation on the duration of life; no complete series of them has been preserved. The following are returns, showing the numbers at decennial distances, within the last sixty years:—

|                                |          |                           |              |
|--------------------------------|----------|---------------------------|--------------|
| In the year 1780, Christenings | - 16,634 | In the year 1780, Burials | - - - 20,507 |
| 1790, Christenings             | - 18,980 | 1790, Burials             | - - - 18,038 |
| 1800, Christenings             | - 19,176 | 1800, Burials             | - - - 23,068 |
| 1810, Christenings             | - 19,930 | 1810, Burials             | - - - 19,892 |
| 1820, Christenings             | - 26,158 | 1820, Burials             | - - - 19,348 |
| 1830, Christenings             | - 27,028 | 1830, Burials             | - - - 23,524 |
| 1840, Christenings             | - 30,387 | 1840, Burials             | - - - 26,774 |

**BILLIARDS.** Invented by the French, by whom, and by the Germans, Dutch, and Italians, they were brought into general vogue throughout Europe.—*Nouv. Dict.* The French ascribe their invention to Henrique Devigne, an artist, in the reign of Charles IX., about 1571. Slate billiard-tables were introduced in England in 1827.

**BIRDS.** Divided by Linnæus into six orders; by Blumenbach into eight; and by Cuvier into six. Man is especially enjoined not to harm the nest of the bird: "If a bird's nest chance to be before thee in the way in any tree, or on the ground, *whether they be young ones or eggs*, and the dam sitting upon the young, or upon the eggs, thou shalt not take the dam with the young."—*Duteronomy*, xxii. 6.

**BIRMINGHAM, ENGLAND.** This town existed in the reign of Alfred, A. D. 872; but its importance as a manufacturing town commenced in the reign of William III. Birmingham was besieged and taken by prince Rupert in 1643. The great works of Soho were established by the illustrious engineer, Matthew Boulton, in 1764.

**BIRTHS.** Parish registers of them, and of marriages and burials, were instituted by Cromwell, earl of Essex, 28 Henry VIII. 1536. The births of children were taxed in England, viz.: birth of a duke, 30*l*.—of a common person, 2*s*.—7 William III. 1695. Taxed again, 1783. The instances of four children at a birth are numerous; but the most extraordinary delivery recorded in modern times is that of a woman of Königsberg, who had five children at a birth, September 3, 1783.—*Phillips*. The wife of a man named Nelson, a journeyman tailor, of Oxford-market, London, had five children at a birth, in October 1800.—*Annals of London*.

**BISHOPS.** The name was given by the Athenians to those who had the inspection of the city. The Jews and Romans had also a like officer; but now it means only that person who has the government of church affairs in a certain district. In England, the dignity is coeval with Christianity. St. Peter, the first bishop of Rome, was martyred A. D. 65. The bishops of Rome assumed the title of pope in 138, the rank was anciently assumed by all bishops; but it was afterwards ordained that the title of pope should belong only to the occupant of St. Peter's chair.—*Warner*.

**BISHOPS OF ENGLAND.** The first was appointed in A. D. 180. See *York, London*. They were made barons, 1072. The *Congé d'Elire* of the king to choose a bishop originated in an arrangement of king John with the clergy. Bishops were elected by the king's *Congé d'Elire*, 26 Henry VIII. 1535. Seven were deprived for being married, 1554. Several suffered martyrdom under queen Mary, 1555–6. See *Cranmer*. Bishops were excluded from voting in the house of peers on temporal concerns, 16 Charles I. 1640. Twelve were committed for high treason, in protesting against the legality of all acts of parliament passed while they remained deprived of their votes, 1641. Regained their seats, Nov. 1661. Seven were sent to the tower for not reading the king's declaration for liberty of conscience, contrived to bring the Catholics into ecclesiastical and civil power, and were tried and acquit-

ted, June 29–30, 1688. The archbishop of Canterbury (Dr. Sancroft) and five bishops were suspended for refusing to take the oaths to William and Mary, 1689, and were deprived 1690.—*Warner's Eccles. Hist.* The sees of Bristol and Gloucester were united, and that of Ripon created, in 1836. An order in council, in Oct. 1838, directed the sees of Bangor and St. Asaph to be united on the next vacancy in either, and Manchester, a new see, to be created thereupon. This order, as regarded the union of the sees, rescinded in 1846.—See *Manchester*.

**BISHOPS OF IRELAND.** Bishops are said to have been consecrated in this country as early as the second century. The bishopric of Ossory, first planted at Saiger, was founded A. D. 402, thirty years before the arrival of St. Patrick.

**BISHOPS OF SCOTLAND.** They were constituted in the fourth century. The see of St. Andrew's was founded by Hergustus, king of the Picts, who, according to a legendary tale of this prelacy, encouraged the mission of Regulus, a Greek monk of Patræ, about A. D. 370. The bishops were deprived of their sees, and episcopacy abolished in Scotland at the period of the revolution, 1688–9. *Warner's Eccles. Hist.*—There are now, however, six bishops belonging to the Scotch Episcopal Church, viz: Aberdeen, Brechin, Edinburgh, Glasgow, Moray, and St. Andrew's.

**BISHOPS, PRECEDENCY OF,** was settled by statute 31 Henry VIII. to be next to viscounts, they being barons of the realm, 1540; and they have the title of *Lord*, and *Right Rev. Father in God*. The archbishops of Canterbury and York, taking place of all dukes, have the title of *Grace*. The bishops of London, Durham, and Winchester have precedence of all bishops; the others rank according to the seniority of consecration. A late contest in Ireland between the bishops of Meath and Kildare for precedence was decided in favor of the former, who now ranks after the archbishop of Dublin. The others rank according to consecration.

**BISHOPS IN AMERICA.** The first was the Right Rev. Doctor Samuel Seabury, consecrated bishop of Connecticut by four nonjuring prelates, at Aberdeen, in Scotland, Nov. 14, 1784. The bishops of New-York and Pennsylvania were consecrated in London, by the archbishop of Canterbury, Feb. 4, 1787; and the bishop of Virginia in 1790. The first Catholic bishop of the United States was Dr. Carroll of Maryland, in 1789.

**BISSEXTILE or LEAP YEAR.** An intercalary day was thrown into every fourth year to adjust the calendar, and make it agree with the sun's course. It originated with Julius Cæsar, who ordered a day to be counted before the 24th of February, which among the Romans was the 6th of the calends, and which was therefore reckoned twice, and called *bissextile*: this added day we name the 29th of February every fourth year, 45 B. C.—See *Calendar* and *Leap Year*.

**BITHYNIA.** Conquered by Cræsus, about 560 B. C.; and again by Alexander, 332 B. C. It afterwards recovered its liberty; but its last king bequeathed it to the Romans, 40 B. C. In modern history Bithynia makes no figure, except that from its ruins rose the Othman Turks, who, in A. D. 1327, took Prusa, its capital, and made it the seat of their empire before they possessed Constantinople.

**BLACK BOOK,** a book kept in the English monasteries, wherein details of the scandalous enormities practised in religious houses were entered for the inspection of visitors, under Henry VIII., 1535, in order to blacken them and hasten their dissolution; hence the vulgar phrase "I'll set you down in the black book."

**BLASPHEMY.** This crime is recognized both by the civil and canon law of

England. Justinian adjudged it the punishment of death. In Scotland, the tongue was amputated. Visited by fine and imprisonment, 9 & 10 William III., 1696-7.—*Statutes at large*. In England this offence has been subjected, on some late occasions, to the visitation of the laws. *Daniel Isaac Eaton* was tried and convicted in London of blasphemy, 13th March, 1812. A protestant clergyman, named *Robert Taylor*, was tried in London twice for the same crime, and as often convicted. *Taylor* was last brought to the bar, and sentenced to two years' imprisonment, and largely fined, for (among other things) reviling the Redeemer in his discourses, July, 1831. Even as late as in Dec. 1840, two prosecutions against publishers of blasphemous writings, subjected the offenders to the sentence of the court of Queen's Bench.

**BLAZONRY.** The bearing coats-of-arms was introduced, and became hereditary in families in France and England, about A.D. 1192, owing to the knights painting their banners with different figures, thereby to distinguish them in the crusades.—*Dugdale*.

**BLEACHING.** This art was known early in Egypt, Syria, and India. Known in ancient Gaul.—*Pliny*. In the last century an improved chemical system was adopted by the Dutch, who introduced it into England and Scotland in 1768. There are now immense bleachfields in both countries, particularly in Lancashire, and in the counties of Fife, Forfar, and Renfrew, and in the vale of the Leven, in Dumbarton. The chemical process of Berthollet was introduced in 1795.—*Blanchiment des Toiles*.

**BLENHEIM, BATTLE OF;** between the English and confederates, commanded by the duke of Marlborough, and the French and Bavarians, under marshal Tallard and the elector of Bavaria, whom Marlborough signally defeated with the loss of 27,000 in killed, and 13,000 prisoners, Tallard being among the latter: the electorate of Bavaria became the prize of the conquerors. The nation testified its gratitude to the duke by the gifts of the honor of Woodstock and hundred of Wotton, and erected for him one of the finest seats in the kingdom, known as the domain and house of Blenheim. Fought Aug. 2, 1704.—*Hume*.

**BLINDING,** by consuming the eyeballs with lime or scalding vinegar, a punishment inflicted anciently on adulterers, perjurers, and thieves. In the middle ages they changed the penalty of total blindness to a diminution of sight. Blinding the conquered was a practice in barbarous states; and a whole army was deprived of their eyes by Basilius, in the eleventh century. See *Bulgarians*. Several of the Eastern emperors had their eyes torn from their heads. See article *Eastern Empire*.

**BLISTERS.** They were first made, it is said, of cantharides.—*Freind*. Blisters are said to have been first introduced into medical practice by Aretæus, a physician of Cappadocia, about 50 B. C.—*Le Clerc's Hist. of Physic*.

**BLOOD, CIRCULATION OF THE,** through the lungs, first made public by Michael Servetus, a Spanish physician, in 1553. Cissalpinus published an account of the general circulation, of which he had some confused ideas; improved afterwards by experiments, 1569. Paul of Venice, commonly called Father Paolo, whose real name was Peter Sarpi, certainly discovered the valves which serve for the circulation; but the honor of the positive discovery of the circulation of the blood belongs to Harvey, an English physician, by whom it was fully confirmed, 1628.—*Freind's Hist. of Physic*.

**BLOOD, DRINKING OF.** Anciently a mode was tried of giving vigor to the system by administering blood as a draught. Louis XI., in his last illness, drank the warm blood of infants, in the vain hope of restoring his decayed

strength, 1438.—*Henault*. Eating blood was prohibited to Noah, *Gen.* ix. and to the Jews, *Lev.* xvii. The prohibition repeated by the apostles at the council of Jerusalem, *Acts* xv.

**BLOOD, TRANSFUSION OF.** In the fifteenth century an opinion prevailed that the declining strength and vigor of old people might be repaired by transfusing the blood of young persons, drawn from their veins, into those of the infirm and aged. It was countenanced in France by the physicians, and prevailed for many years, till the most fatal effects ensued from the operation. Some of the principal nobility having died, and others turned raving mad, it was suppressed by an edict. Attempted in France in 1797. Practised more recently there, in a few cases, with success; and in England (but the instances are rare) since 1823.—*Med. Jour.* "One English physician, named Louver, or Lower, practised in this way; he died in 1691."—*Freind's Hist. of Physic.*

**BLOOD'S CONSPIRACY.** Blood, a discarded officer of Oliver Cromwell's household, and his confederates, seized the duke of Ormond in his coach, and had got him to Tyburn, intending to hang him, when he was rescued by his friends. Blood afterwards, in the disguise of a clergyman, stole the regal crown from the Jewel-office in the Tower: yet, notwithstanding these and other offences, he was not only pardoned, but had a pension of £500 *per annum* settled on him by Charles II. 1673.

**BLUE STOCKING.** This term is applied to literary ladies, and was originally conferred on a society of literary persons of both sexes. One of the most active promoters of the society was Benjamin Stillingfleet, the distinguished naturalist and miscellaneous writer, who always wore blue worsted stockings, and hence the name: the society existed in 1760, *et seq.*—*Anec. of Bouyer*. The beautiful and fascinating Mrs. Jerningham is said to have worn blue stockings at the *conversazioni* of lady Montague; and this peculiarity also fastened the name upon accomplished women.

**BOARD OF TRADE AND PLANTATIONS.** Charles II., on his restoration, established a council of trade for keeping a control over the whole commerce of the nation, 1660; he afterwards instituted a board of trade and plantations, which was remodelled by William III. This board of superintention was abolished in 1782; and a new council for the affairs of trade was appointed, Sept. 2, 1786.

**BOATS.** Their invention was so early, and their use so general, the art cannot be traced to any age or country. Flat-bottomed boats were made in England in the reign of the Conqueror: the flat-bottomed boat was again brought into use by Barker, a Dutchman, about 1690. The life-boat was first suggested at South Shields; and one was built by Mr. Greathead, the inventor, and was first put to sea, Jan. 30, 1790.

**BOCCACCIO'S BOOK, IL DECAMERONE,** a collection of a hundred stories or novels, not of moral tendency: feigned to have been related in ten days, and, as is said by Petrarch, "possessing many charms." A copy of the first edition (that of Valdafer, in 1471) was knocked down, at the duke of Roxburgh's sale, to the duke of Marlborough, for £2260, June 17, 1812. This identical copy was afterwards sold, by public auction, for 875 guineas, June 5, 1819.

**BŒOTIA,** the country of which Thebes was the capital. Thebes was equally celebrated for its antiquity, its grandeur, and the exploits and misfortunes of its kings and heroes. The country was known successively as Aonia, Messapia, Hyantis, Ogygia, Cadmeis, and Bœotia; and it gave birth to Pin-dar, Hesiod, Plutarch, Democritus, Epaminondas, and the accomplished and beautiful Corinna.

BŒOTIA. *continued.*

|                                                                                                                             |            |
|-----------------------------------------------------------------------------------------------------------------------------|------------|
| Arrival of Cadmus, the founder of Cadmea                                                                                    | B. C. 1493 |
| Reign of Polydore                                                                                                           | - 1459     |
| Labdacus ascends the throne                                                                                                 | - 1430     |
| Amphion and Zethus besiege Thebes, and dethrone Laius                                                                       | - 1388     |
| Œdipus, not knowing his father Laius, kills him in an affray, confirming the oracle as to his death by the hands of his son | - 1276     |
| Œdipus encounters the Sphinx, and resolves her enigmas                                                                      | - 1266     |
| War of the Seven Captains                                                                                                   | - 1225     |

|                                                                                                                                                     |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| Thebes besieged and taken                                                                                                                           | B. C. 1216 |
| Thersander reigns in Thebes                                                                                                                         | - 1215     |
| The Thebans abolish royalty, and ages of obscurity follow                                                                                           | - 1128     |
| * * * * *                                                                                                                                           |            |
| Battle of Chæronea, in which the Thebans defeat the Athenians                                                                                       | - 447      |
| Epaminondas defeats the Lacedæmonians at Leuctra, restores his country to independence, and puts it in a condition to dictate to the rest of Greece | 371        |
| Philip, king of Macedon, defeats the Thebans and Athenians, near Chæronea                                                                           | - 338      |

Here the greatness of this country ends. Alexander destroyed Thebes, the capital, 335 B. C., when the house of Pindar alone was left standing, and all the inhabitants were either killed or sold as slaves.—*Strabo*.

**BOGS.** Commonly the remains of fallen forests, covered with peat and loose soil. Moving bogs are slips of land carried to lower levels by accumulated water. Acts relating to Ireland, for their drainage, passed, March, 1830. The bog-land of Ireland has been estimated at 3,000,000 acres; that of Scotland, at upwards of 2,000,000; and that of England, at near 1,000,000 of acres.

**BOH,** a fierce barbarian general, son of Odin, lived 60 B. C. The exclamation of his name petrified his enemies, and is yet used to frighten children.

**BOHEMIA.** This country was originally governed by dukes: the title of king was obtained from the emperor Henry IV. The kings at first held their territory of the Empire, but they at length threw off the yoke: the crown was elective till it came into the house of Austria, in which it is now hereditary.—See *Germany*.

|                                                                                                                                   |           |
|-----------------------------------------------------------------------------------------------------------------------------------|-----------|
| The Slavonians, seizing Bohemia, are ruled by dukes                                                                               | A. D. 550 |
| City of Prague founded                                                                                                            | - 795     |
| Introduction of Christianity                                                                                                      | - 894     |
| Bohemia conquered by the emperor Henry III., who spreads devastation through the country                                          | - 1041    |
| The regal title is conferred on Uratislas, the first king                                                                         | - 1061    |
| The regal title is farther confirmed to Ottoacre I.                                                                               | - 1199    |
| Reign of Ottoacre II., who carries his arms into Prussia                                                                          | - 1258    |
| Ottoacre, refusing to do homage to the emperor Rodolphus, is by him vanquished, and deprived of Austria, Styria, and Carniola     | - 1282    |
| In the reign of Wincelas III. mines of silver are first discovered, and agriculture is encouraged and improved ( <i>et seq.</i> ) | - 1284    |
| Wincelas IV. becoming odious for his vices, is assassinated                                                                       | - 1305    |
| John, count of Luxemburgh, is chosen to succeed                                                                                   | - 1310    |
| Silesia is made a province of Bohemia                                                                                             | 1342      |
| King John slain at the battle of Crecy, fought with the English                                                                   | - 1346    |

|                                                                                                                                                                                                                    |              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| John Huss and Jerome of Prague, two of the first Reformers, are burnt for heresy, which occasions an insurrection; when Sigismund, who betrayed them, is deposed, and the Imperialists are driven from the kingdom | 1415 & 1416  |
| Albert, duke of Austria, marries the daughter of the late emperor and king, and receives the crowns of Bohemia and Hungary                                                                                         | - 1437       |
| The succession infringed by Ladislas, son of the king of Poland, and George Podiebrad, a protestant chief                                                                                                          | 1440 to 1458 |
| Ladislas, VI., king of Poland, elected king of Bohemia, on the death of Podiebrad                                                                                                                                  | - 1471       |
| The emperor Ferdinand I. marries Anne, sister of Louis the late king, and obtains the crown                                                                                                                        | - 1527       |
| The elector palatine Frederick is driven from Bohemia                                                                                                                                                              | - 1618       |
| The crown is secured to the Austrian family by the treaty of                                                                                                                                                       | - 1648       |
| Silesia and Glatz ceded to Prussia                                                                                                                                                                                 | - 1742       |
| Prague taken by the Prussians                                                                                                                                                                                      | - 1744       |
| The memorable siege of Prague                                                                                                                                                                                      | - 1757       |
| Revolt of the peasantry                                                                                                                                                                                            | - 1775       |
| The French occupy Prague                                                                                                                                                                                           | - 1806       |

See *Germany*.

**BOILING TO DEATH.** A capital punishment in England, by statute 23 Henry VIII., 1532. This act was occasioned by seventeen persons having been poisoned by Rouse, the bishop of Rochester's cook, when the offence of poisoning was made treason, and it was enacted to be punished by boiling the criminal to death! Margaret Davie, a young woman, suffered in the same manner for a similar crime, in 1541.

**BOLOGNA.** Distinguished for its many rare and magnificent specimens of architecture. Its ancient and celebrated university was founded by Theodosius, A. D. 433. Pope Julius II., after besieging and taking Bologna, made his triumphal entry into it with a pomp and magnificence by no means fitting (as Erasmus observes) for the viceroy of the meek Redeemer, Nov. 10, 1506. Here, in the church of St. Patronius, which is remarkable for its pavement, Cassini drew his meridian line, at the close of the seventeenth century. Taken by the French, 1796; by the Austrians, 1799; again by the French, after the battle of Marengo, in 1800; restored to the pope in 1815; Austrians expelled by the people, August 8, 1848.

**BOMBAY, INDIA.** Given as part of the marriage-portion of the princess Catherine of Portugal, on her marriage with Charles II., 1661. Granted by William III. to the East India Company in 1688, and it now forms one of the three presidencies. An awful fire raged here, and a number of lives were lost, Feb. 27, 1803.—See *India*.

**BOMBS,** invented at Venlo, in 1495, but according to some authorities near a century after. They came into general use in 1634, having been previously used only in the Dutch and Spanish armies. Bomb-vessels were invented in France, in 1681.—*Voltaire*. The Shrapnel shell is a bomb filled with balls, and a lighted fuse to make it explode before it reaches the enemy; a thirteen-inch bomb-shell weighs 198 lbs.

**BONDAGE, OR VILLANAGE,** was enforced under William I. A villain in ancient times meant a peasant enslaved by his lord. A release from this species of servitude was ordered on the manors of Elizabeth, in 1574. See *Villain*.

**BONE-SETTING.** This branch of the art of surgery cannot be said to have been practised scientifically until 1620, before which time it was rather imperfectly understood.—*Bell*. The celebrity obtained by a practitioner at Paris, about 1600, led to the general study of bone-setting as a science.—*Freind's Hist of Physic*.

**BOOKS.** Ancient books were originally boards, or the inner bark of trees; and bark is still used by some nations, as are also skins, for which latter parchment was substituted. Papyrus, an Egyptian plant, was adopted in that country. Books whose leaves were vellum, were invented by Attalus, king of Pergamus, about 198 B. C., at which time books were in volumes or rolls. The MSS. in Herculaneum consist of papyrus, rolled and charred, and matted together by the fire, and are about nine inches long, and one, two, or three inches in diameter, each being a separate treatise. The Pentateuch of Moses, and the history of Job, are the most ancient in the world; and in profane literature, the poems of Homer, though the names of others still more ancient are preserved.

**BOOKS, PRICES OF.** Jerome states that he had ruined himself by buying a copy of the works of Origen. A large estate was given for one on cosmography, by Alfred, about A. D. 872. The *Roman de la Rose* was sold for above 30*l.*; and a Homily was exchanged for 200 sheep and five quarters of wheat; and they usually fetched double or treble their weight in gold. They sold at prices varying from 10*l.* to 40*l.* each, in 1400. In our own times, the value of some volumes is very great. A copy of *Macklin's Bible*, ornamented by Mr. Tomkins, has been declared worth 500 guineas.—*Butler*. A yet more superb copy is at present insured in a London office for 3,000*l.*—*Times*. *Il Decamerone* of Boccaccio, edition of 1471, was bought at the duke of Roxburgh's sale by the duke of Marlborough for 2260*l.* June 17, 1812.—*Phillips*. A copy of the "Mazarin Bible," being the first edition and first book ever printed (by Guttemberg at Mentz in 1455) was sold at auction in London

in April 1846 for 500%. This copy, the only one known to exist except 19 in public libraries, is now in a private library in New York.

**BOOKS, PRINTED.** The first printed books were trifling hymns and psalters, and being printed only on one side, the leaves were pasted back to back. The first printing was, as a book, the *Book of Psalms*, by Faust and Schæffler, his son-in-law, Aug. 14, 1457. Several works were printed many years before; but as the inventors kept the secret to themselves, they sold their first printed works as manuscripts. This gave rise to an adventure that brought calamity on Faust; he began in 1450 an edition of the Bible, which was finished in 1460. See article *Devil and Dr. Faustus*. The second printed was *Cicero de Officiis*, 1466.—*Blair*. The first book printed in England was *The Game and Play of the Chesse*, by Caxton, 1474. The first in Dublin was the *Liturgy*, in 1550. The first classical work printed in Russia was *Corn. Nepotis Vita*, in 1762. *Lucian's Dialogues* was the first Greek book printed in America (at Philadelphia), 1789. Books of astronomy and geometry were all destroyed in England as being infected with magic, 6 Edward VI. 1552.—*Stowe's Chronicles*.

The above is from *Haydn*; but according to *Pettigrew*, (*Biblio. Sussex*.) the first book printed with movable types was the Latin Bible, printed by John Guttenberg at Mayence, about 1455. It was in two folio volumes; and so excellent was the workmanship, both in type, ink, paper, and press-work, that it has scarcely been surpassed since. The succeeding editions for 200 years were much inferior. This edition is called the *Mazarin Bible*, as a copy was first found in the library of cardinal Mazarin. Only 20 copies are now known to exist—all but one being in public libraries in Europe. [See previous article.] Specimens of the *block books*, printed with engraved wooden blocks, instead of type, are now very rare. Of the *Biblia Pauperum*, done in this way, only two copies exist, one of which belongs to a citizen of New York.

**BOOK-BINDING.** The book of St. Cuthbert, the earliest ornamented book, is supposed to have been bound about A. D. 650. A Latin Psalter in oak boards was bound in the ninth century. A MS. copy of the four evangelists, the book on which our kings from Henry I. to Edward VI. took their coronation oath, was bound in oaken boards, nearly an inch thick, A. D. 1100. Velvet was the covering in the fourteenth century; and silk soon after. Vellum was introduced early in the fifteenth century; it was stamped and ornamented about 1510. Leather came into use about the same time. Cloth binding superseded the common boards, generally, about 1831. Caoutchouc, or India-rubber backs to account-books and large volumes introduced 1841.

**BOOK-KEEPING.** The system by double-entry, called originally Italian book-keeping, was taken from the course of algebra which was published by Burgo, at Venice, then a great commercial state, in the fifteenth century. It was made known in England by James Peele, who published his *Book-keeping* in 1569.—*Anderson*.

**BOOK TRADE** of Great Britain, France, and Germany. The number of new works published in successive years is thus stated:

|      | Gt. Brit. | France. | Germany. |      | Gt. Brit. | France. | Germany. |
|------|-----------|---------|----------|------|-----------|---------|----------|
| 1828 | 842       | —       | 5,654    | 1836 | 1,332     | —       | 7,891    |
| 1830 | 1,142     | —       | 5,926    | 1849 | —         | —       | —        |
| 1834 | 1,220     | —       | 6,074    | 1850 | —         | 7,208   | —        |

The number of printed books received from 1814 to 1847 inclusive, under the copyright acts, from the trustees of the British Museum, amount to 55,474, or 1681 each year.

*England.*—The whole number of books printed in England during 14 years, from 1666 to 1680, was 3,550; equal to 253 yearly;—but deducting the

reprints, pamphlets, single sermons, and maps, the annual average of new books may be computed at much less than 100.

The number of new works, exclusive of "all pamphlets and other tracts," issued during 56 years, as appears from a "Complete Catalogue of Modern Books published from the beginning of the century (1700) to 1756," was 5,280; equal to a yearly average of 94.

The number of new works, exclusive of reprints and pamphlets, issued during eleven years, from 1792 to 1802 inclusive, was 4,096; equal to 372 each year.

The number of new publications issued in 27 years, from 1800 to 1827, including reprints altered in size and price, but excluding pamphlets, was, according to the London Catalogue, 19,860:—deducting one fifth for reprints, we have 15,888, equal to 588 each year.

Mr. McCulloch estimates the number of volumes of new publications produced annually in Great Britain (exclusive of reprints, pamphlets, and periodical publications not in volumes) at about 1,500; and the average impression of each volume at 750 copies;—annual total, 1,125,000 volumes:—value at 9s. a volume, £506,250. "The number of reprinted volumes, particularly of school-books, is very great; and if to these we add the reviews, magazines, pamphlets, and all other publications, exclusive of newspapers, the total publication value of the new works of all sorts, and new copies of old works that are annually produced, may be estimated at about £750,000."

*France.*—The activity of the French press has been very greatly increased since the downfall of Napoleon. The count Daru, in a very instructive work (*Notions Statistiques sur la Librairie*), published in 1827, estimated the number of printed sheets, exclusive of newspapers, produced by the French press in 1816 at 66,852,883; and in 1825, at 128,011,483; and we believe that the increase from 1825 down to the present period has been little if any thing inferior.

The first six months of the year 1837, as stated by the "Foreign Quarterly review," there were printed in France, 3,413 works, in French and other languages; also 571 engravings and lithographs.

*Germany.*—The book-trade of Germany is greatly facilitated by the book-fairs held at Leipsic at Easter and Michaelmas, which are attended by the booksellers of Germany, and by many of those of the neighboring countries, as France, Switzerland, Denmark, &c. This trade began to flourish in 1814; the number of works then annually offered for sale was about 2,000; but the number has been gradually increasing, having for the first time exceeded 5,000 in 1827; and it now exceeds 7,000.

"An Augsburg paper states," (says the "Foreign Quarterly Review," 1836,) "that, on a moderate calculation, 10,000,000 of volumes are annually printed in Germany, and as every half-yearly fair catalogue contains the names of more than 1,000 German writers, it may be assumed, that there are now living upwards of 50,000 persons who have written one or more books. The total value of all the books published annually in Germany is estimated from 5 to 6,000,000 dollars."

*Russia.*—In the year 1836, 674 original works, and 124 translations were published in Russia, exclusive of 46 periodicals.

*Sweden.*—There are only 28 or 30 printing presses in Sweden; 10 in Stockholm, 3 in Gottenburg, 2 in Upsal, 2 in Norköping, and 1 in several other places.

**BOOK-TRADE OF THE UNITED STATES.** The number of new works which appeared in the United States, in 1834 and 1835, amounted to 1,013, forming

1,300 volumes, and the cost of which may be estimated at \$1,220,000. In 1836, the number was considerably increased, and the cost of the books published in that year cannot be computed at less than \$1,500,000. Boston, New York, Philadelphia, and Hartford furnished 19 20ths of the amount.

Another statement for the years 1833, 1834, and 1835, is as follows:—originals 1,030, reprints, 854; total, 1,884;—number of volumes printed (1,000 for each edition), 1,884,000.

In most cases the editions of one and the same work are larger and more frequent in the United States than in any other country. Many reprinted English works have here passed three or four editions, while the publishers of the original in England have but one. In one instance, the sale of a book in America amounted to 100,000 copies, whereas in England only four editions, of 1,000 copies each, were disposed of.

The amount of literary productions in America has more than doubled during the last ten years. The sales of five book-selling establishments amounted in 1836, to \$1,350,000.

The following statement will show the relative proportion of native and imported literary productions in 1834:

|                         | <i>Original.</i> | <i>Reprint.</i> |                       | <i>Original.</i> | <i>Reprint.</i> |
|-------------------------|------------------|-----------------|-----------------------|------------------|-----------------|
| Education -             | 73               | 9               | Poetry -              | 5                | 3               |
| Divinity -              | 37               | 13              | Travels -             | 8                | 10              |
| Novels and Tales -      | 19               | 95              | Fine Arts -           | 8                | 0               |
| History and Biography - | 19               | 17              | Miscellaneous works - | 59               | 43              |
| Jurisprudence -         | 20               | 3               |                       |                  |                 |

Thus it appears in American literature the scientific and practically useful predominate, and that works of imagination are chiefly derived from foreign sources. The school-books are almost all written or compiled in the United States; and some idea of the extensive business done in them may be formed from the circumstance, that, of some of the most popular compilations in geography, from 100,000 to 300,000 copies have been sold in ten years; so that, in many instances, works of this kind produce a permanent income, as well to the author as the publisher. During the last five years, the number of American original works in proportion to reprints, has nearly doubled.

[The preceding paragraph is derived from statistics in the *Booksellers' Advertiser*, edited by G. P. Putnam, New York, 1835. Since then, no complete register has been kept of publications in successive years: but the following list is compiled from the semi-monthly register in the *Literary World*.]

AMERICAN PUBLICATIONS—January to June, 1849.

|                     | <i>Original.</i> | <i>Reprint.</i> |                             | <i>Original.</i> | <i>Reprint.</i> |
|---------------------|------------------|-----------------|-----------------------------|------------------|-----------------|
| Education -         | 36               | 7               | Travels -                   | 21               | 7               |
| Divinity -          | 25               | 25              | Metaphysics -               | 3                | 8               |
| Novels and Tales -  | 18               | 28              | Miscellaneous -             | 25               | 10              |
| History -           | 20               | 12              | Law                         |                  |                 |
| Biography -         | 15               | 6               | Juvenile } not ascertained. |                  |                 |
| Political Economy - | 3                | 0               | Periodical }                |                  |                 |
| Medicine -          | 12               | 11              |                             |                  |                 |
| Science -           | 11               | 9               | For six months -            | 200              | 128             |
| Poetry -            | 11               | 6               | Total, 328.                 |                  |                 |

The number of new publications for the year 1849 would thus be 656, exclusive of law and juvenile books, and occasional pamphlets and periodicals.

**BOOTS.** They are said to have been the invention of the Carians, and were made of iron, brass, or leather; of the last material some time after their invention, boots were known to the Greeks, for Homer mentions them about 907 B. C.

**BORODINO OR MOSKWA, BATTLE OF,** one of the most sanguinary in the records of the world, fought Sept. 7, 1812, between the French and Russians; commanded on the one side by Napoleon, and on the other by Kutusoff,

240,000 men being engaged. Each party claimed the victory, because the loss of the other was so immense; but it was rather in favor of Napoleon, for the Russians subsequently retreated, leaving Moscow to its fate. The road being thus left open, the French entered Moscow, Sept. 14, with little opposition. But a signal reverse of fortune now took place, which preserved the Russian empire from ruin, and paved the way to the downfall of the French military power over Europe. See *Moscow*.

**BOROUGH.** Anciently a company of ten families living together. The term has been applied to such towns as send members to parliament, since the election of burgesses in the reign of Henry III. 1265. Burgesses were first admitted into the Scottish parliament by Robert Bruce, 1326—and into the Irish, 1365.

**BOROUGH ENGLISH.** This was an ancient tenure by which the younger son inherits. Its origin is thus explained: in feudal times the lord is said to have claimed the privilege of spending the first night with the vassal's bride, and on such occasions the land was made to descend to the next son, in consequence of the supposed illegitimacy of the elder. This kind of tenure is mentioned as occurring A. D. 834. It existed in Scotland, but was abolished by Malcolm III. in 1062.—*Haydn*.

**BOSPHORUS**, now called *Circassia*. The history of this kingdom is involved in obscurity, though it continued for 530 years. It was named Cimmerian, from the *Cimmeri*, who dwelt on its borders. The descendants of Archanactes of Mytilene settled in this country, but they were dispossessed by order of the emperor Spartacus, in 438 B. C. Mithridates conducted a prisoner to Rome, by Claudius, and his kingdom soon afterwards made a province of the empire, A. D. 40. The strait of the Bosphorus was closed by the Turks, Sept. 8, 1828. It was blockaded by the Russian squadron under admiral Greig, Dec. 31, same year. See *Dardanelles*.

**BOSTON**, the capital of Massachusetts, founded in August 1630. Here commenced the American Revolution. British soldiers fired on the people, 1770. The celebrated "Tea-party" here, took place 1773. The port closed by parliament 1774. British army evacuated Boston in March 1776. [See *Lexington* and *Bunker Hill*.] The cause of American freedom was nowhere more actively sustained than by the people of Boston. Benjamin Franklin was born here, Jan. 17, 1706. John Hancock, the first signer of the Declaration of Independence, was a Bostonian. Boston incorporated as a city, 1822. Population in 1700, 7000; in 1790, 18,038; in 1810, 33,250; in 1820, 43,298; in 1830, 61,391; in 1845, 114,366. Tonnage of vessels in 1840, 220,243 tons.

**BOSWORTH FIELD, BATTLE OF**, the thirteenth and last between the houses of York and Lancaster, in which Richard III. was defeated by the earl of Richmond, afterwards Henry VII., the former being slain, Aug. 22, 1485. The crown of Richard was found in a hawthorn bush, on the plain where the battle was fought, and Henry was so impatient to be crowned, that he had the ceremony performed on the spot with that very crown. In the civil contests between the "Roses," many of the most ancient families in the kingdom were entirely extinguished, and no less than 100,000 human beings lost their lives.

**BOTANY.** Aristotle is considered the founder of the philosophy of botany. The *Historia Plantarum* of Theophrastus, written about 320 B. C. Authors on botany are numerous from the earlier ages of the world, to the close of the 15th century, when the science became better understood. The study was advanced by Fuchsius, Bock, Bauhin, Cæsalpinus, and others, between 1535 and 1600.—*Melchior Adam*. The system and arrangement of Linnæus, the first botanist of modern times, made known about 1750. Jussieu's sys-

tem, in 1758. At the time of Linnæus's death, A. D. 1778, the species of plants actually described amounted in number to 11,800. The number of species of all denominations now recorded cannot fall short of 100,000.

**BOTANY BAY**, originally fixed on for a colony of convicts from Great Britain. The first governor, Phillips, who sailed from England in May, 1787, arrived at the settlement in January, 1788. The bay had been discovered by captain Cook in 1770, and the place took its name from the great variety of herbs which abounded on the shore. The colony was fixed at Port Jackson, about thirteen miles to the north of the bay. See *New South Wales* and *Transportation*.

**BOTTLES**, of glass, were first made in England, about 1558.—See *Glass*. The art of making glass bottles and drinking glasses was known to the Romans at least before 79 A. D., for these articles and other vessels have been found in the Ruins of Pompeii. A bottle which contained two hogsheads was blown, we are told, at Leith, in Scotland, in January, 1747-8.

**BOULOGNE, FRANCE**. Taken by the British in 1542, but restored to France upon the peace, 1550. Lord Nelson attacked Boulogne, disabling ten vessels, and sinking five, Aug. 3, 1801. Prince Louis Napoleon made a descent here with about fifty followers, Aug. 6, 1840.—See *next article* and *France*.

**BOULOGNE FLOTILLA**. This celebrated armament against England excited much attention for some years, but the grand demonstration was made in 1804. In that year, Bonaparte had assembled 160,000 men and 10 000 horses, and a flotilla of 1300 vessels and 17,000 sailors to invade England. The coasts of Kent and Sussex were covered with martello towers and lines of defence; and nearly half the adult population of Britain was formed into volunteer corps. It is supposed that this French armament served merely for a demonstration, and that Bonaparte never seriously intended the invasion.

**BOUNDARY QUESTIONS, IN THE UNITED STATES**. Award of the king of the Netherlands on the boundary between Maine and the British possessions, Jan. 10, 1831 (rejected by both parties). Collisions between the people of Maine and New Brunswick in the disputed territory on the Aroostock, 1838-9, suspended by a mutual agreement between sir J. Harvey, Governor of New Brunswick, governor Fairfield, of Maine, and general Scott, of the U. S. army, March 21, 1839. This boundary settled by the Treaty of Washington, 1842. Oregon boundary—49th parallel agreed upon as the northern boundary of the United States, in Oregon, by treaty signed at Washington, June 1846.

**BOUNTIES**. They were first granted on the exportation of British commodities—a new principle introduced into commerce by the British parliament. The first bounties granted on corn, were in 1688. First legally granted in England for raising naval stores in America, 1703. Bounties have been granted on sail-cloth, linen, and other goods.—*Elements of Commerce*.

**BOUNTY, MUTINEERS OF THE SHIP**. Memorable mutiny on board the *Bounty*, armed ship returning from Otaheite, with bread-fruit. The mutineers put their captain, Bligh, and nineteen men into an open boat, near Annamooka, one of the Friendly Islands, April 28, 1789, and they reached the Island of Timor, south of the Moluccas, in June, after a perilous voyage of nearly 4000 miles, in which their preservation was next to miraculous. The mutineers were tried Sept. 15, 1792, when six were condemned, of whom three were executed. See *Pitcairn's Island*.

**BOURBON, HOUSE OF**. Anthony de Bourbon was the chief of the branch of Bourbon, so called from a fief of that name which fell to them by marriage with the heiress of the estate. Henry IV. of France and Navarre, justly

styled the Great, was son of Anthony, and came to the throne in 1589. The crown of Spain was settled on a younger branch of this family, and guaranteed by the peace of Utrecht, 1713.—*Rapin*. The Bourbon Family Compact took place, 1761. The Bourbons were expelled France, 1791, and were restored, 1814. Re-expelled, and again restored, 1815. The elder branch was expelled once more, in the persons of Charles X. and his family in 1830, a consequence of the revolution of the memorably days of July in that year.—See *France*.

**BOURBON, ISLE OF**, discovered by the Portuguese, in 1545. The French first settled here in 1672, and built several towns. The island surrendered to the British, July 2, 1810. It is near the Isle of France, and the two are styled the Mauritius. There occurred an awful hurricane here in February 1829, by which immense mischief was done to the shipping, and in the Island. See *Mauritius*.

**BOURDEAUX** (or **BORDEAUX**) was united to the dominions of Henry II. of England, by his marriage with Eleanor of Aquitaine. Edward the Black Prince brought his royal captive, John, king of France, to this city after the battle of Poitiers, in 1356, and here held his court during eleven years: his son, Richard II., (of Eng.) was born at Bourdeaux, in 1362. The fine equestrian statue of Louis XV. was erected in 1743. Bourdeaux was entered by the victorious British army, after the battle of Orthes, fought Feb. 25, 1814.

**BOURIGNONISTS**, a sect founded by Madame *Antoinette Bourignon*, a fanatic, who, in 1658, took the habit of St. Augustin, and travelled into France, Holland, England, and Scotland. In the last she made a strong party and some thousands of sectarists, about 1670. She maintained that Christianity does not consist in faith or practice, but in an inward feeling and supernatural impulse. This visionary published a book entitled the *Light of the World*, in which, and in several other works, she maintained and taught her pernicious notions. A disciple of hers, named Court, left her a good estate. She died in 1680.

**BOWLS**, or **BOWLING**, an English game, played as early as the thirteenth century, and once in great repute among the higher ranks. Charles I. played at it. It formed a daily share in the diversions of Charles II., at Tunbridge.—*Mémoires de Grammont*.

**BOWS AND ARROWS**. See *Archery*. The invention of them is ascribed to Apollo. Known in England previous to A.D. 450. The use of them was again introduced into England by the Conqueror, 1066; and greatly encouraged by Richard I., 1190.—*Baker's Chronicle*. The usual range of the long bow was from 300 to 400 yards; the length of the bow was six feet, and the arrow three. Cross-bows were fixed to a stock of iron or wood, and were discharged by a trigger.

**BOXING**, or **PRIZE-FIGHTING**, the *pugilatus* of the Romans, and a favorite sport with the British, who possess an extraordinary strength in the arm, an advantage which gives the British soldier great superiority in battles decided by the bayonet. A century ago, boxing formed a regular exhibition, and a theatre was erected for it in Tottenham-court—Broughton's amphitheatre, behind Oxford-road, built 1742. Schools were opened in England to teach boxing as a science in 1790. Owing to the dishonest practices in the "ring," selling the victory, and one combatant allowing the other to beat him, &c., the fights have been fewer of late, and the number of the patrons of boxing have declined.

**BOYLE LECTURES**. Instituted by Robert Boyle (son of the great earl of Cork), an exceedingly good man and philosopher, distinguished by his genius, virtues, and unbounded benevolence. He instituted eight lectures in vindication of the Christian religion, which were delivered at St. Mary's

Bow church, on the first Monday in each month, from January to May, and September to November—endowed 1691.

BOYNE, BATTLE OF, between king William III. and his father-in-law, James II., fought July 1, 1690. The latter was signally defeated, his adherents losing 1500 men, and the Protestant army about a third of that number. James immediately afterwards fled to Dublin, thence to Waterford, and escaped to France. The duke of Schomberg was killed in the battle.

RABANT. It was erected into a duchy A. D. 620, and devolved upon Lambert I. count of Louvain, in 1005, and from him descended to Philip II. of Burgundy, and in regular succession to the emperor Charles V. In the seventeenth century it was held by Holland and Austria, as Dutch Brabant, and Walloon. These provinces underwent many changes in most of the great wars of Europe. The Austrian division was taken by the French 1746—again in 1794 by their Republic; and it now forms part of the kingdom of Belgium, under Leopold, 1831. See *Belgium*.

BRACELETS. They were early worn and prized among the ancients; we read of them in almost all nations; those that were called *armillæ* were usually distributed as rewards for valor among the Roman legions.—*Nouv. Dict.* Those of pearls and gold were worn by the Roman ladies; and armlets are female ornaments to the present day.

BRAGANZA, HOUSE OF, owes its elevation to royalty to a remarkable and bloodless revolution in Portugal, A. D. 1640, when the nation, throwing off the Spanish yoke, which had become intolerable, advanced John, duke of Braganza, to the throne, on which this family continues to reign.—*Abbé Vertot*.

BRAHMINS, a sect of Indian philosophers, reputed to be so ancient that Pythagoras is thought to have learned from them his doctrine of the *Metempsychosis*; and it is affirmed that some of the Greek philosophers went to India on purpose to converse with them. The modern Brahmins derive their name from Brahme, one of the three beings whom God, according to their theology, created, and with whose assistance he formed the world. They never eat flesh, and abstain from the use of wine and all carnal enjoyments.—*Strabo*. The modern Indian priests are still considered as the depositaries of the whole learning of India.—*Holwell*.

BRANDENBURGH, FAMILY OF, is of great antiquity, and some historians say it was founded by the Sclavonians, who gave it the name of *Banber*, which signifies *Guard of the Forests*. Henry I., surnamed the Fowler, fortified Brandenburg, A. D. 923, to serve as a rampart against the Huns. He bestowed the government on Sifroi, count of Ringelheim, with the title of Margrave, which signifies protector of the marches or frontiers, in 927. The emperor Sigismund gave perpetual investiture to Frederick IV. of Nuremberg, who was made elector in 1417. See *Prussia*.

BRANDYWINE, BATTLE OF, between the British royalist forces and the Americans, in which the latter were defeated with great loss, and Philadelphia fell to the possession of the victors, September 11, 1777.

BRASS. Its formation was prior to the Flood, and it was discovered in the seventh generation from Adam.—*Bible*. Brass was known among all the early nations.—*Usher*. The Britons from the remotest period were acquainted with its use.—*Whittaker*. When Lucius Mumonius burnt Corinth to the ground, 146 B. C., the riches he found were immense, and during the conflagration, it is said, all the metals in the city melted, and running together, formed the valuable composition since known under the name of *Corinthian Brass*. This, however, may well be doubted, for the Corinthian artists had long before obtained great credit for their method of combining gold

and silver with copper; and the Syriac translation of the Bible says, that Hiram made the vessels for Solomon's temple of Corinthian brass. Articles made of this brilliant composition, though in themselves trivial and insignificant, were yet highly valued.—*Du Fresnoy*.

**BRAZIL.** It was discovered by Alvarez de Cabral, a Portuguese, who was driven upon its coasts by a tempest in 1500. He called it the Land of the Holy Cross; but it was subsequently called Brazil on account of its red wood, and was carefully explored by Amerigo Vespucci, about 1504. The gold mines were first opened in 1684; and the diamond mines were discovered 1730 (see *Diamonds*). The French having seized on Portugal in 1807 the royal family and most of the nobles embarked for Brazil. A revolution took place here in 1821. Brazil was erected into an empire, when Dom Pedro assumed the title of emperor, in November 1825. He abdicated the throne of Portugal, May 2, 1826; and that of Brazil, in favor of his infant son, now emperor, April 7, 1831, and returned to Portugal, where a civil war ensued.—See *Portugal*.

**BREAD.** Ching-Noung, the successor of Fohi, is reputed to have been the first who taught men (the Chinese) the art of husbandry, and the method of making bread from wheat, and wine from rice, 1998 B. C.—*Univ. Hist.* Baking of bread was known in the patriarchal ages; see *Exodus* xii. 15. Baking bread became a profession at Rome, 170 B. C. During the siege of Paris by Henry IV., owing to the famine which then raged, bread, which had been sold whilst any remained for a crown a pound, was at last made from the bones of the charnel-house of the Holy Innocents, A. D. 1594.—*Henault*. In the time of James I. the usual bread of the poor was made of barley; and now in Iceland, cod-fish, beaten to powder, is made into bread; and the poor use potato-bread in many parts of Ireland. Earth has been eaten as bread in some parts of the world: near Moscow is a portion of land whose clay will ferment when mixed with flour. The Indians of Louisiana (?) eat a white earth with salt; and the Indians of the Orinooko eat a white unctuous earth.—*Greig*; *Phillips*.

**BREAKWATER AT PLYMOUTH.** The first stone of this stupendous work was lowered in the presence of the army and navy, and multitudes of the great, August 12, 1812. It was designed to break the swell at Plymouth, and stretches 5280 feet across the Sound; it is 360 feet in breadth at the bottom, and more than thirty at the top, and consumed 3,666,000 tons of granite blocks, from one to five tons each, up to April, 1841; and cost a million and a half sterling. The architect was Rennie. The first stone of the lighthouse on its western extremity was laid Feb. 1, 1841.

**BREAST-PLATES.** The invention of them is ascribed to Jason, 937 B. C. The breast-plate formerly covered the whole body, but it at length dwindled in the lapse of ages to the diminutive gorget of modern times. See *Armor*.

**BREDA.** This city was taken by prince Maurice of Nassau in 1590; by the Spaniards in 1625; and again by the Dutch in 1637. Charles II. resided here at the time of the Restoration, 1660. See *Restoration*. Breda was taken by the French in 1793, and retaken by the Dutch the same year. The French garrison was shut out by the burgesses in 1813, when the power of France ceased here.

**BREECHES.** Among the Greeks, this garment indicated slavery. It was worn by the Dacians, Parthians, and other northern nations; and in Italy, it is said, it was worn in the time of Augustus Cæsar. In the reign of Honorius, about A. D. 394, the *braccarii*, or breeches-makers, were expelled from Rome; but soon afterwards the use of breeches was adopted in other countries, and at length it became general.

**BREMEN**, a venerable Hanse town, and duchy, sold to George I. as elector of Hanover, in 1716. It was taken by the French in 1757; they were driven out by the Hanoverians in 1758; and it was again seized in 1806. Bremen was annexed by Napoleon to the French empire in 1810; but its independence was restored in 1813. See *Hanse Towns*.

**BRESLAU, BATTLE OF**, between the Austrians and Prussians, the latter under prince Bevern, who was defeated, but the engagement was most bloody on both sides, Nov. 22, 1757, when Breslau was taken; but was regained the same year. This city was for some time besieged by the French, and surrendered to them January 5, 1807, and again in 1813.

**BREST.** It was besieged by Julius Cæsar, 54 B. C.—possessed by the English, A. D. 1378—given up to the duke of Brittany, 1391. Lord Berkeley and a British fleet and army were repulsed here with dreadful loss in 1694. The magazine burnt, to the amount of some millions of pounds sterling, 1744. The marine hospitals, with fifty galley-slaves, burnt, 1766. The magazine again destroyed by a fire, July 10, 1784. From this great depot of the French navy, numerous squadrons were equipped against England during the late war.

**RETHREN IN INIQUITY.** The designation arose from persons covenanting formerly to share each other's fortune, in any expedition to invade a country, as did Robert de Oily and Robert de Ivery, in William I.'s invasion of England, 1066.

**BRETIGNY, PEACE OF**, concluded with France at Bretigny, and by which England retained Gascony and Guienne, acquired Saintonge, Agenois, Perigord, Limousin, Bigorre, Angoumois, and Roergne, and renounced her pretensions to Maine, Anjou, Touraine, and Normandy; England was also to receive 3,000,000 crowns, and to release king John, who had been long prisoner in London, May 8, 1360.

**BREVIARIES.** The breviary is a book of mass and prayer used by the church of Rome. It was first called the *custos*, and afterwards the breviary; and both the clergy and laity use it publicly and at home. It was in use among the ecclesiastical orders about A. D. 1080; and was reformed by the councils of Trent and Cologne, and by Pius V., Urban VIII., and other popes. The quality of type in which the breviary was first printed gave the name to the type called *brevier* at the present day.

**BREWERS.** The first are traced to Egypt. Brewing was known to our Anglo-Saxon ancestors.—*Tindal*. "One William Murle, a rich maultman or bruer, of Dunstable, had two horses all trapped with gold, 1414."—*Slowe*. There are about 1700 public brewers in England, about 200 in Scotland, and 250 in Ireland: these are exclusively of retail and intermediate brewers, of which there are in England about 1400; there are, besides, 28,000 victuallers, &c., who brew their own ale. In London, there are about 100 wholesale brewers, many of them in immense trade. Various statutes relating to brewers and the sale of beer have been enacted from time to time. See *Beer*.

**BRIBERY.** In England an indictable offence to bribe persons in the administration of public justice. Thomas de Weyland, a judge, was banished the land for bribery, in 1288; he was chief justice of the Common Pleas. William de Thorpe, chief justice of the King's Bench, was hanged for bribery in 1351. Another judge was fined 20,000*l.* for the like offence, 1616. Mr. Walpole, secretary-at-war, was sent to the tower for bribery in 1712. Lord Strangford was suspended from voting in the Irish House of Lords, for soliciting a bribe, January 1784.

**BRIBERY AT ELECTIONS**, as in the preceding cases, made an indictable offence. Messrs. Sykes and Rumbold fined and imprisoned for bribery at

an election, March 14, 1776. An elector of Durham convicted, July 1803 and several similar instances have occurred since.

**BRICKS**, for building, were used in the earliest times in Babylon, Egypt, Greece, and Rome. Used in England by the Romans, about A. D. 44. Made under the direction of Alfred the Great, about 886.—*Saxon Chron.* The size regulated by order of Charles I. 1625. Taxed, 1784. The number of bricks which paid duty in England in 1820 was 949,000,000; in 1830, the number exceeded 1,100,000,000; and in 1840 it amounted to 14,000,000,000. See *Building*.

**BRIDAL CEREMONIES**. Among the more rational ceremonies observed by the ancients, was the practice of conducting the bride to the house of her spouse on a chariot, which was afterwards burned; it originated with the Thebans, and was intended as a symbol of the bride's future dependence on her husband, from whom there was no chariot to convey her back to her parents; it is mentioned 880 B. C.

**BRIDEWELL**. Originally the name of a royal palace of king John, near Fleet-ditch, London; it was built anew by Henry VIII. in 1522, and was given to the city by Edward VI. in 1553. There are several prisons of this name throughout England. The first London Bridewell was in a locality near to Bride's well; but this is no reason, as is justly observed, why similar prisons, not in a similar locality, should have this name.

**BRIDGES**. So early and general, and the expedients for their construction so various, their origin cannot be traced; they were first of wood. The ancient bridges in China are of great magnitude, and were built of stone. Abydos is famous for the bridge of boats which Xerxes built across the Hellespont. Trajan's magnificent stone bridge over the Danube, 4770 feet in length, was built in A. D. 103. The Devil's bridge in the canton of Uri, so called from its frightful situation, was built resting on two high rocks, so that it could scarcely be conceived how it was erected, and many fabulous stories were invented to account for it. At Shaffhausen an extraordinary bridge was built over the Rhine, which is there 400 feet wide: there was a pier in the middle of the river, but it is doubtful whether the bridge rested upon it; a man of the lightest weight felt the bridge totter under him, yet wagons heavily laden passed over without danger. This bridge was destroyed by the French in 1799. Suspension bridge at Niagara Falls completed July 29, 1848.

**BRIDGES IN ENGLAND**. The ancient bridges in England were of wood, and were fortified with planks and merlined; the first bridge of Stone was built at Bow, near Stratford, A. D. 1087. Westminster bridge, then the finest erected in these realms, and not surpassed by any in the world, except in China, was completed in twelve years, 1750. The other London bridges are Blackfriars, completed 1770; London, (rebuilt) 1831; Southwark, of iron, 1819. The first iron bridge, on a large scale, was erected over the Severn, in Shropshire, 1779. The finest chain suspension bridge is that of the Menai Strait, completed in 1825. Hungerford suspension bridge, 1845.

**BRIDGEWATER CANAL**, the first great work of the kind in England, was begun by the duke of Bridgewater, styled the father of canal navigation in that country, in 1758: Mr. Brindley was the architect. The canal commences at Worsley, seven miles from Manchester; and at Barton-bridge is an aqueduct which, for upwards of 200 yards, conveys the canal across the navigable river Irwell; its length is twenty-nine miles.

**BRIEF**. A written instrument in the Catholic church, of early but uncertain date. Briefs are the letters of the pope dispatched to princes and others on public affairs, and are usually written short, and hence the name, and are without preface or preamble, and on paper; in which particulars they

distinguished from *bulls*. The latter are ample, and always written on parchment; a brief is sealed with red wax, the seal of the fisherman, or St. Peter in a boat, and always in presence of the pope; they are used for graces and dispensations, as well as business.

**RIENNE, BATTLE OF**, between the allied armies of Russia and Prussia, and the French, fought on the 1st, and resumed on the 2d February, 1814. The allies were defeated with great loss; this was one of the last battles in which the French achieved victory, previously to the fall of Napoleon.

**BRISTOL**. This city, one of the principal in England, was built by Brennus, a prince of the Britons, 880 B. C. It was granted a charter and became a distinct county in the reign of Edward III. Taken by the earl of Gloucester, in his defence of his sister Maude, the empress, against king Stephen, 1138. Bristol was attacked with great fury by the forces of Cromwell, 1655. Riot at Bristol, on the entrance of sir Charles Wetherell, the recorder, into the city, attended by a large police and special force, to open the sessions. He being politically obnoxious to the lower order of the citizens, a riot ensued, which was of several days' continuance, and which did not terminate until the mansion-house, the bishop's palace, several merchants' stores, some of the prisons (the inmates liberated), and nearly 100 houses were burned, and many lives lost, Oct. 29, 1831. Trial of the rioters, Jan. 2, 1832; four were executed, and twenty-two transported. Suicide of col. Brereton during his trial by court-martial, Jan. 9, same year.

**BRITAIN**. The earliest records of the history of this island are the manuscripts and poetry of the Cambrians. The Celts were the ancestors of the Britons and modern Welsh, and were the first inhabitants of Britain. Britain, including England, Scotland, and Wales, was anciently called Albion, the name of Britain being applied to all the islands collectively—Albion to only one.—*Pliny*. The Romans first invaded Britain under Julius Cæsar, 55 B. C., but they made no conquests. The emperor Claudius, and his generals, Plantius, Vespasian, and Titus, subdued several provinces after thirty pitched battles with the natives, A. D. 43 and 44. The conquest was completed by Agricola, in the reign of Domitian, A. D. 85.

|                                                                        |          |                                                                                                             |            |

| The Romans defeated by Boadicea; 70,000 slain, and London burnt        | 61       | The Saxon Heptarchy; Britain divided into seven kingdoms                                                    | 457        |
| A vast army of Britons is defeated by Suetonius, and 80,000 slain      | 61       | Reign of the renowned Arthur                                                                                | 506        |
| Reign of Lucius, the first Christian king of Britain, and in the world | 179      | Arrival of St. Augustin (or Austin), and establishment of Christianity                                      | 596        |
| Severus keeps his court at York, then called Eboracum                  | 207      | Cadwallader, last king of the Britons, began his reign                                                      | 678        |
| He dies at York                                                        | 211      | The Saxon Heptarchy ends                                                                                    | 828        |
| Carausius, a tyrant, usurps the throne of Britain                      | 286      | See <i>England</i> , and also <i>Tabular Views</i> , p. 75, &c.                                             |            |
| He is killed by Alectus, who continues the usurpation                  | 293      |                                                                                                             |            |
| Constantine recovers Britain by the defeat of Alectus                  | 296      |                                                                                                             |            |

That Britain formerly joined the Continent has been inferred from the similar cliffs of the opposite coasts of the English Channel, and from the constant encroachments of the sea in still widening the channel. For instance, a large part of the cliffs of Dover fell, estimated at six acres, Nov. 27, 1810. *Phillips's Annals*.

**BRITISH MUSEUM**. The origin of this great national institution was the

grant by parliament of 20,000*l.* to the daughters of sir Hans Sloane, in payment for his fine library, and vast collection of the productions of nature and art, which had cost him 50,000*l.* The library contained 50,000 volumes and valuable MSS., and 69,352 articles of vertu were enumerated in the catalogue of curiosities. The act was passed April 5, 1753; and in the same year Montagu-house was obtained by government as a place for the reception of these treasures. The museum has since been gradually increased to an immense extent by gifts, bequests, the purchase of every species of curiosity, MSS., sculpture and work of art, and by the transference to its rooms of the Cottonian, Harleian, and other libraries, the Elgin marbles, &c. George IV. presented to the museum the library collected at Buckingham-house by George III.—See *Cottonian Library, and other collections.*

**BROAD SEAL** of ENGLAND, first affixed to patents and other grants of the crown, by Edward the Confessor, A. D. 1048.—*Baker's Chron.*

**BROCADE.** A silken stuff variegated with gold or silver, and raised and enriched with flowers and various sorts of figures, originally made by the Chinese.—*Johnson.* The trade in this article was carried on by the Venetians.—*Anderson.* Its manufacture was established with great success at Lyons, in 1757.

**BROCOLI:** an Italian Plant.—*Pardon.* The white and purple, both of which are varieties of the cauliflower, were brought to England from the Isle of Cyprus, in the seventeenth century.—*Anderson.* About 1603.—*Burns.* The cultivation of this vegetable was greatly improved in the gardens of England and came into great abundance about 1680.—*Anderson.*

**BROKERS.** Those both of money and merchandise were known early in England. See *Appraisers.* Their dealings were regulated by law, and it was enacted that they should be licensed before transacting business, 8 and 9 William III. 1695-6. The dealings of stock-brokers were regulated by 6 George I. 1719, and 10 George II. 1736.—*Statutes at large.* See *Pawn-brokers.*

**BRONZE,** known to the ancients, some of whose statues, vessels, and various other articles, made of bronze, are in the British Museum. The equestrian statue of Louis XIV., 1699, in the Place Vendôme at Paris, (demolished Aug. 10, 1792,) was the most colossal ever made; it contained 60,000 lbs. weight of bronze. Bronze is two parts brass and one copper, and the Greeks added one fifteenth of lead and silver.

**BROTHELS,** were formerly allowed in London, and considered a necessary evil, under the regulation of a good police. They were all situated on the Bank-side, Southwark, and subject to the jurisdiction of the bishop of Winchester; and they were visited weekly by the Sheriff's officers, and the severest penalties being enacted against keeping infected or married women, 8 Henry II. 1162.—*Survey of London.* Brothels tolerated in France, 1280. Pope Sixtus IV. licensed one at Rome, and the prostitutes paid him a weekly tax which amounted to 20,000 ducats a year, 1471.—*Ital. Chron.*

**BROWNISTS,** a sect founded by a schoolmaster in Southwark, named Robert Brown, about 1615. It condemned all ceremonies and ecclesiastical distinctions, and affirmed that there was an admixture of corruptions in all other communions. But the founder subsequently recanted his doctrines for a benefice in the church of England.—*Collins's Eccles. Hist.*

**BRUCE'S TRAVELS** undertaken to discover the source of the Nile. The illustrious Bruce, the "Abyssinian Traveller," set out in June 1768, and proceeding first to Cairo, he navigated the Nile to Syene, thence crossed the desert to the Red Sea, and, arriving at Jidda, passed some months in Arabia Felix, and after various detentions, reached Gondar, the capital of Atj.

sinia, in Feb. 1770. On Nov. 14th, 1770, he obtained the great object of his wishes—a sight of the sources of the Nile. Bruce returned to England in 1773, and died in 1794.

**BRUNSWICK, HOUSE OF.** This house owes its origin to Azo, of the family of Este. Azo died in 1055, and left, by his wife Cunegonde (the heiress of Guelph III., duke of Bavaria), a son who was Guelph IV., the great-grandfather of Henry the Lion. This last married Maude, daughter of Henry II. of England, and is always looked upon as being the founder of the Brunswick family. The dominions of Henry the Lion were the most extensive of any prince of his time; but having refused to assist the emperor Frederick Barbarossa in a war against pope Alexander III., he drew the emperor's resentment on him, and in the diet of Wurtzburg, in 1179, he was proscribed. The duchy of Bavaria was given to Otho, from whom is descended the family of Bavaria; the duchy of Saxony, to Bernard Ascanius, founder of the house of Anhalt; and his other territories to different persons. On this, he retired to England; but on Henry's intercession, Brunswick and Lunenburg were restored to him. The house of Brunswick has divided into several branches. The present duke of Brunswick-Wolfenbützel is sprung from the eldest; the duke of Brunswick-Zell was from the second; and from this last sprang the royal family of England. A revolution took place at Brunswick, when the ducal palace was burnt, and the reigning prince obliged to retire and seek shelter in England, Sept. 8, 1830.

**BRUSSELS**, founded by St. Gery of Cambrai, in the seventh century. The memorable bombardment of this city by Marshal Villeroy, when 14 churches and 4000 houses were destroyed, 1695. Taken by the French, 1746. Again, by Dumouriez, 1792. The revolution of 1830 commenced here, Aug. 25.—See *Belgium*. This town is celebrated for its fine lace, camlets, and tapestry. There is here a noble building, called the *Hôtel de Ville*, whose turret is 364 feet in height; and on its top is a copper figure of St. Michael, 17 feet high, which turns with the wind. Riot in Brussels, in which the costly furniture of 16 principal houses was demolished, in consequence of a display of attachment to the house of Orange, 5th April, 1834.

**BUBBLE COMPANIES**, in commerce, a name given to projects for raising money upon false and imaginary grounds, much practised, often with disastrous consequences, in France and England, in 1719 and 1721. Many such projects were formed in England and Ireland in 1825. See *Companies*, and *Law's Bubble*.

**BUCCANEERS.** These piratical adventurers, chiefly French, English, and Dutch, commenced their depredations on the Spaniards of America, soon after the latter had taken possession of that continent and the West Indies. The principal commanders of the first expedition were, Montbar, Lolonois, Basco, and Morgan, who murdered thousands, and plundered millions. The expedition of Van Horn, of Ostend, was undertaken in 1603; that of Gramont, in 1685; and that of Pointis, in 1697.

**BUCHANITES.** Hundreds of deluded fanatics, followers of Margaret Buchan, who promised to conduct them to the new Jerusalem, and prophesied the end of the world. She appeared in Scotland in 1779, and died in 1791, when her followers dispersed.

**BUCHAREST, TREATY OF.** The preliminaries of peace ratified at this place between Russia and Turkey, it being stipulated that the Pruth should be the frontier limit of those empires, signed May 28, 1812. The subsequent war between those powers altered many of the provisions of this treaty.

**BUCKINGHAM PALACE, LONDON.** Buckingham-house, built 1703, was pulled down in 1825, and the new palace commenced on its site; and after

expenditure which must have approached a million sterling, it was completed, and was taken possession of by queen Victoria, July 13, 1837.

**BUCKLERS.** Those used in single combat were invented by Prætus and Acrius, of Argos, about 1370 B. C. When Lucius Papirius defeated the Samnites, he took from them their bucklers, which were of gold and silver, 309 B. C. See article *Armor*.

**BUCKLES.** The wearing of buckles commenced in the reign of Charles II.; but people of inferior rank, and such as affected plainness in their garb, wore strings in their shoes some years after that period: these last were, however, ridiculed for their singularity in using them.

**BUDA;** once called the Key of Christendom. It was taken by Solymán II. at the memorable battle of Mohatz, when the Hungarian king, Louis, was killed, and 200,000 of his subjects were carried away captives, 1526. Buda was sacked a second time, when the inhabitants were put to the sword, and Hungary was annexed to the Ottoman empire, 1540. Retaken by the Imperialists, and the Mahometans delivered up to the fury of the soldiers, 1686. See *Hungary*.

**BUENA VISTA, BATTLE OF,** between the American force, of about 5,000 men, under general Taylor and general Wool; and the Mexicans, about 20,000, under Santa Anna: the latter defeated with the loss of 2500 killed and wounded. American loss, 264 killed, 450 wounded. This victory securing to the Americans the whole of the northern provinces of Mexico, Feb. 22, 1847.

**BUENOS AYRES.** The capital was founded by Pedro Mendoza, in 1535. It was taken by the British under sir Home Popham, June 21, 1806; and was retaken, after an attack of three days, Aug. 12, the same year. The British suffered a great repulse here under general Whitelock, who was disgraced, July 6, 1807. Declaration of independence of this province, July 19, 1816: the treaty was signed February 1822. To put a stop to a war between Buenos Ayres and Monte Video, England and France blockaded the port of Buenos Ayres, Oct. 24, 1845; the troops of Buenos Ayres under general Rosas, defeated by the combined forces, Nov. 20, 1845.

**BUFFOONS.** These were originally mountebanks in the Roman theatres. The shows of the buffoons were discouraged by Domitian, and were finally abolished by Trajan, A. D. 98. Our ancient kings had *jesters*, who are described as being, at first, practitioners of indecent raillery and antic postures; they were employed under the Tudors. Some writers state that James I. converted the jesters into poet-laureates; but poet-laureates existed long before; Selden traces the latter to 1251.—*Warton*.

**BUILDING.** The first structures were of wood and clay, then of rough stone, and in the end the art advanced to polished marble. Building with stone was early among the Tyrians; and as ornaments and taste arose, every nation pursued a different system. The art of building with stone may be referred in England to Benedict, or Benet, a monk, about A. D. 670. The first bridge of this material in England was at Bow, in 1087. Building with brick was introduced by the Romans into their provinces. Alfred encouraged it in England, in 886. Brick-building was generally introduced by the earl of Arundel, about 1598, London being then almost built of wood. The increase of building in London was prohibited within three miles of the city gates by Elizabeth, who ordered that one family only should dwell in one house, 1580.

**BULGARIANS.** They defeat Justinian, A. D. 687; and are subdued by the emperor Basilus, in 1019. On one occasion, this emperor having taken 15,000 Bulgarians prisoners, he caused their eyes to be put out, leaving one eye only to every hundredth man, to enable him to conduct his country...

home. Bulgaria was governed by Roman dukes till 1186; subdued by Bajazet, 1396.—*Univ. Hist.* vol. xvii.

**BULL, or EDICT OF THE POPE.** This is an apostolical rescript, of ancient use, and generally written on parchment. The bull is, properly, the seal, deriving its name from *bullo*, and has been made of gold, silver, lead, and wax. On one side are the heads of Peter and Paul; and on the other, the name of the pope, and the year of his pontificate. The celebrated golden bull of the emperor Charles IV. was so called because of its golden seal; and was made the fundamental law of the German empire, at the diet of Nuremberg, A. D. 1356. Bulls denouncing queen Elizabeth and her abettors, and consigning them to hell-fire, accompanied the Spanish Armada, 1588.

**BULL-BAITING, or BULL-FIGHTING.** This atrociously criminal sport of Spain and Portugal is somewhat equivalent in those countries to the fights of the gladiators among the Romans. It is recorded as being an amusement at Stamford so early as the reign of John, 1209. Bull-running was a sport at Tutbury in 1374. In the *Sports of England*, we read of the "Easter fierce hunts, when foaming boars fought for their heads, and lusty bulls and huge bears were baited with dogs;" and near the *Clink*, London, was the Paris, or Bear Garden, so celebrated in the time of Elizabeth for the exhibition of bear-baiting, then a fashionable amusement. A bill to abolish bull-baiting was thrown out in the Commons, chiefly through the influence of the late Mr. Windham, who made a singular speech in favor of the custom, May 24, 1802.—*Butler*. It has since been declared illegal. See *Cruelty to Animals*. Bull-fights were introduced into Spain about 1260: abolished there, "except for pious and patriotic purposes," in 1784. There was a bull-fight at Lisbon, at Campo de Santa Anna, attended by 10,000 spectators, on *Sunday*, June 14, 1840.

**BULLETS.** Those of stone were in use A. D. 1514; and iron ones are first mentioned in the *Fæderæ*, 1550. Lead bullets were made before the close of the sixteenth century, and continue to be those in use in all nations for musketry. The cannon-ball in some Eastern countries is still of stone, instead of iron.—*Ashe*.

**BUNKER HILL, BATTLE OF,** (near Boston,) between the British under Howe, and the Americans under Prescott and Putnam, June 17, 1775. British loss, 1054 killed and wounded; American, 453. The latter obliged to retreat for want of powder. But this, the first important battle of the revolution, has always justly been regarded as a great victory for the American cause, and is so commemorated by the granite obelisk on the battle-ground, of which the corner-stone was laid by general La Fayette, in 1825. It was finished July 23, 1842, at the cost altogether of about \$100,000, raised by voluntary contributions. The height is 220 feet. Its completion celebrated by a procession, &c., and an oration by Daniel Webster; president Tyler and 50,000 people present, June 17, 1843.

**BONAPARTE'S EMPIRE OF FRANCE.** Napoleon Bonaparte, the most extraordinary man of modern times, ruled over France, and subdued most of the nations of the Continent, in the early part of the present century. See his various military and other achievements under their respective heads throughout the volume:—

| Napoleon born at Ajaccio, in Italy,                                               | Deposes the French directory, and becomes first consul |
| Aug. 15, 1769                                                                     | Nov. 9, 1799                                           |
| He first distinguishes himself in the command of the artillery at <i>Toulon</i> . | Sends overtures of peace to the king of England        |
| 1793                                                                              | Jan. 1, 1800                                           |
| He embarks for Egypt                                                              | His life attempted by an "infernal machine"            |
| May 10, 1798                                                                      | Dec. 24, 1800                                          |
| Is repulsed before Acre                                                           |                                                        |
| May 27, 1799                                                                      |                                                        |
| He returns from Egypt                                                             |                                                        |
| Aug. 23, 1799                                                                     |                                                        |

BUONAPARTE'S EMPIRE OF FRANCE, *continued.*

|                                                                                               |                |                                                                                                                                       |               |
|-----------------------------------------------------------------------------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------|---------------|
| Elected president of the Italian, late Cisalpine, republic                                    | Jan. 25, 1802  | Is defeated at Waterloo                                                                                                               | June 18, 1815 |
| Elected consul for 10 years                                                                   | May 8, 1802    | Returns to Paris                                                                                                                      | June 20, 1815 |
| Made first consul for life                                                                    | Aug. 2, 1802   | And abdicates in favor of his infant son                                                                                              | June 22, 1815 |
| Accepts the title of emperor from the senate in name of the people                            | May 18, 1804   | Intending to embark for America, he arrives at Rochefort                                                                              | July 3, 1815  |
| Crowned emperor by the pope                                                                   | Dec. 2, 1804   | He surrenders to Capt. Maitland, of the <i>Bellerophon</i>                                                                            | July 15, 1815 |
| Crowned king of Italy                                                                         | May 26, 1805   | Transferred at Torbay to the <i>Northumberland</i> , and sails for St. Helena                                                         | Aug. 8, 1815  |
| Divorced from the empress Josephine                                                           | Dec. 16, 1809  | Arrives at St. Helena (where it is decreed by the allied sovereigns he shall remain for life)                                         | Oct. 15, 1815 |
| Marries Maria Louisa                                                                          | April 7, 1810  | The family of Bonaparte excluded for ever from France by the law of amnesty                                                           | Jan. 12, 1816 |
| A son, the fruit of this marriage, born, and styled king of Rome                              | March 20, 1811 | Death of Bonaparte                                                                                                                    | May 5, 1821   |
| His overtures of peace to England rejected                                                    | April 14, 1812 | His will registered in England                                                                                                        | Aug. 1821     |
| [The reverses of Bonaparte now follow in quick succession.]                                   |                | His son, ex-king of Rome, dies                                                                                                        | July 22, 1822 |
| He renounces the thrones of France and Italy, and accepts of the Isle of Elba for his retreat | April 5, 1814  | The French chambers decree, with the consent of England, that the ashes of Napoleon be removed from St. Helena, and brought to France | May 12, 1840  |
| Embarks at Fréjus                                                                             | April 28, 1814 | They are exhumed                                                                                                                      | Oct. 16, 1840 |
| Arrives at Elba                                                                               | May 3, 1814    | The <i>Belle Poule</i> , French frigate, arrives at Cherbourg with the remains of Napoleon, in the care of the prince de Joinville    | Nov. 30, 1840 |
| Again appears in France; he quits Elba and lands at Cannes                                    | March 1, 1815  | They are interred with great solemnity in the Hôtel des Invalides                                                                     | Dec. 15, 1840 |
| Enters Lyons                                                                                  | March 10, 1815 |                                                                                                                                       |               |
| Arrives at Fontainebleau                                                                      | March 20, 1815 |                                                                                                                                       |               |
| Joined by all the army                                                                        | March 22, 1815 |                                                                                                                                       |               |
| The allies sign a treaty for his extermination                                                | March 25, 1815 |                                                                                                                                       |               |
| He abolishes the slave-trade                                                                  | March 29, 1815 |                                                                                                                                       |               |
| Leaves Paris for the army                                                                     | June 12, 1815  |                                                                                                                                       |               |

**BURGESS**, from the French *Bourgeois*, a distinction coeval in England with its corporations. Burgesses were called to parliament in England A. D. 1265; in Scotland, in 1326; and in Ireland, about 1365. Burgesses to be resident in the places which they are elected to represent in parliament, 1 Henry V. 1413.—*Viner's Statutes*. See *Borough*.

**BURGLARY**. Until the reign of George IV. this crime, in England, was punished with death.

**BURGOS, SIEGE OF**. Wellington entered Burgos after the battle of Salamanca, which was fought July 22, 1812, and the castle was besieged by the British and allied army, and several attempts were made to carry it by assault, but the siege was abandoned in October, same year. The castle and fortifications were blown up by the French in June 1813.

**BURGUNDY**. This kingdom begins in Alsace, A. D. 413. Conrad II. of Germany being declared heir to the kingdom, is opposed in his attempt to annex it to the empire, when it is dismembered, and on its ruins are formed the four provinces of Burgundy, Provence, Viennes, and Savoy, 1034. Burgundy becomes a circle of the German empire, 1521. It falls to Philip II. of Spain, whose tyranny and religious persecutions cause a revolt in the Batavian provinces, 1566. After various changes, Burgundy annexed to France, and formed into departments of that kingdom.

**BURIAL**. The earliest and most rational mode of restoring the body to earth. The first idea of it was formed by Adam, on his observing a live bird covering a dead one with leaves. Barrows were the most ancient graves. See *Barrows*. Places of burial were consecrated under pope Calixtus I. in 210.—*Eusebius*. The first Christian burial-place was instituted in 596; burial in cities, 742; in consecrated places, 750; in church-yards, 758. Vaults were erected in chancels first at Canterbury, 1075. Woollen shrouds used in England, 1666. Linen scarfs introduced at funerals in Ireland, 1729; and woollen shrouds used, 1733. Burials were taxed, 1695—again, 1673.. See *Cemeteries*.

**BURIALS**. Parochial registers of them, and of births and marriages, were in

stituted in England by Cromwell, Lord Essex, about 1536.—*Stowe*. A tax was exacted on burials in England: for the burial of a duke, £50, and for that of a common person 4s., under William III., 1695, and Geo. III. 1783.—*Statutes*. See *Bills of Mortality*.

**BURKING.** A new and horrible species of murder committed in England. It was thus named from the first known criminal by whom the deed was perpetrated being called *Burke*. His victims were strangled, or made lifeless by pressure, or other modes of suffocation, and the bodies, which exhibited no marks of violence, were afterwards sold to the surgeons for the purpose of dissection. Burke was executed at Edinburgh in February, 1829. The crime has been more recently perpetrated by a gang of murderers in London. The monster named *Bishop* was apprehended in November 1831, and executed with *Williams*, one of his accomplices, for the murder of a poor Italian boy, named Carlo Ferrari, a friendless wanderer, and therefore selected as being less likely to be sought after (they confessing to this and other similar murders), December 5, same year.

**BURMESE EMPIRE.** Founded in the middle of the last century, by Alompra, the first sovereign of the present dynasty.—See *India*.

**BURNING ALIVE.** This punishment was inflicted among the Romans, Jews, and other nations, on the betrayers of councils, incendiaries, and for incest in the ascending and descending degrees. The Jews had two ways of burning alive: one with wood and faggots to burn the body, the other by pouring scalding lead down the throat of the criminal, *combustio animæ*, to burn the soul.—See *Suttees*.

**BURNING ALIVE, IN ENGLAND.** Even in England (see *preceding article*) burning alive was a punishment upon the statute-book. The Britons punished heinous crimes by burning alive in wicker baskets. See *Stonchenge*. This punishment was countenanced by bulls of the pope; and witches suffered in this manner.—See *Witches*. Many persons have been burned alive on account of religious principles. The first sufferer was sir William Sawtree, parish priest of St. Osith, London, 3 Henry IV., February 9, 1401. In the reign of the cruel Mary numbers were burned, among others, Ridley, bishop of London; Latimer, bishop of Rochester; and Crammer, archbishop of Canterbury, who were burned at Oxford in 1555 and 1556. Numerous others suffered this dreadful death in Mary's reign.\*

**BURNING THE DEAD.** The antiquity of this custom rises as high as the Theban war; it was practised among the Greeks and Romans, and the poet Homer abounds with descriptions of such funeral obsequies. The practice was very general about 1225 B. C., and was revived by Sylla, lest the relics of the dead in graves should be violated; and to this day the burning of the dead is practised in many parts of the East and West Indies.

**BURNING-GLASS AND CONCAVE MIRRORS.** Their power was not unknown to Archimedes, but the powers of these instruments are rendered wonderful by the modern improvements of Settalla: of Tschirnhausen, 1680; of Buffon, 1747; and of Parker and others, more recently. The following are experiments of the fusion of substances made with Mr. Parker's lens, or burning mirror:

---

\* It is computed, that during the three years of Mary's reign in which these shocking violences and barbarities were carried on, there were 277 persons brought to the stake; besides those who were punished by imprisonment, fines, and confiscations. Among those who suffered by fire were 1 bishops, 21 clergymen, 8 lay gentlemen, 84 tradesmen, 100 husbandmen, servants, and laborers, 55 women, and 4 children. The unprincipled agents of this merciless queen were the bishops Gardiner and Bonner. The latter especially was a man of brutal character, who seemed to derive a vague pleasure in witnessing the torture of the sufferers.

BURNING-GLASS AND CONCAVE MIRRORS, *continued.*

| <i>Substances fused.</i> | <i>Weight.</i> | <i>Time.</i> | <i>Substances fused.</i> | <i>Weight.</i> | <i>Time.</i> |
|--------------------------|----------------|--------------|--------------------------|----------------|--------------|
| Pure gold - - -          | 20 grains      | 4 seconds.   | A topaz - - -            | 3 grains       | 45 seconds.  |
| Silver - - -             | 20 grains      | 3 seconds.   | An emerald - - -         | 2 grains       | 25 seconds.  |
| Copper - - -             | 33 grains      | 20 seconds.  | A crystal pebble - -     | 7 grains       | 6 seconds.   |
| Platina - - -            | 10 grains      | 3 seconds.   | Flint - - -              | 10 grains      | 30 seconds.  |
| Cast iron - - -          | 10 grains      | 3 seconds.   | Cornelian - - -          | 10 grains      | 75 seconds.  |
| Steel - - -              | 10 grains      | 12 seconds.  | Pumice stone - - -       | 10 grains      | 24 seconds.  |

Green wood takes fire instantaneously; water boils immediately; bones are calcined; and things, not capable of melting, at once become red-hot like iron.

**BURYING ALIVE.** A mode of death adopted in Bœotia, where Creon ordered Antigone, the sister of Polynices, to be buried alive, 1225 B. C. The Roman vestals were subjected to this horrible kind of execution for any levity in dress or conduct that could excite a suspicion of their virtue. The vestal Minutia was buried alive on the charge of incontinence, 337 B. C. The vestal Sextilia was buried alive 274 B. C. The vestal Cornelia A. D. 92. Lord Bacon gives instances of the resurrection of persons who had been buried alive; the famous Duns Scotus is of the number. The assassins of Capo d'Istria, President of Greece, were (two of them) sentenced to be immured in brick walls built around them up to their chins, and to be supplied with food in this species of torture until they died, October, 1831.—See *Greece*.

**BUSTS.** This mode of preserving the remembrance of the human features is the same with the *hermæ* of the Greeks. Lysistratus, the statuary, was the inventor of moulds from which he cast wax figures, 328 B. C.—*Pliny*. Busts from the face in plaster of Paris were first taken by Andrea Verrochi, about A. D. 1466.—*Vasari*.

**BUTCHERS.** Among the Romans there were three classes: the *Suarii* provided hogs, the *Boarii* oxen, and the *Lanvi*, whose office was to kill. The butchers' trade is very ancient in England; so is their company in London, although it was not incorporated until the second year of James I. 1604.—*Annals of London*.

**BUTTER.** It was late before the Greeks had any notion of butter, and by the early Romans it was used only as a medicine—never as food. The Christians of Egypt burnt butter in their lamps, instead of oil, in the third century. In 1675, there fell in Ireland, during the winter time, a thick yellow dew, which had all the medicinal properties of butter. In Africa, vegetable butter is made from the fruit of the shea tree, and is of richer taste, at Kebba, than any butter made from cow's milk.—*Mungo Park*.

**BUTTONS,** of early manufacture in England; those covered with cloth were prohibited by a statute, thereby to encourage the manufacture of metal buttons, 8 George I. 1721. The manufacture owes nothing to encouragement from any quarter of late years, although it has, notwithstanding, much improved.—*Phillips*.

**BYRON'S VOYAGE.** Commodore Byron left England, on his voyage round the globe, June 21, 1764, and returned May 9, 1766. In his voyage he discovered the populous island in the Pacific Ocean which bears his name, August 16, 1765. Though brave and intrepid, such was his general ill fortune at sea, that he was called by the sailors of the fleet, "Foul-weather Jack."—*Bellchambers*.

**BYZANTIUM.** Now Constantinople, founded by a colony of Athenians, 715 B. C.—*Eusebius*. It was taken by the Romans, A. D. 73, and was laid in ruins by Severus in 196. Byzantium was rebuilt by Constantine in 338; and after him it received the name of Constantinople. See *Constantinople*.

C.

**CABAL.** A Hebrew word, used in various senses. The rabbins were cabalists, and the Christians so called those who pretended to magic. In English history, the Cabal was a council which consisted of five lords in administration, supposed to be pensioners of France, and distinguished by the appellation of the *Cabal*, from the initials of their names: Sir Thomas Clifford, the lord Ashley, the duke of Buckingham, lord Arlington, and the duke of Lauderdale, 22 Charles II. 1670.—*Hume*.

**CABINET COUNCIL.** There were councils in England so early as the reign of Ina, king of the West Saxons, A. D. 690; Offa, king of the Mercians, 758, and in other reigns of the Heptarchy. The cabinet council, in which secret deliberations were held by the king and a few of his chosen friends, and the great officers of state, to be afterwards laid before the second council, now styled the privy council, was instituted by Alfred the Great, about A. D. 896. *Spelman*. The modern cabinet council, as at present constituted, was reconstituted in 1670, and usually consists of the following twelve members:\*

|                              |                                                   |
|------------------------------|---------------------------------------------------|
| Lord president.              | Home, foreign, and colonial secretaries of state. |
| Lord chancellor.             | President of the board of control.                |
| Lord privy seal.             | President of the board of trade.                  |
| First lord of the treasury.  | Master of the mint.                               |
| Chancellor of the exchequer. | First lord of the admiralty.                      |

In 1841 the number was 14, and included the Secretary at War, the Woods and Forests, and Chief Secretary for Ireland, the Mint and the Board of Trade being united in right hon. H. Labouchere. The cabinet ministers of the various reigns will be found under the head *Administrations of England*.

**CABLES.** Their use was known in the earliest times: a machine for making the largest, by which human labor was reduced nine-tenths, was invented in 1792. This machine was set in motion by sixteen horses, when making cables for ships of large size. Chain cables were introduced into the British navy in 1812.

**CADDEE, OR LEAGUE OF GOD'S HOUSE.** The celebrated league of independence in Switzerland, formed by the Grisons, to resist domestic tyranny, A. D. 1400 to 1419. A second league of the Grisons was called the Grise or Gray league, 1424.

**CADDE'S INSURRECTION.** Jack Cade, an Irishman, a fugitive from his country on account of his crimes, assumed the name of Mortimer, and headed 20,000 Kentish men, who armed "to punish evil ministers, and procure a redress of grievances." Cade entered London in triumph, and for some time bore down all opposition, and beheaded the lord treasurer, Lord Saye, and several other persons of consequence. The insurgents at length losing ground, a general pardon was proclaimed; and Cade, finding himself deserted by his followers, fled: but a reward being offered for his apprehension, he was discovered, and refusing to surrender, was slain by Alexander Iden, sheriff of Kent, 1451.

**CADIZ,** formerly Gades, was built by the Carthaginians 530 B. C.—*Priestley*. One hundred vessels of the armament preparing, as the Spanish Armada,

---

\* The term *cabinet council* is of comparatively modern date, and originated thus: the affairs of state, in the reign of Charles I. were principally managed by the archbishop of Canterbury, the earl of Strafford, and the lord Cottington; to these were added the earl of Northumberland, for ornament; the bishop of London for his place, being lord treasurer; the two secretaries, Vane and Windebank, for service and intelligence; only the marquis of Hamilton, by his skill and interest, meddled just so far, and no further, than he had a mind. These persons made up the committee of state, reproachfully called the *junto*, and afterwards, enviously, the *cabinet council*.—**LORD CLARENDON**.

against England, were destroyed in the port by sir Francis Drake, 1587. Cadiz was taken by the English, under the earl of Essex, and plundered, September 15, 1596. It was attempted by sir George Rooke in 1702, but he failed. Bombarded by the British in 1797, and blockaded by their fleet, under lord St. Vincent, for two years, ending in 1799. Again bombarded by the British, on board whose fleet were 18,000 land forces, October 1800. Besieged by the French, but the siege raised after the battle of Salamanca in 1812. Massacre of the inhabitants by the soldiery, March 10, 1820. Cadiz was declared a free port in 1829.

**CÆSARS, ERA OF THE; OR SPANISH ERA,** is reckoned from the first of January 38 B. C., being the year following the conquest of Spain by Augustus. It was much used in Africa, Spain, and the south of France; but by a synod held in 1180 its use was abolished in all the churches dependent on Barcelona. Pedro IV., of Arragon, abolished the use of it in his dominions in 1350. John of Castile did the same in 1383. It continued to be used in Portugal till 1455. The months and days of this era are identical with the Julian calendar, and to turn the time into that of our era, subtract thirty-eight from the year; if before the Christian era subtract thirty-nine.

**CAL-FONG,** in China. This city being besieged by 100,000 rebels, the commander of the forces who was sent to its relief, in order to drown the enemy, broke down its embankments: his stratagem succeeded, and every man of the besiegers perished; but the city was at the same time overflowed by the waters, and 300,000 of the citizens were drowned in the overwhelming flood, A. D. 1642.

**CAIRO, OR GRAND CAIRO.** The modern capital of Egypt, remarkable for the minarets of its mosques, and the splendid sepulchres of its caliphs in what is called the city of the dead: it was built by the Saracens, in A. D. 969. Burnt to prevent its occupation by the Christian invaders, called Crusaders, in 1220. Taken by the Turks from the Egyptian sultans, and their empire subdued, 1517. Ruined by an earthquake and a great fire, June, 1754, when 40,000 persons perished. Set on fire by a lady of the beglerbeg, Dec., 1755. Taken by the French under Napoleon Bonaparte, July 23, 1798. Taken by the British and Turks, when 6000 French capitulated, June 27, 1801.

**CALAIS.** Taken by Edward III. after a year's siege, Aug. 4, 1347, and held by England 210 years. It was retaken in the reign of Mary, Jan. 7, 1558, and the loss of Calais so deeply touched the queen's heart, historians say it occasioned her death, which occurred soon afterwards. Calais was bombarded by the English, 1694. Here Louis XVIII. landed after his long exile from France, April 24, 1814. See *France*.

**CALCUTTA.** The first settlement of the English here was made in 1639. It was purchased as a Zemindary, and Fort William built in 1698. Calcutta was attacked by a large army of 70,000 horse and foot, and 400 elephants, in June, 1756. On the capture of the fort, 146 of the British were crammed into the Black-hole prison, a dungeon about 18 feet square, from whence twenty-three only came forth the next morning alive. Calcutta was retaken the following year, and the inhuman Soubah put to death. Supreme court of Judicature established 1773. College founded here 1801.—See *Bengal and India*.

**CALEDONIA.** Now *Scotland*. The name is supposed by some to be derived from *Gael* or *Gaelmen*, or *Gadel-doine*, corrupted by the Romans. Tacitus, who died A. D. 99, distinguishes this portion of Britian by the appellation of *Caledonia*; but the etymology of the word seems undetermined. Venerable Bede says, that it retained this name until A. D. 258, when it was invaded by a tribe from Ireland, and called *Scotia*. The ancient inhabitants appear

to have been the Caledonians and Picts, tribes of the Celts, who passed over from the opposite coasts of Gaul. About the beginning of the fourth century of the Christian era, they were invaded (as stated by some authorities), by the Scythians or Scythians (since called Scots), who, having driven the Picts into the north, settled in the Lowlands, and gave their name to the whole country. Hence the origin of that distinction of language, habits, customs, and persons, which is still so remarkable between the Highlanders and the inhabitants of the southern borders.

|                                                                                                                           |           |                                                                                                                                                                                                    |            |
|---------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| Caledonian monarchy, said to have been founded by Fergus I., about                                                        | B. C. 330 | The country is invaded by the Scythians, or Scots, and the government is overthrown, about                                                                                                         | A. D. 306  |
| The Picts from the north of England settle in the southern borders                                                        | 140       | The Caledonian monarchy is revived by Fergus II.                                                                                                                                                   | 404        |
| Agricola carries the Roman arms into Caledonia, with little success, in the reign of Galdus, otherwise called Corbred II. | A. D. 79  | After many sanguinary wars between the Caledonians, Picts, and Scots, Kenneth II. obtains a victory over the Picts, unites the whole country under one monarchy, and gives it the name of Scotland | 838 to 843 |
| He is signally defeated by the forces of Corbred                                                                          | 80        | See SCOTLAND.                                                                                                                                                                                      |            |
| Christianity is introduced into Caledonia in the reign of Donald I.                                                       | 201       |                                                                                                                                                                                                    |            |

The origin of the Scots, it should be stated, is very uncertain; and the history of the country until the eleventh century, when Malcolm III., surnamed Canmore, reigned (1057) is obscure, and intermixed with many and improbable fictions.

**CALEDONIAN CANAL**, from the North Sea to the Atlantic Ocean. By means of this magnificent canal, the nautical intercourse between the western ports of Great Britain, and those also of Ireland, to the North Sea and Baltic, is shortened in some instances 800, and in others, 1000 miles. A sum exceeding a million sterling was granted by parliament from time to time; and this safe navigation for ships of nearly every tonnage was completed, and opened in 1822.

**CALENDAR**. The Roman calendar, which has in great part been adopted by almost all nations, was introduced by Romulus, who divided the year into ten months, comprising 304 days, A. D. 738 B. C. The year of Romulus was of fifty days less duration than the lunar year, and of sixty-one less than the solar year, and its commencement did not, of course, correspond with any fixed season. Numa Pompilius, 713 B. C. corrected this calendar, by adding two months; and Julius Cæsar, desirous to make it more correct, fixed the solar year as being 365 days and six hours, 45 B. C. This almost perfect arrangement was denominated the Julian style, and prevailed generally throughout the Christian world till the time of pope Gregory XIII. The calendar of Julius Cæsar was defective in this particular, that the solar year consisted of 365 days, five hours, and forty-nine minutes: and not of 365 days six hours. This difference, at the time of Gregory XIII. had amounted to ten entire days, the vernal equinox falling on the 11th, instead of the 21st of March. To obviate this error, Gregory ordained, in 1582, that that year should consist of 365 days only; and to prevent further irregularity, it was determined that a year beginning a century should not be bissextile, with the exception of that beginning each fourth century: thus, 1700 and 1800 have not been bissextile, nor will 1900 be so; but the year 2000 will be a leap year. In this manner three days are retrenched in 400 years, because the lapse of eleven minutes makes three days in about that period. The year of the calendar is thus made as nearly as possible to correspond with the true solar year; and future errors of chronology are avoided. See *New Style*.

**CALICO**. The well-known cotton cloth, is named from Calicut, a city of India, which was discovered by the Portuguese, in 1498. Calico was first brought to England by the East India Company, in 1631. Calico printing, and the

Dutch loom engine, were first used in 1676.—*Anderson*. Calicoes were prohibited to be printed or worn, in 1700; and again, in 1721. They were first made a branch of manufacture in Lancashire, in 1771. See *Cotton*.

**CALIFORNIA, LOWER**, discovered by Grigalon, sent by Cortes, the conqueror of Mexico, 1534; explored by Cortes himself, 1536, and by his subordinate Ulloa, 1538. First settlement by Viscaino and a small colony sent out by Philip II. of Spain, 1596. Viscaino explored the coast and founded St. Diego and Monterey, and was the first *Spaniard* in *Upper California*, 1602.

**CALIFORNIA, UPPER**, discovered by sir Francis Drake, and named New Albion, 1596. The Spanish colonists having been expelled by the ill-used natives, the country was granted by Charles II. of Spain to the Jesuits, in 1697. Jesuit missions and *Presidios* established in New California 1769. Eighteen missions established up to 1798. California a province of Mexico, 1824; the Mexican governor expelled from Monterey, 1836. California explored by the United States expedition, under Wilkes, co-operating with that of Fremont, overland, in 1841-3. Another expedition under Fremont, 1845-6. Mexican war began 1845. San Francisco taken possession of by Com. Montgomery, July 8, 1845. Com. Stockton takes possession of Upper California May-August, 1846, and institutes United States military government. Movements of general Kearney, lieutenant Emory, &c., 1846. California secured to the United States by the treaty with Mexico, 1848. Gold placers first discovered on the grounds of captain Suter, February, 1848. Great emigration from the United States commenced November, 1848. Convention at Monterey for forming a state constitution, Aug. 31, 1849. Constitution adopted by popular vote, and P. H. Burnett chosen first governor, Dec. 1849.

**CALIPH**. In Arabic, vicar, or apostle; the title assumed by the Sophi of Persia, in the succession of Ali, and by the Grand Seigniors as the successors of Mahomet. The caliphate was adopted by Abubeker, the father of the Prophet's second wife, in whose arms he died, A. D. 631. In process of time the soldans or sultans engrossed all the civil power, and little but the title was left to the caliphs, and that chiefly in matters of religion.—*Sir. T. Herbert*.

**CALLIGRAPHY**. Beautiful writing, in a small compass, invented by Calliocrates, who is said to have written an elegant distich on a sesamum seed, 472 B. C. The modern specimens of this art are, many of them, astonishing and beautiful. In the sixteenth century, Peter Bales wrote the Lord's Prayer, creed, decalogue, two short Latin prayers, his own name, motto, day of the month, year of our Lord, and of the reign of queen Elizabeth, to whom he presented it at Hampton-court, all within the circle of a silver penny, encased in a ring and border of gold, and covered with crystal, so accurately done as to be plainly legible, to the great admiration of her majesty, the whole of the privy council, and several ambassadors then at court, 1574.—*Holinshed*.

**CALLAO, IN PERU**. Here, after an earthquake, the sea retired from the shore, and returned in mountainous waves, which destroyed the city, A. D. 1687. The same phenomenon took place in 1746, when all the inhabitants perished, with the exception of one man, who was standing on an eminence, and to whose succor a wave providentially threw a boat.

**CALOMEL**. The mercurial compound termed calomel is first mentioned by Crolius, early in the seventeenth century, but must have been previously known. The first directions given for its preparation were those announced by Beguin, in 1668. It is said that corrosive sublimate was known some centuries before.

**CALVARY, MOUNT.** The place where the REDEEMER suffered death, A. D. 33. Calvary was a small eminence or hill adjacent to Jerusalem, appropriated to the execution of malefactors. See *Luke* xxiii. 33. Adrian at the time of his persecution of the Christians erected a temple of Jupiter on Mount Calvary, and a temple of Adonis on the manger at Bethlehem, A. D. 142. Here is the church of the Holy Sepulchre, whither pilgrims flock from all Christian countries.

**CALVINISTS.** Named after their founder, John Calvin, the celebrated reformer of the Christian church from the Romish superstition and doctrinal errors. Calvin was a native of Noyon, in Picardy; but adopting the principles of the Reformers, he fled to Angoulême, where he composed his *Institutio Christianæ Religionis*, in 1533, published about two years afterwards. He subsequently retired to Basle, and next settled in Geneva. Although he differed from Luther in essential points, still his followers did not consider themselves as different on this account from the adherents of Luther. A formal separation first took place after the conference of Poissy, in 1561, where they expressly rejected the tenth article of the confession of Augsburg, besides some others, and took the name of Calvinists.

**CAMBRAY.** The town whence the esteemed manufacture called cambric takes its name. This city was taken by the Spaniards by a memorable surprise, in 1595. Cambray was taken and retaken several times. In the war of the French revolution it was invested by the Austrians, August 8, 1793, when the republican general, Declay, replied to the Imperial summons to surrender, that "he knew not how to do *that*, but his soldiers knew how to fight." In the late war it was seized by the British under general sir Chas. Colville, June 24, 1815. The citadel surrendered the next day, and was occupied by Louis XVIII. and his court.

**CAMBRAY, LEAGUE OF.** This was the celebrated league against the republic of Venice, comprising the pope, the emperor, and the kings of France and Spain; and whereby Venice was forced to cede to Spain her possessions in the kingdom of Naples, entered into Dec. 10, 1508.

**CAMBRICS.** A fabric of fine linen used for ruffles.—*Shakspeare*. Cambrics were first worn in England, and accounted a great luxury in dress, 22 Elizabeth, 1580.—*Stowe*. The importation of them was restricted, in 1745; and was totally prohibited by statute of 32 George II. 1758. Readmitted in 1786, but afterwards again prohibited: the importation of cambrics is now allowed.

**CAMBRIDGE,** once called Granta, and of most ancient standing, being frequently mentioned in the earliest accounts of the oldest British historians. Roger de Montgomery destroyed it with fire and sword to be revenged of king William Rufus. The university is said to have been commenced by Sigebert, king of East Angles, about A. D. 631; but it lay neglected during the Danish invasions, from which it suffered much. Cambridge now contains thirteen colleges and four halls, of which first, Peter-house is the most ancient, and King's College the noblest foundation in Europe, and the chapel one of the finest pieces of Gothic architecture in the world.

**CAMERA LUCIDA.** Invented by Dr. Hooke, about 1674.—*Wood's Ath. Ox.* Also an instrument invented by Dr. Wollaston, in 1807. The camera obscura, or dark chamber, was invented, it is believed, by the celebrated Roger Bacon, in 1297; it was improved by Baptista Porta, the writer on natural magic, about 1500.—*Moreri*. Sir I. Newton remodelled it. By the recent invention of M. Daguerre, the pictures of the camera are rendered permanent; the last was produced in 1839.

**CAMERONIANS.** A sect in Scotland which separated from the Presbyterians, and continued to hold their religious meetings in the fields.—*Burnet*.

**CAMP.** All the early warlike nations had camps, which are consequently most ancient. The disposition of the Hebrew encampment was, we are told, at first laid out by God himself. The Romans and Gauls had intrenched camps in open plains; and vestiges of such Roman encampments are existing to this day in numerous places in England and Scotland. The last camp in England was formed at Hyde Park in 1745.

**CAMPEACHY-BAY.** Discovered about A. D. 1520; it was taken by the English in 1659; and was taken by the Buccaneers, in 1678; and by the freebooters of St. Domingo, in 1685. These last burnt the town and blew up the citadel. The English logwood cutters made their settlement here, in 1662.

**CAMPERDOWN, BATTLE OF.** Memorable engagement off Camperdown, south of the Texel, and signal victory obtained by the British fleet under admiral Duncan, over the Dutch fleet, commanded by admiral de Winter; the latter losing fifteen ships, which were either taken or destroyed, Oct. 11, 1797.

**CAMPO FORMIO, TREATY OF,** concluded between France and Austria, the latter power yielding the Low Countries and the Ionian Islands to France, and Milan, Mantua, and Modena to the Cisalpine republic. This memorable and humiliating treaty resulted from the ill success of Austria on the Rhine. By a secret article, however, the emperor took possession of the Venetian dominions in compensation for the Netherlands, Oct. 17, 1797.

**CANADA.** This country was discovered by John and Sebastian Cabot, A. D. 1499, and was settled by the French, in 1608, but it had been previously visited by them. Canada was taken by the English, in 1628, but was restored in 1631. It was again conquered by the English, in 1759, and was confirmed to them by the peace of 1763. This country was divided into two provinces, Upper and Lower Canada, in 1791; and it was during the debates on this bill in the British parliament, that the quarrel between Mr. Burke and Mr. Fox arose.

**CANADIAN INSURRECTION.** The Papineau rebellion commenced at Montreal, Dec. 6, 1837. The Canadian rebels came to an engagement at St. Eustace, Dec. 14, following. The insurgents surrounded Toronto, and were repulsed by the governor, sir Francis Head, Jan. 5, 1838. Lord Durham, governor general, Jan. 16, 1838. Lount and Mathews hanged as traitors, April 12, 1838. Lord Durham resigned, Oct. 9, 1838. Rebellion again manifested itself in Beauharnais, Nov. 3, 1838. The insurgents concentrated at Napierville under command of Nelson and others, Nov. 6; some skirmishes took place, and they were routed with the loss of many killed and several hundred prisoners. Sir John Colborne announced the suppression of the rebellion in his dispatches dated Nov. 17, 1838. Lord Gosford, governor of Lower Canada, proclaims martial law, and a reward of £1,000 for Papineau, Dec. 5, 1837. MLeod (charged with the destruction of the *Caroline*, American steamer, at Schlosser, Dec. 30, 1837) acquitted at Utica, Oct. 12, 1841. President Van Buren's proclamation warning citizens of the United States against meddling with the Canadian insurrection. Sir Charles Metcalfe, governor-general, 1844. Earl of Elgin appointed governor-general, took the oath, Jan. 30, 1847. Riots at Montreal, and burning of the Parliament House by a mob (caused by the dissatisfaction about the act for paying losses by the late rebellion to some of the rebels themselves), Aug. 15, 1849. Movements in favor of annexation to the United States. Warning against such movements as high treason, proclaimed in the dispatch of earl Grey, the British colonial secretary, Feb. 1850.

**CANALS.** The most stupendous in the world is a canal in China, which passes over 2000 miles, and to 41 cities, commenced in the tenth century. The canal of Languedoc which joins the Mediterranean with the Atlantic Ocean

was commenced in 1666. That of Orleans, from the Loire to the Seine, commenced in 1675. That between the Caspian Sea and the Baltic, commenced 1709. That from Stockholm to Gottenburg, commenced 1751. That between the Baltic and North Sea at Kiel, opened 1785. That of Bourbon, between the Seine and Oise, commenced 1790. The first canal made in England was by Henry I., when the river Trent was joined to the Witham, A. D. 1184. That from the Durance to Marseilles, France, 83,000 metres, of which 17,000 are subterranean passages through the Alps, finished July 8, 1847. In England, there are 2800 miles of canals, and 2500 miles of rivers, taking the length of those only that are navigable—total, 5300 miles. In Ireland, there are but 300 miles of canals; 150 of navigable rivers, and 60 miles of the Shannon, navigable below Limerick, making in all 510 miles.—*Williams*.

**CANALS IN THE UNITED STATES.** Act for commencing the great Erie canal in New York, passed chiefly through the influence of De Witt Clinton, 1817. The canal (363 miles long) completed; a grand celebration, 1825. Chesapeake and Delaware canal opened, &c., July 4, 1829.

**CANARY ISLANDS.** These islands were known to the ancients as the *Fortunate Isles*. The first meridian was referred to the Canary isles by Hipparchus, about 140 B. C. They were re-discovered by a Norman, named Bethencourt, A. D. 1402; and were seized by the Spaniards, who planted vines, which flourish here, about 1420. The canary-bird, so much esteemed in all parts of Europe, is a native of these isles; it was brought into England in 1500.

**CANDIA**, the ancient Crete, whose centre is Mount Ida, so famous in history. It was seized by the Saracens, A. D. 808, when they changed its name. Taken by the Greeks, in 961; sold to the Venetians, 1194, and held by them till the Turks obtained it, after a 24 years' siege, during which more than 200,000 men perished, 1669.

**CANDLE.** The Roman candles were composed of strings surrounded by wax, or dipped in pitch. Splinters of wood, fattened, were used for light among the lower classes in England about A. D. 1300. At this time wax candles were little used, and esteemed a luxury, and dipped candles usually burnt. The wax-chandlers' company was incorporated, 1484. Mould candles are said to be the invention of the sieur Le Brez of Paris. Spermaceti candles are of modern manufacture. The Chinese candles (see *Candleberry Myrtle*) are made from the berries of a tree, and they universally burn this wax, which is fragrant, and yields a bright light.

**CANDLEMAS-DAY.** A feast instituted by the early Christians, who consecrated on this day all the tapers and candles used in churches during the year. It is kept in the reformed church in memory of the purification of the Virgin Mary, who, submitting to the law under which she lived, presented the infant Jesus in the Temple. Owing to the abundance of light, this festival was called Candlemas, as well as the Purification. The practice of lighting the churches was discontinued by English Protestants by an order of council 2 Edward VI. 1548; but it is still continued in the church of Rome.

**CANNÆ, BATTLE OF.** One of the most celebrated in history, and most fatal to the Romans. Hannibal commanded on one side 50,000 Africans, Gauls, and Spaniards; and Paulus Æmilius and Terentius Varro, 88,000 Romans, of whom 40,000 were slain.—*Livy*. The victor, Hannibal, sent three bushels of rings, taken from the Roman knights on the field, as a trophy to Carthage. Neither party perceived an awful earthquake which occurred during the battle. The place is now denominated the field of blood; fought May 21, 216 B. C.—*Bossuet*.

**CANNIBALISM** has prevailed from the remotest times. The Greeks inform us that it was a primitive and universal custom, and many of the South

American tribes and natives of the South Sea Islands eat human flesh at the present day, and the propensity for it prevails more or less in all savage nations. St. Jerome says, that some British tribes ate human flesh; and the Scots from Galloway killed and eat the English in the reign of Henry I. The Scythians were drinkers of human blood. Columbus found cannibals in America. See *Anthropophagi*.

**CANNON.** They are said to have been used as early as A. D. 1338. According to some of our historians they were used at the battle of Cressy in 1346; but this Voltaire disputes. They are said to have been used by the English at the siege of Calais, 1347. Cannon were first used in the English service by the governor of Calais, 6 Richard II. 1383.—*Rymer's Fœdera*. Louis XIV., upon setting out on his disastrous campaign against the Dutch, inscribed upon his cannon, "The last argument of kings." See *Artillery*.

**CANNON, REMARKABLE.** The largest known piece of ordnance is of brass, cast in India in 1685. At Ehrenbreitstein castle, one of the strongest forts in Germany, opposite Coblenz on the Rhine, is a prodigious cannon eighteen feet and a half long, a foot and a half in diameter in the bore, and three feet four inches in the breech. The ball made for it weighs 180lbs. and its charge of powder 94lbs. The inscription on it shows that it was made by one Simon, in 1529. In Dover castle is a brass gun called queen Elizabeth's pocket-pistol, which was presented to her by the States of Holland; this piece is 24 feet long, and is beautifully ornamented, having on it the arms of the States, and a motto in Dutch, importing thus,

"Charge me well, and sponge me clean,  
I'll throw a ball to Calais Green."

Some fine specimens are to be seen in the Tower. A leathern cannon was fired three times in the King's Park, Edinburgh, Oct. 23, 1788.—*Phillips*.

**CANON.** The first ecclesiastical canon was promulgated, A. D. 380.—*Usher*. Canonical hours for prayers were instituted in 391. The dignity of canon existed not previously to the rule of Charlemagne, about 768.—*Paschier*. Canon law was first introduced into Europe by Gratian, the celebrated canon law author, in 1151, and was introduced into England, 19 Stephen, 1154.—*Stowe*.

**CANONIZATION** of pious men and martyrs as saints, was instituted in the Romish church by pope Leo III. in 800.—*Tallent's Tables*. Saints have so accumulated, every day in the calendar is now a saint's day.—*Henault*.

**CANTERBURY.** The *Durovernum* of the Romans, and capital of Ethelbert, king of Kent, who reigned A. D. 560. Its early cathedral was erected during the Heptarchy, and was several times burnt, and rebuilt. It was once famous for the shrine of Becket (see *Becket*) and within it are interred Henry IV. and Edward the Black Prince.

**CANTERBURY, ARCHBISHOPRIC OF.** This see was settled by St. Austin, who preached the gospel in England A. D. 596, and converted Ethelbert, king of Kent. The king, animated with zeal for his new religion, bestowed great favors upon Austin, who fixed his residence in the capital of Ethelbert's dominions. The church was made a cathedral, and consecrated to Christ, although it was formerly called St. Thomas, from Thomas à Becket, murdered at its altar, December 1171. The archbishop is primate and metropolitan of all England, and is the first peer in the realm, having precedence of all officers of state, and of all dukes not of the blood royal. Canterbury had formerly jurisdiction over Ireland, and the archbishop was styled a patriarch. This see hath yielded to the church of Rome, 18 saints and 9 cardinals; and to the civil state of England, 12 lord chancellors and 4 lord treasurers. St. Austin was the first bishop, 596. The see was made superior to York, 1073.

—See *York*. The revenue is valued in the king's books at £2816. 17s. 9d.—*Bealson*.

**CANTHARIDES.** A venomous kind of insects which, when dried and pulverized, are used principally to raise blisters. They were first introduced into medical practice by Aretæus, a physician of Cappadocia, about 50 b. c.—*Freind's History of Physic*.

**CANTON.** The only city in China with which Europeans have been allowed up to the present time to trade. Merchants first arrived here for this purpose in 1517. Nearly every nation has a factory at Canton, but that of England surpasses all others in elegance and extent. Various particulars relating to this city will be found under the article *China*. In 1822, a fire destroyed 15,000 houses at Canton; and an inundation swept away 10,000 houses and more than 1000 persons in October 1833.

**CAOUTCHOUC**, or **INDIAN RUBBER**, is an elastic resinous substance that exudes by incision from two plants that grow in Cayenne, Quito, and the Brazils, called *Havia caoutchouc* and *Siphonia elastica*, and vulgarly called syringe trees. It was first brought to Europe from South America, about 1733.—See *India Rubber*.

**CAP.** The Romans went for many ages, without regular covering for the head, and hence the heads of all the ancient statues appear bare. But at one period the cap was a symbol of liberty, and when the Romans gave it to their slaves it entitled them to freedom. The cap was sometimes used as a mark of infamy, and in Italy the Jews were distinguished by a yellow cap, and in France those who had been bankrupts were for ever after obliged to wear a green cap. The general use of caps and hats is referred to the year 1449; the first seen in these parts of the world being at the entry of Charles VII. into Rouen, from which time they took the place of chaperons or hoods. A statute was passed that none should sell any hat above 20*d.* (40 cts.) nor cap above 2*s.* 8*d.* (66 cts.) 5 Henry VII. 1489.

**CAPE BRETON**, discovered by the English in 1584. It was taken by the French in 1632, but was afterwards restored; and again taken in 1745; and re-taken in 1748. It was finally possessed by the English, when the garrison and marines, consisting of 5600 men, were made prisoners of war, and eleven ships of the French navy were captured or destroyed, 1758. Ceded to England at the peace of 1763.

**CAPE COAST CASTLE**, settled by the Portuguese, in 1610: but it soon fell to the Dutch. It was demolished by admiral Holmes, in 1661. All the British settlements, factories, and shipping along the coast were destroyed by the Dutch admiral, de Ruyter, in 1665. This Cape was confirmed to the English by the treaty of Bréda, in 1667.

**CAPE OF GOOD HOPE**; the geographical and commercial centre of the East Indies: it was discovered by Bartholomew Diaz, in 1486, and was originally called the "Cape of Tempests," and was also named the "Lion of the Sea," and the "Head of Africa." The name was changed by John II., king of Portugal, who augured favorably of future discoveries from Diaz having reached the extremity of Africa. The Cape was doubled, and the passage to India discovered by Vasco da Gama, Nov. 20, 1497. Planted by the Dutch, 1651. Taken by the English, under admiral Elphinstone and general Clarke, Sept. 16, 1795, and restored at the peace in 1802; again taken by sir David Baird and sir Home Popham, Jan. 8, 1806; and finally ceded to England in 1814. Emigrants began to arrive here from Britain in March, 1820. The Caffres have made several irruptions on the British settlements here; and they committed dreadful ravages at Grahamstown, in Oct. 1834. Battle between the English and the Boors, Aug. 26, 1848.

**CAPE DE VERD ISLANDS.** These islands were known to the ancients under the name of Gorgades; but were not visited by the moderns till discovered by Antonio de Noli, a Genoese navigator in the service of Portugal, A. D. 1446.

**CAPE ST. VINCENT, BATTLES OF.** Admiral Rooke, with twenty ships of war, and the Turkey fleet under his convoy, was attacked by admiral Tourville, with a force vastly superior to his own, off Cape St. Vincent, when twelve English and Dutch men-of-war, and eighty merchantmen, were captured or destroyed by the French, June 16, 1693. Battle of Cape St. Vincent, one of the most glorious achievements of the British navy. Sir John Jervis, being in command of the Mediterranean fleet of fifteen sail, gave battle to the Spanish fleet of 27 ships of the line off this Cape, and signally defeated the enemy, nearly double in strength, taking four ships, and destroying several others, Feb. 14, 1797. For this victory Sir John was raised to the English peerage, by the titles of baron Jervis and earl St. Vincent, with a pension of 3000*l.* a year.

**CAPET, HOUSE OF,** the third race of the kings of France. Hugo Capet, count of Paris and Orleans, the first of this race (which was called from him Capetvians), was raised to the throne for his military valor, and public virtues, A. D. 987.—*Henault.*

**CAPITOL,** the principal fortress of ancient Rome, in which a temple was built to Jupiter, thence called *Jupiter Capitolinus*. The foundation laid by Tarquinius Priscus, 616 B. C. The Roman Consuls made large donations to this temple, and the emperor Augustus bestowed 2000 pounds weight of gold, of which precious metal the roof was composed, whilst its thresholds were of brass, and its interior was decorated with shields of solid silver. Destroyed by lightning, 188 B. C.; by fire, A. D. 70. The Capitoline games instituted by Domitian, A. D. 86.

**CAPPADOCIA.** This kingdom was founded by Pharnaces, 744 B. C. The successors of Pharnaces are almost wholly unknown, until about the time of Alexander the Great, after whose death Eumenes, by defeating Ariarathes II. became king of Cappadocia.

|                                                                         |   |           |                                                                                              |

|                                                                         |   |           | A. D. 17                                                                                     |

**CAPRI.** The Capræ of the Romans, and memorable as the residence of Tiberius, and for the debaucheries he committed in this once delightful retreat, during the seven last years of his life: it was embellished by him with a sumptuous palace, and most magnificent works. Capri was taken by sir Sidney Smith, April 22, 1806.

**CAPUCHIN FRIARS.** A sort of Franciscans to whom this name was given, from their wearing a great *Capuchon*, or cowl, which is an odd kind of cap, or hood, sewn to their habit, and hanging down upon their backs. The Capuchins were founded by Matthew Baschi, about A. D. 1525. Although the

rigors of this order have abated, still the brethren are remarkable for their extreme poverty and privations.—*Ashe*.

**CAR.** Its invention is ascribed to Erichonius of Athens, about 1486 B. C. The covered cars (*currus arcuati*) were in use among the Romans. Triumphant cars were introduced by Romulus, according to some; and by Tarquin the Elder, according to others.

**CARACCAS.** One of the early Spanish discoveries, A. D. 1498. The province declared its independence of Spain, May 9, 1810. In 1812, it was visited by a violent convulsion of nature; thousands of human beings were lost; rocks and mountains split, and rolled into valleys; the rivers were blackened or their courses changed; and many towns swallowed up, and totally destroyed.

**CARBONARI.** A dangerous and powerful society in Italy, a substitute for freemasonry, which committed the most dreadful outrages, and spread terror in several states; they were suppressed, however, by the Austrian government in Sept. 1820.

**CARDINALS.** They are properly the council of the pope, and constitute the conclave or sacred college. At first they were only the principal priests, or incumbents of the parishes in Rome. On this footing they continued till the eleventh century. They did not acquire the exclusive power of electing the popes till A. D. 1160. They first wore the red hat to remind them that they ought to shed their blood, if required, for religion, and were declared princes of the church by Innocent IV., 1243. Paul II. gave the scarlet habit, 1464; and Urban VIII. the title of Eminence in 1630; some say in 1623.—*Du Cange*.

**CARDS.** Their invention is referred to the Romans; but it is generally supposed that they were invented in France about the year 1390, to amuse Charles VI. during the intervals of a melancholy disorder, which in the end brought him to his grave.—*Mezérizai, Hist. de France*. The universal adoption of an amusement which was invented for a fool, is no very favorable specimen of wisdom.—*Malkin*. Cards are of Spanish, not of French origin.—*Daines Barrington*. Picquet and all the early games are French. Cards first taxed in England, 1756. 428,000 packs were stamped in 1775, and 986,000 in 1800. In 1825, the duty being then 2s. 6d. per pack, less than 150,000 packs were stamped; but in 1827, the stamp duty was reduced to 1s., and 310,854 packs paid duty in 1830. Duty was paid on 239,200 packs, in the year ending 5th Jan. 1840.—*Parl. Reports*.

**CARICATURES** originated, it is said, with Bufalmaco, an Italian painter: he first put labels to the mouths of his figures with sentences, since followed by bad masters, but more particularly in caricature engravings, about 1330.—*De Piles*. A new and much improved style of caricatures has latterly set in; and the productions in this way of a clever but concealed artist, using the initials H. B., are political satires of considerable humor and merit.—*Haydn*.

**CARLISLE.** The frontier town and key of England, wherein for many ages a strong garrison was kept. The castle, founded in 1092, by William II., was made the prison of the unfortunate Mary queen of Scots, in 1568. Taken by the parliament forces in 1645. and by the pretender in 1745.

**CARLSBAD, CONGRESS OF,** on the affairs of Europe: The popular spirit of emancipation that prevailed in many of the states of Europe against despotic government, led to this congress, in which various resolutions were come to, denouncing the press, and liberal opinions, and in which the great continental powers decreed measures to repress the rage for limited monarchies and free institutions, August 1, 1819.

**CARMELITES, OR WHITE FRIARS,** named from Mount Carmel, and one of the four orders of mendicants, distinguished by austere rules, appeared in 1141. Their rigor was moderated about 1540. They claim their descent in an un-

interrupted succession from Elijah, Elisha, &c. Mount Carmel has a monastery, and the valley of Sharon lies to the south of the mount, which is 2000 feet high, shaped like a flatted cone, with steep and barren sides: it is often referred to in Jewish histories.

"See spicy clouds from lowly Sharon rise,  
And Carmel's flowery top perfumes the skies."—*Pope*.

CAROLINA, discovered by Sebastian Cabot, in 1550. A body of English, amounting to about 850 persons, landed and settled here in 1667; and Carolina was granted to lord Berkeley and others a few years afterwards. See *N. & S. Carolina*.

CARPETS. They were in use, at least in some kind, as early as the days of Amos, about 800 B. C.—*Amos* ii. 8. Carpets were spread on the ground, on which persons sat who dwelt in tents; but when first used in houses, even in the East, we have no record. In the 12th century carpets were articles of luxury; and in England, it is mentioned as an instance of Becket's splendid style of living, that his sumptuous apartments were every day in winter strewn with clean straw or hay; about A. D. 1160. The manufacture of woollen carpets was introduced into France from Persia, in the reign of Henry IV., between 1589 and 1610. Some artisans who had quitted France in disgust went to England, and established the carpet manufacture, about 1750. There, as with most nations, Persian and Turkey carpets, especially the former, are most prized. The famous Axminster, Wilton, and Kidderminster manufacture is the growth of the last hundred years. The manufacture of Kidderminster and Brussels carpets has much advanced within fifteen years, at Lowell, Mass. and Thomsonville Conn.

CARRIAGES. The invention of them is ascribed to Erichonius of Athens, who produced the first chariot about 1486 B. C. Carriages were known in France, in the reign of Henry II. A. D. 1547; but they were of very rude construction, and rare. They seem to have been known in England in 1555; but not the art of making them. Close carriages of good workmanship began to be used by persons of the highest quality at the close of the sixteenth century. Henry IV. had one, but without straps or springs. Their construction was various: they were first made in England in the reign of Elizabeth, and were then called whirlicotes. The duke of Buckingham, in 1619, drove six horses; and the duke of Northumberland, in rivalry, drove eight. They were first let for hire in Paris, in 1650, at the Hotel Fiacre; and hence their name. See *Coaches*.

CARTESIAN DOCTRINES. Their author was René des Cartes, the French philosopher, who promulgated them in 1647. He was an original thinker: his metaphysical principle "I think, therefore I am," is refuted by Mr. Locke; and his physical principle, that "nothing exists but substance," is disproved by the Newtonian philosophy. His celebrated system abounds in great singularities and originalities; but a spirit of independent thought prevails throughout it, and has contributed to excite the same spirit in others. Des Cartes was the most distinguished philosopher of his time and country.—*Dufresnoy*.

CARTHAGE, founded by Dido, or Elissa, sister of Pygmalion, king of Tyre, 869 B. C. She fled from that tyrant, who had killed her husband, and took refuge in Africa. Carthage became so powerful as to dispute the empire of the world with Rome, which occasioned the Punic wars, and the total demolition of that city. Taken by Scipio, and burned to the ground, 146 B. C. when the flames raged during seventeen days, and many of the inhabitants perished in them, rather than survive the subjection of their country. The Roman senate ordered the walls to be razed, that no trace might remain of this once powerful republic.—*Eusebius*.

CARTHAGE, *continued.*

**CARTHAGENA**, or **NEW CARTHAGE**, in Spain; built by Asdrubal, the Carthaginian general, 227 B. C. From here Hannibal set out in his memorable march to invade Italy, crossing the Alps, 217 B. C. Carthagena, in Colombia, was taken by sir Francis Drake in 1584. It was pillaged by the French of £1,200,000 in 1697; and was bombarded by admiral Vernon in 1740-1, but he was obliged, though he took the forts, to raise the siege.

**CARTHUSIANS**. A religious order founded by Bruno of Cologne, who retired from the converse of the world, in 1084, to Chartreuse, in the mountains of Dauphiné. Their rules were formed by Basil VII., general of the order, and were peculiarly distinguished for their austerity. The monks could not leave their cells, nor speak, without express leave; and their clothing was two hair cloths, two cowls, two pair of hose, and a cloak, all coarse. The general takes the title of prior of the Chartreuse, the principal monastery, from which the order is named.—*Auberti; Mirai Origines Carthus.*

**CARTOONS** or **RAPHAEL**. They were designed in the chambers of the Vatican, under Julius II. and Leo X., about 1510 to 1515. The seven of them that are preserved were purchased in Flanders by Rubens for Charles I. of England, for Hampton-court palace, in 1629. These matchless works represent—1, The miraculous draught of Fishes; 2, the Charge to Peter; 3, Peter and John healing the Lame at the gate of the Temple; 4, the Death of Ananias; 5, Elymas, the Sorcerer, struck with Blindness; 6, the Sacrifice to Paul and Barnabas, by the people of Lystra; 7, Paul preaching at Athens.

**CARVING**. We have scriptural authority for its early introduction. See *Exodus xxxi*. The art of carving is first mentioned in profane history 772 B. C. and is referred to the Egyptians. It was first in wood, next in stone, and afterwards in marble and brass. Dipoenus and Scyllis were eminent carvers and sculptors, and opened a school of statuary, 568 B. C.—*Pliny*. See article *Sculptures*. Carvers of meat, called by the Greeks *deribitares*, are mentioned by Homer.

**CASHMERE SHAWLS**. The district from whence come these costly shawls is described as being "the happy valley, and a paradise in perpetual spring." The true Cashmere shawls can be manufactured of no other wool than that Thibet. They were first brought to England in 1666; but they were well imitated by the spinning at Bradford, and the looms of Huddersfield.

Shawls for the omrahs, of the Thibetian wool, cost 150 rupees each, about the year 1650.—*Bernier*.

**CASTEL NUOVO, BATTLE OF.** The Russians defeated by the French army, Sept. 29, 1806. Castel Nuovo has several times suffered under the dreadful visitation of earthquakes: in the great earthquake which convulsed all Naples and Sicily, in 1783, this town was almost obliterated. It is recorded that an inhabitant of Castel Nuovo, being on a hill at no great distance, looking back, saw no remains of the town, but only a black smoke; 4000 persons perished; and in Sicily and Naples, more than 40,000.

**CASTIGLIONE, BATTLE OF.** One of the most brilliant victories of the French arms, under general Bonaparte, against the main army of the Austrians, commanded by general Wurmser: the battle lasted five days successively, from the 2d to the 6th July, 1796. Bonaparte stated the enemy's loss in this obstinate conflict at 70 field-pieces, all his caissons, between 12 and 15,000 prisoners, and 6000 killed and wounded.

**CASTILE.** The most powerful government of the Goths was established here about A. D. 800. Ferdinand, count of Castile, assumed the title of king in 1020. Ferdinand of Arragon married Isabella of Castile, and nearly the whole of the Christian dominions in Spain were united in one monarchy, 1474. See *Arragon* and *Spain*.

**CASTLES.** Anciently British castles were tall houses, strongly fortified, and built on the tops of hills, with gates and walls. The castle of the Anglo-Saxon was a tower-keep, either round or square, and ascended by a flight of steps in front. There were eleven hundred castles built in England by the nobles, by permission of king Stephen, A. D. 1135, and 1154: most of these were demolished by Henry II., who deprived the barons of such possessions on his accession, in 1154.

**CATACOMBS;** the early depositories of the dead. The name first denoted the tombs of Saints Peter and Paul at Rome, and afterwards the burial-places of all martyrs. They were numerous in Egypt; and Belzoni, in 1815 and 1818, explored many catacombs both in that country and Thebes, built 3000 years ago: among others, a *chef-d'œuvre* of ancient sculpture, the temple of Psammeticus the Powerful, whose sarcophagus, formed of the finest oriental alabaster, exquisitely sculptured, he brought to England. Many other nations had their catacombs; there were some of great extent at Rome. The Parisian catacombs were projected A. D. 1777. The bodies found in catacombs, especially those of Egypt, are called mummies. See *Embalming*.

**CATANIA, or CATANEA.** At the foot of mount Etna. Founded by a colony from Chalcis, 753 B. C. Ceres had a temple here, in which none but women were permitted to appear. This ancient city is remarkable for the dreadful overthrows to which it has been subjected at various times from its vicinity to Etna, which has discharged, in some of its eruptions, a stream of lava four miles broad and fifty feet deep, advancing at the rate of seven miles in a day. Catania was almost totally overthrown by an eruption of Etna, in 1669. By an earthquake which happened in 1693, Catania was nearly swallowed up, and in a moment more than 18,000 of its inhabitants were buried in the ruins of the city. An earthquake did great damage, and a number of persons perished here, Feb. 22, 1817.

**CATAPHRYGIANS.** A sect of heretics, so called because they were Phrygians, who followed the errors of Montanus. They made up the bread of the eucharist with the blood of infants, whom they pricked to death with needles, and then looked upon them as martyrs.—*Pardon*.

**CATAPULTÆ.** Ancient military engines for throwing stones of immense weight, darts, and arrows; invented by Dionysius, 399 B. C.—*Josephus*. The

were capable of throwing darts and javelins of four and five yards length.—*Pardon.*

**CATHOLIC MAJESTY.** The title of Catholic was first given by pope Gregory III. to Alphonsus I. of Spain, who was thereupon surnamed *the Catholic*; A. D. 739. The title of *Catholic* was also given to Ferdinand V., 1474. See *Spain*.

**CATILINE'S CONSPIRACY.** Sergius L. Catiline, a Roman of noble family, having squandered away his fortune by his debaucheries and extravagance, and having been refused the consulship, he secretly meditated the ruin of his country, and conspired with many of the most illustrious of the Romans, as dissolute as himself, to extirpate the senate, plunder the treasury, and set Rome on fire. This conspiracy was timely discovered by the consul Cicero, whom he had resolved to murder; and on seeing five of his accomplices arrested, he retired to Gaul, where his partisans were assembling an army. Cicero punished the condemned conspirators at home, while Petreius attacked Catiline's ill-disciplined forces, and routed them, and the conspirator was killed in the engagement, about the middle of December, 63 B. C. His character has been branded with the foulest infamy, and to the violence he offered to a vestal, he added the murder of his own brother; and it is said that he and his associates drank human blood to render their oaths more firm and inviolable.—*Salust.*

**CATO, SUICIDE OF.** Termed as the "era destructive of the liberties of Rome." Cato, the Roman patriot and philosopher, considered freedom as that which alone "sustains the name and dignity of man;" unable to survive the independence of his country, he stabbed himself at Utica. By this rash act of suicide, independently of all moral considerations, Cato carried his patriotism to the highest degree of political frenzy; for Cato, dead, could be of no use to his country; but had he preserved his life, his counsels might have moderated Cæsar's ambition, and have given a different turn to public affairs. Feb. 5, 45 B. C. —*Montesquieu.*

**CATO-STREET CONSPIRACY.** The mysterious plot of a gang of low and desperate politicians, whose object was the assassination of the ministers of the crown, with a view to other sanguinary and indiscriminate outrages, and the overthrow of the government: the conspirators were arrested Feb. 23, 1820; and Thistlewood and his four principal associates, Brunt, Davison, Ings, and Tidd, after a trial commenced on April 17th, which ended in their conviction, were executed according to the then horrid manner of traitors, on May 1, following.—*Haydn.*

**CAUCASUS.** A mountain of immense height, a continuation of the ridge of Mount Taurus, between the Euxine and Caspian seas, inhabited anciently by various savage nations who lived upon the wild fruits of the earth. It was covered with snow in some parts, and in others was variegated with fruitful orchards and plantations: its people were at one time supposed to gather gold on the shores of their rivulets, but they afterwards lived without making use of money. Prometheus was tied on the top of Caucasus by Jupiter, and continually devoured by vultures, according to ancient authors, 1548 B. C. The passes near the mountain were called *Caucasie Portæ*, and it is supposed that through them the Sarmatians, called Huns, made their way, when they invaded the provinces of Rome, A. D. 447.—*Strabo. Herodotus.*

**CAUSTIC IN PAINTING.** The branch of the art so called is a method of burning the colors into wood or ivory. Gausias, a painter of Sicily, was the inventor of this process. He made a beautiful painting of his mistress Glycere, whom he represented as sitting on the ground, and making garlands of flowers; and from this circumstance the picture, which was

bought afterwards by Lucullus for two talents, received the name of *Stephanoplocen*, 335 B. C.—*Plinii Hist. Nat.*

**CAVALIERS.** This appellation was given as a party name in England to those who espoused the cause of the king during the unhappy war which brought Charles I. to the scaffold. They were so called in opposition to the Roundheads, or friends of the parliament, between 1642 and 1649.—*Hume*.

**CAVALRY.** Of the ancient nations the Romans were the most celebrated for their cavalry, and for its discipline and efficiency. Attached to each of the Roman legions was a body of horse 300 strong, in ten *turmæ*; the commander was always a veteran, and chosen for his experience and valor. In the early ages, the Persians brought the greatest force of cavalry into the field: they had 10,000 horse at the battle of Marathon, 490 B. C.: and 10,000 Persian horse were slain at the battle of Issus, 333 B. C.—*Plutarch*.

**CAYENNE.** First settled by the French in 1625, but they left it in 1654. It was afterwards successively in the hands of the English, French, and Dutch. These last were expelled by the French in 1677. Cayenne was taken by the British, Jan. 12, 1809, but was restored to the French at the peace in 1814. In this settlement is produced the *capsicum baccatum*, or cayenne pepper, so esteemed in Europe.

**CELESTIAL GLOBE.** A celestial sphere was brought to Greece from Egypt, 368 B. C. A planetarium was constructed by Archimedes before 212 B. C. The celestial globe was divided into constellations after the age of Perseus. The great celestial globe of Gottorp, planned after a design of Tycho Brache, and erected at the expense of the duke of Holstein, was eleven feet in diameter: and that at Pembroke-hall, Cambridge, erected by Dr. Long, is eighteen feet. See *Globes*.

**CELESTINS.** A religious order of monks, reformed from the Bernardins by pope Celestine V. in 1294. The order of nuns was instituted about the same period.

**CELIBACY,** and the monastic life, preached by St. Anthony in Egypt, about A. D. 305. The early converts to this doctrine lived in caves and desolate places till regular monasteries were founded. The doctrine was rejected at the council of Nice, A. D. 325. Celibacy was enjoined on bishops only in 692. The Romish clergy generally were compelled to a vow of celibacy in 1073. Its observance was finally established by the council of Placentia, held in 1095. Among the illustrious philosophers of antiquity, the following were unfriendly to matrimony:—Plato, Pythagoras, Epicurus, Bion, Anaxagoras, Heraclitus, Democritus, and Diogenes; and the following among the moderns:—Newton, Locke, Boyle, Gibbon, Hume, Adam Smith, Harvey, Leibnitz, Bayle, Hobbes, Hampden, sir F. Drake, earl of Essex, Pitt, Michael Angelo, the three Caraccis, sir Joshua Reynolds, Haydn, Handel, Wolsey, Pascal, Fenelon, Pope, Akenside, Goldsmith, Gray, Collins, Thompson, and Jeremy Bentham.

**CEMETERIES.** The ancients had not the unwise custom of crowding all their dead in the midst of their towns and cities, within the narrow precincts of a place reputed sacred, much less of amassing them in the bosom of their fanes and temples. The burying places of the Greeks and Romans were at a distance from their towns; and the Jews had their sepulchres in gardens—*John* xix. 41; and in fields, and among rocks and mountains—*Matthew* xxvii, 60. The present practice was introduced by the Romish clergy, who pretended that the dead enjoyed peculiar privileges by being interred in consecrated ground. The burying-places of the Turks are handsome and agreeable, and it is owing chiefly to the many fine plants that grow in them, and which they carefully place over their dead. It is only

within a very few years that public cemeteries have been formed in these countries, although the crowded state of our many churchyards, and the danger to health of burial-places in the midst of dense populations, called for some similar institutions to that of the celebrated *Père la Chaise* at Paris. Six public cemeteries have been recently opened in London suburbs. The inclosed area of each of these cemeteries is planted and laid out in walks after the manner of *Père la Chaise*.\* There are similar cemeteries in Manchester, Liverpool, and other towns; and in Ireland, at Cork, Dublin, &c. Some of the rural cemeteries of the United States, especially that at Mount Auburn, near Boston (opened 1831), Laurel Hill, Philadelphia (183-), and Greenwood, near New-York (1839), are far more beautiful in their natural features than any of those near London or Paris.

**CENSORS.** Roman magistrates, whose duty it was to survey and rate, and correct the manners of the people; their power was also extended over private families, and they restrained extravagance. The two first censors were appointed 443 B. C. The office was abolished by the emperors.

**CENSUS.** In the Roman polity, a general estimate of every man's estate and personal effects, delivered to the government upon oath every five years: established by Servius Tullius, 566 B. C.—*Legal Polity of the Roman State*. In England the census, formerly not periodical, is now taken at decennial periods, of which the last were the years 1811, 1821, and 1831; and the new census, 1841.

**CENSUS OF THE UNITED STATES,** has been taken at six different periods, viz. 1790, 1800, 1810, 1820, 1830, and 1840. The seventh census is taken this year, 1850.—See *Population*.

**CENTURION.** The captain, head, or commander of a subdivision of a Roman legion, which consisted of 100 men, and was called a *centuria*. He was distinguished by a branch of vine which he carried in his hand. By the Roman census, each hundred of the people was called a *centuria*, 566 B. C.

**CENTURY.** The method of computing by centuries was first generally observed in ecclesiastical history, and commenced from the time of our Redeemer's incarnation, A. D. 1. It is a period that is particularly regarded by church historians.—*Pardon*.

**CERES.** This planet, which is only 160 miles in diameter, was discovered by M. Piazzì, astronomer royal at Palermo, on the 1st. of Jan. 1801. To the naked eye it is not visible, nor will glasses of a very high magnifying power show it with a distinctly defined diameter. *Pallas*, discovered by Dr. Olbers, is still smaller.

**CEYLON.** The natives claim for this island the seat of paradise; it was discovered by the Portuguese A. D. 1505; but it was known to the Romans in the time of Claudius, A. D. 41. The capital, Colombo, was taken by the Hollanders in 1603; and was recovered by the Portuguese in 1621. The Dutch again took it in 1656. A large portion of the country was taken by the British in 1782, but was restored the next year. The Dutch settlements

---

\* *Père la Chaise* takes its name from a French Jesuit, who was a favorite of Louis XIV., and his confessor. He died in 1709; and the site of his house and grounds at Paris is now occupied by this beautiful cemetery. It was a practice of high antiquity to plant herbs and flowers about the graves of the dead. The women in Egypt go weekly to pray and weep at the sepulchres, and it is then usual to throw a sort of herb (our sweet-basil) upon the tombs; which in Asia Minor, and Turkey in Europe, are also adorned either with the leaves of the palm-tree, boughs of myrtle, or cypresses planted at the head and feet. Between some of the tombs is placed a chest of ornamented stone, filled with earth, in which are planted herbs and aromatic flowers. These are regularly cultivated by females, who assemble in groups for that duty. At Aleppo, there grow many myrtles, which they diligently propagate, because they are beautiful, and remain long green, to put about their graves.—*Maillet; Chandler; Butler*.

were seized by the British; Trincomalee Aug. 26, 1795, and Jaffnapatam, in Sept. same year. Ceylon was ceded to Great Britain by the peace of Amiens in 1802. The British troops were treacherously massacred, or imprisoned by the Adigar of Candy, at Colombo, June 26, 1803. The complete sovereignty of the island was assumed by England in 1815.

**CHÆRONEA, BATTLES OF.** The Athenians are defeated by the Bœotians, and Tolmidas, their general, is slain, 447 B. C. Battle of Chæronea, in which Greece lost its liberty to Philip, 32,000 Macedonians defeating the confederate army of Thebans and Athenians of 30,000, Aug. 2, 338 B. C. Battle of Chæronea in which Archelaus, lieutenant of Mithridates, is defeated by Sylla, and 110,000 Cappadocians are slain, 86 B. C.

**CHAIN-BRIDGES.** The largest and oldest chain-bridge in the world is said to be that at Kingtung, in China, where it forms a perfect road from the top of one mountain to the top of another. The honor of constructing the first chain-bridge on a grand scale belongs to Mr. Telford, who commenced the chain-suspension bridge over the strait between Anglesey and the coast of Wales, July 1818.—See *Menai Bridge*.

**CHAIN-CABLES, PUMPS, AND SHOT.** Iron chain-cables were in use by the Veneti, a people intimately connected with the Belgæ of Britain in the time of Cæsar, 55 B. C. These cables came into modern use, and generally in the royal navy of England, in 1812. Chain-shot, to destroy the rigging of an enemy's ships, was invented by the Dutch admiral De Witt, in 1666. Chain-pumps were first used on board the *Flora*, British frigate, in 1787.

**CHAISE or CALASH.** The invention of the chaise, which is described as a light and open vehicle, is ascribed to Augustus Cæsar, about A. D. 7. Aurelius Victor mentions that the use of post-chaises was introduced by Trajan, about A. D. 100. The chariot was in use fifteen centuries before. See *Chariot*.

**CHALDEAN REGISTERS.** Registers of celestial observations were commenced 2234 B. C., and were brought down to the taking of Babylon by Alexander, 331 B. C., being a period of 1903 years. These registers were sent by Callisthenes to Aristotle. **CHALDEAN CHARACTERS:** the Bible was transcribed from the original Hebrew into these characters, now called Hebrew, by Ezra.

**CHAMP DE MARS:** an open square space in front of the Military School at Paris, with artificial embankments raised on each side, extending nearly to the river Seine, with an area sufficient to contain a million of people. Here was held, on the 14th July, 1790, the famous "fédération," or solemnity of swearing fidelity to the "patriot king" and new constitution. In the evening great rejoicings followed the proceedings; public balls were given by the municipality in the *Champs Elysées* and elsewhere, and Paris was illuminated throughout. 1791, July 17, a great meeting of citizens and others held here, directed by the Jacobin clubs, to sign petitions on the "altar of the country"—left standing for some time afterwards—praying for the enforced abdication of Louis XVI. Another new constitution sworn to here, under the eye of Bonaparte, May 1, 1815, a ceremony called the *Champ de Mars*.

**CHAMPION OF ENGLAND.** The championship was instituted at the coronation of Richard II. 1377. At the coronations of English kings the champion still rides completely armed into Westminster-hall, and challenges any one that would deny their title to the crown. The championship is hereditary in the Dymocke family.

**CHANCELLORS, LORD HIGH, OF ENGLAND.** The Lord Chancellor ranks after the princes of the Blood Royal as the first lay subject. Formerly, the office was conferred upon some dignified clergyman. Maurice, afterwards bishop of London, was created chancellor in 1067. The first personage who

was qualified by great legal education, and who decided causes upon his own judgment, was Sir Thomas More, in 1530, before which time the office was more that of a high state functionary than the president of a court of justice. Sir Christopher Hatton, who was appointed chancellor in 1587, was very ignorant, on which account the first reference was made to a master in 1588. In England, the great seal has been frequently put in commission; but it was not until 1813 that the separate and co-existent office of *Vice-Chancellor* was permanently held.

LORD CHANCELLORS OF ENGLAND,  
(From the time of Cardinal Wolsey.)

|                                                                                  |                                                                          |
|----------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| 1515 Cardinal Wolsey.                                                            | 1692 Sir John Somers, afterwards lord Somers.                            |
| 1530 Sir Thomas More ( <i>beheaded</i> ).                                        | 1702 Sir Nathan Wright, <i>L. K.</i>                                     |
| 1533 Sir Thomas Audley.                                                          | 1705 Lord Cowper, <i>L. K.</i>                                           |
| 1534 Thomas, bishop of Ely.                                                      | 1710 In commission.                                                      |
| 1545 Lord Wriothesley.                                                           | 1713 Lord Harcourt.                                                      |
| 1547 Lord St. John.                                                              | 1714 Lord Cowper again.                                                  |
| 1547 Lord Rich.                                                                  | 1718 In commission.                                                      |
| 1551 Bishop of Ely again.                                                        | 1718 Viscount Parker, afterwards earl of Macclesfield.                   |
| 1551 Sir Nich. Hare, <i>Lord Keeper</i> .                                        | 1725 Sir Peter King, <i>L. K.</i> afterwards lord King.                  |
| 1653 Bishop of Winchester.                                                       | 1733 Lord Talbot.                                                        |
| 1555 Archbishop of York.                                                         | 1737 Philip, lord Hardwicke.                                             |
| 1559 Sir Nicholas Bacon.                                                         | 1761 Sir Robert Henley, afterwards lord Henley, and earl of Northington. |
| 1579 Sir Thomas Bromley.                                                         | 1766 Charles Pratt, lord Camden.                                         |
| 1587 Sir Christopher Hatton.                                                     | 1770 Hon. Chas. Yorke, Jan. 18; <i>died next day</i> .                   |
| 1592 Sir John Packering.                                                         | 1770 In commission.                                                      |
| 1596 Sir Thomas Egerton.                                                         | 1771 Henry Bathurst, lord Apsley, succeeded as earl Bathurst.            |
| 1616 Sir Francis Bacon, afterwards lord Verulam.                                 | 1778 Lord Thurlow.                                                       |
| 1625 Sir Thomas Coventry.                                                        | 1783 Lord Loughborough and others (in commission) - April 9              |
| 1639 Sir John Finch.                                                             | 1783 Lord Thurlow again - Dec. 23                                        |
| 1640 Sir Edward Littleton, afterwards lord Littleton.                            | 1792 In commission.                                                      |
| 1645 Sir Richard Lane.                                                           | 1793 Lord Loughborough again.                                            |
| 1648 In commission.                                                              | 1801 Lord Eldon. - April 14                                              |
| 1653 Sir Edward Herbert.                                                         | 1806 Lord Erskine. - Feb. 7                                              |
| 1658 Sir Edward Hyde, afterwards earl of Clarendon.                              | 1807 Lord Eldon again. - March 25                                        |
| 1667 Sir Orlando Bridgeman, <i>L. K.</i>                                         | 1827 Lord Lyndhurst. - April 20                                          |
| 1672 Earl of Shaftesbury.                                                        | 1830 Lord Brougham. - Nov. 22                                            |
| 1673 Sir Heneage Finch, afterwards earl of Nottingham.                           | 1834 Lord Lyndhurst again - Nov. 14                                      |
| 1682 Lord Guilford, <i>L. K.</i>                                                 | 1835 In commission.                                                      |
| 1685 Sir George Jeffreys, lord Jeffreys.                                         | 1836 Lord Cottenham. - Jan. 16                                           |
| 1690 In commission.                                                              | 1841 Lord Lyndhurst again. - Aug. 31                                     |
| 1690 Sir John Trevor, Sir William Rawlinson, and Sir Geo. Hutchins, <i>L. K.</i> | 1846 Lord Cottenham again - July 6                                       |

CHANCELLOR OF IRELAND. LORD HIGH. The earliest nomination was by Richard I. A. D. 1186, when Stephen Ridel was elevated to this rank. The office of vice-chancellor was known in Ireland, but not as a distinct appointment, in the reign of Henry III., Geoffrey Turville, archdeacon of Dublin, being so named, 1232.

CHANCELLOR OF SCOTLAND. In the laws of Malcolm II. who reigned A. D. 1004, this officer is thus mentioned: "The Chancellor sal at al tymes assist the king in giving him counsall mair secretly nor of the rest of the nobility. The Chancellor sall be ludgit near unto the kingis Grace, for keiping of his bodie, and the seill, and that he may be readie, baith day and nicht, at the kingis command."—*Sir James Balfour*. James, earl of Seafeld, afterwards Findlater, was the last lord high Chancellor of Scotland, the office having been abolished in 1708.—*Scott*.

CHANCERY, COURT OF. Instituted as early as A. D. 605. Settled upon a better footing by William I., in 1067.—*Stowe*. This court had its origin in the desire to render justice complete, and to moderate the rigor of other courts that are bound to the strict letter of the law. It gives relief to or against infants, notwithstanding their minority; and to or against married

women, notwithstanding their coverture; and all frauds, deceits, breaches of trust and confidence, for which there is no redress at common law, are relievable here.—*Blackstone*.

| EFFECTS OF SUITORS LODGED IN COURT AT THE FOLLOWING DECENNIAL PERIODS. |                 |            |                                    |
|------------------------------------------------------------------------|-----------------|------------|------------------------------------|
| 1770                                                                   | - Amount lodged | £5,300,000 | 1810 - Amount lodged - £26,212,000 |
| 1780                                                                   | - ditto         | 7,741,000  | 1820 - ditto - 34,208,785          |
| 1790                                                                   | - ditto         | 13,333,000 | 1830 - ditto - 38,886,135          |
| 1800                                                                   | - ditto         | 19,834,000 | 1840 - ditto - 39,772,746          |

There are about 10,000 accounts. By the last official returns the number of committals for contempt was ninety-six persons in three years.—*Parl. Returns*.

**CHANTRY.** A chapel endowed with revenue for priests to sing mass for † souls of the donors.—*Shakspeare*. First mentioned in the commencement of the seventh century, when Gregory the great established schools of chanters.—See *Chanting*.

**CHAOS.** A rude and shapeless mass of matter, and confused assemblage of inactive elements which, as the poets suppose, pre-existed the formation of the world, and from which the universe was formed by the hand and power of a superior being. This doctrine was first advanced by Hesiod, from whom the succeeding poets have copied it; and it is probable that it was obscurely drawn from the account of Moses, by being copied from the annals of Sanchoniathon, whose age is fixed antecedent to the siege of Troy in 1193 B. C. See *Geology*.

**CHARIOTS.** The invention of chariots, and the manner of harnessing horses to draw them, is ascribed to Erichthonius of Athens, 1486 B. C. Chariot racing was one of the exercises of Greece. The chariot of the Ethiopian officer, mentioned in *Acts* viii. 27, 28, 31, was, it is supposed, something in the form of our modern chaise with four wheels. Cæsar relates that Cassibelanus, after dismissing all his other forces, retained no fewer than 4000 war chariots about his person. The chariots of the ancients were like our phætons, and drawn by one horse. See *Carriages, Coaches, &c.*

**CHARITIES** in the United States.—See *Benevolence*. In England there are tens of thousands of charitable foundations; and the charity commission reported to parliament that the endowed charities alone of Great Britain amounted to £1 500,000 annually, in 1840.—*Parl. Rep.* Charity schools were instituted in London to prevent the seduction of the infant poor into Roman Catholic seminaries, 3 James II. 1687.—*Rapin*.

**CHARLESTON, S. C.**, was first settled in 1680. In 1690 a colony of French refugees, exiled in consequence of the revocation of the Edict of Nantes settled in Carolina, and some of them in Charleston: from them are descended many of the most respectable of the inhabitants. At the close of 1779, the city was taken by the British, and held by them until May following. Population in 1790, 16,359; in 1810, 24,711; in 1820, 24,780; in 1830, 30,289; in 1840, 29,261—(a decrease of 1,028 in ten years) including 14,673 slaves.

**CHARTERS OF RIGHTS.** The first charters of rights granted by the kings of England to their subjects, were by Edward the Confessor, and by Henry I. A. D. 1100. The famous bulwark of English liberty, known as *Magna Charta* or the great charter, was granted to the barons by king John, June 15, 1215. The rights and privileges granted by this charter were renewed and ratified by Henry III. in 1224, *et seq.* Sir Edward Coke says that even in his days it had been confirmed above thirty times. Charters to corporations were of frequent grant from the reign of William I. See *Magna Charta*.

**CHARTERS.** to the American colonies. That to Virginia granted by James I. 1606; to Massachusetts, by the same, 1620, but withdrawn by Charles II.

1684; that granted to Connecticut by Charles II., 1665, was concealed in an oak to preserve it from the tyrannical Andros. General suppression of charter governments in America, 1688.

**CHARTER PARTY.** The same species of deed or agreement as the ancient chirograph. A covenant between merchants and masters of ships relating to the ship and cargo. It was first used in England in the reign of Henry III., about 1243.

**CHARTISTS.** The agitators for radical political reforms in England were so called from the *Charter* which they drew up and urged for adoption as the law of the land, 1838. The petition for it, signed by about 5,000,000 names. Proclamation against tumultuous assemblies of the Chartists, Dec. 12, 1838. Chartist attack on Newport, Wales, headed by John Frost, an ex-magistrate, defeated, Nov. 4, 1839. Frost and others taken prisoner, tried, and transported. Another Chartist demonstration on Kennington Common, near London, exciting great alarm (chiefly because of the recent revolution in Paris), April 10, 1848. The six chief demands of the Chartists are: 1. Universal suffrage. 2. Vote by ballot. 3. No property qualification. 4. Annual parliaments. 5. Payment of members. 6. Equal electoral districts.

**CHARTS.** Anaximander of Miletus was the inventor of geographical and celestial charts, about 570 B. C. Modern sea-charts were brought to England by Bartholomew Columbus, with a view to illustrate his brother's theory respecting a western continent, 1489. Mercator's chart, in which the world is taken as a plane, was drawn, 1556.

**CHARYBDIS**, a dangerous whirlpool on the coast of Sicily, opposite another whirlpool called Scylla, on the coast of Italy. It was very dangerous to sailors, and it proved fatal to part of the fleet of Ulysses. The exact situation of the Charybdis is not discovered by the moderns, as no whirlpool sufficiently tremendous is now found to correspond to the description of the ancients. The words *Incidit in Scyllam qui vult vitare Charybdim*, became a proverb, to show that in our eagerness to avoid an evil, we fall into a greater.

**CHANTING.** Chanting the psalms was adopted by Ambrose from the pagan ceremonies of the Romans, about A. D. 350.—*Lenglet*. Chanting in churches was introduced into the Roman Catholic service in 602, by Gregory the Great, who established schools of chanters, and corrected the church song.—*Dufresnoy*.

**CHEATS.** The convicted cheat punishable by pillory (since abolished), imprisonment, and fine, 1 *Hawk*. L. C. 188. A rigorous statute was enacted against cheats, 33 Henry VIII. 1542. Persons cheating at play, or winning at any time more than 10*l.*, or any valuable thing, were deemed infamous, and were to suffer punishment as in cases of perjury, 9 Anne, 1711.—*Blackstone's Comm.*

**CHEESE.** It is supposed by Camden and others that the English learned the process of making cheese from the Romans (who brought many useful arts with them) about the Christian era. Cheese is made by almost all nations. Wilts, Gloucester, and Cheshire, make vast quantities; the last alone, annually, about 31,000 tons. The Cheddar of Somerset, and Stilton of Huntingdon, are as much esteemed as the cheese of Parma, and Gruyère of Switzerland. In 1840 England imported, chiefly from the U. States, for home use, a quantity exceeding 10,000 tons.

**CHEMISTRY AND DISTILLING.** Introduced into Europe by the Spanish Moors, about A. D. 1150; they had learned them from the African Moors, and these from the Egyptians. In Egypt, they had, in very early ages, extracted salts from their bases, separated oils, and prepared vinegar and wine;

and embalming was a kind of chemical process. The Chinese also claim an early acquaintance with chemistry; but the fathers of true chemical philosophy were of our own country; Bacon, Boyle, Hooke, Mayow, Newton, &c. The modern character of chemistry was formed under Beecher and Stahl, who perceived the connection of the atmosphere and the gases, with the production of phenomena. Bergman and Scheele were cotemporary with Priestley in England, and Lavosier in France; then followed Thomson, Davy, and other distinguished men.

**CHERRIES.** They were brought from Pontus, to Lucullus, to Rome, about 70 B. C. Apricots from Epirus; peaches from Persia; the finest plums from Damascus and Armenia; pears and figs from Greece and Egypt; citrons from Media; and pomegranates from Carthage; 114 B. C. The cherry tree was first planted in Britain, it is said, about A. D. 100. Fine kinds were brought from Flanders, and planted in Kent, and with such success that an orchard of thirty-two acres produced in one year £1000, A. D. 1540. See *Gardening*.

**CHESAPEAKE, BATTLE OF.** At the mouth of the bay of that name, between the British admiral Greaves, and the French admiral De Grasse, with the naval force sent to assist the United States; the former was obliged to retire, 1781. The Chesapeake and Delaware were blockaded by a British fleet in 1812. The *Chesapeake* American frigate struck to the *Shannon* British frigate, commanded by captain Broke, after a severe action, June 2, 1813.

**CHESS, GAME OF.** Invented, according to some authorities, 680 B. C.; and according to others, in the fifth century of our era. The learned Hyde and Sir William Jones concur in stating (as do most writers on the subject) that the origin of chess is to be traced to India. The automaton chess-player was exhibited in England in 1769.

**CHEVALIER D'EON.** This extraordinary personage, who had been acting in a diplomatic capacity in several countries, and who was for some time a minister plenipotentiary from France in London, was proved upon a trial had in the King's Bench, in an action to recover wagers as to his sex, to be a woman, July 1, 1777. He subsequently wore female attire for many years; yet at his death, in London, in 1810, it was manifest, by the dissection of his body, and other undoubted evidence, that he was of the male sex.—*Bio. Dic.*

**CHILDREN.** Most of the ancient nations had the unnatural custom of exposing their infants—the Egyptians on the banks of rivers, and the Greeks on highways—when they could not support or educate them; in such cases they were taken care of, and humanely protected by the state. The custom which long previously existed of English parents selling their children to the Irish for slaves, was prohibited in the reign of Canute, about 1017.—*Mat. Paris.* At Darien, it was the practice when a widow died, to bury with her, in the same grave, such of her children as were unable, from their tender years, to take care of themselves. And in some parts of China, superstition has lent her hand to sanction the horrid deed of offering infants to the spirit of an adjoining river, first attaching a gourd to their necks to prevent them from immediately drowning.

**CHILI.** Discovered by Diego de Almagro, one of the conquerors of Peru, A. D. 1535. Almagro crossed the Cordilleras, and the natives, regarding the Spaniards on their first visit as allied to the Divinity, collected for them gold and silver, amounting to 290,000 ducats, a present which led to the subsequent cruelties and rapacity of the invaders. Chili was subdued, but not wholly, in 1546. The Chilians fought for liberty at various times, and with various success, until 1817, when, by the decisive victory gained by San Martin over

the royal forces, Feb. 12, in that year, the province was released from its oppressors, and declared independent.

**CHILTERN HUNDREDS.** An estate of the crown in England, on the chain of chalk hills that pass from east to west through the middle of Buckinghamshire, the stewardship whereof is a nominal office, conferred on members of parliament when they wish to vacate their seats, as, by accepting an office under the crown, a member becomes disqualified, unless he be again returned by his constituents: this custom has existed time immemorial.

**CHIMNEYS.** Chafing-dishes were in use previous to the invention of chimneys, which were first introduced into these countries in A. D. 1200, when they were confined to the kitchen and large hall. The family sat round the stove, the funnel of which passed through the ceiling, in 1300. Chimneys were general in domestic architecture in 1810. The ancients made use of stoves, although Octavio Ferrari affirms that chimneys were in use among them; but this is disputed.

**CHINA.** This empire is very ancient, and the Chinese assert that it existed many thousands of years before Noah's flood; but it is allowed by some authorities to have commenced about 2500 years before the birth of Christ. By others it is said to have been founded by Fohi, supposed to be the Noah of the Bible, 2240 B. C. We are told that the Chinese knew the periods of the sun, moon, and planets, and were acute astronomers, in the reign of Yao, which is set down 2357 B. C. But dates cannot be relied upon until towards the close of the seventh century, B. C. when the history of China becomes more distinct. In the battle between Phraates and the Scythians 129 B. C., the Chinese aided the latter, and afterwards ravaged the countries on the coasts of the Caspian, which is their first appearance in history.—*Lenglet.*

 Heights behind Canton taken, and 94 guns captured - May 25, 1841  
 The city ransomed for 6,000,000 dollars, of which 5,000,000 are paid down, and hostilities cease - May 31, 1841  
 British trade re-opened - July 16, 1841  
 Arrival at Macao of Sir Henry Pottinger, who, as plenipotentiary, proclaims the objects of his mission; Capt. Elliott superseded - Aug. 10, 1841  
 Amoy taken, and 296 guns found and destroyed - Aug. 27, 1841  
 The Bogue forts destroyed - Sept. 14, 1841  
 The city of Ting-hae taken, 136 guns captured, and the island of Chusan re-occupied by the British - Oct. 1, 1841  
 Chin-hae taken, with 157 guns, many of them brass - Oct. 10, 1841

Treaty of peace signed before Nankin, on board the *Cornwallis* by Sir Henry Pottinger for England, and Keying Kiepo and Neu-Kien on the part of the Chinese emperor - Aug. 29, 1842  
 CONDITIONS OF THE TREATY.

Lasting peace and friendship between the two empires.  
 China to pay 21,000,000 of dollars, part forthwith and the remainder within three years.  
 The ports of Canton, Amoy, Foo-choo-foo, Ning-po, and Shang-hae to be thrown open to the British.  
 Consuls to reside at these cities.  
 Tariffs of import and export to be established, &c. &c.  
 The emperor signifies his assent to the conditions - Sept. 8, 1842  
 Mr. Davis succeeds Sir Henry Pottinger as British commissioner - Feb. 16, 1844  
 Bogue Forts captured by Gen. Aguilar and Sir John Davis, 836 pieces of artillery seized and spiked - April 5, 1847  
 Treaty between China and the United States negotiated by Caleb Cushing, American Commissioner - July 3, 1844  
 - ratified at Washington Jan. 16, 1845  
 Alexander H. Everett appointed commissioner to China from the United States - 1845  
 John W. Davis appointed commissioner from the United States - 1847

## CHINESE EMPERORS.

The following is a list of those who have reigned for the last two centuries:—

|                           |   |      |
|---------------------------|---|------|
| Chwang-lei                | - | 1627 |
| Shun-che                  | - | 1644 |
| Kang-he                   | - | 1669 |
| Yung-ching                | - | 1693 |
| Keen-lung                 | - | 1736 |
| Kea-ding                  | - | 1796 |
| Taou-kwang                | - | 1821 |
| Sze-Hing, present emperor | - | 1850 |

The embassy of lord Macartney from England procured the first authentic information respecting this empire: it appears that it is divided into 15 provinces, containing 4402 walled cities; the population of the whole country is given at 333,000,000; its annual revenues at £66,000,000; and the army, including the Tartars, 1,000,000 of infantry, and 800,000 cavalry; the religion is pagan, and the government is absolute. Learning, with the arts and sciences in general, are encouraged, and ethics are studied profoundly, and influence the manners of the people. See details in *Williams's "Middle Kingdom."*

**CHINA PORCELAIN.** This manufacture is first mentioned in history in 1531; it was introduced into England so early as the sixteenth century. Porcelain was made at Dresden in 1706; fine ware in England, at Chelsea, 1752; at Bow in 1758; in various other parts of England, about 1760; and by the ingenious Josiah Wedgwood, who much improved the British manufacture, in Staffordshire, 1762 *et seq.*

**CHINESE ERAS.** They are very numerous, fabulous, and mythological. Like the Chaldeans, they represent the world as having existed some hundreds of thousands of years; and their annals and histories record events

said to have occurred, and name philosophers and heroes said to have lived, more than 27,000 years ago. By their calculation of time, which must, of course, differ essentially from ours, they date the commencement of their empire 41,000 years B. C.—*Abbé Lenglet*.

**CHIPPEWA, BATTLES OF.** The British forces under general Riall were defeated by the Americans under general Brown, July 5, 1814. Another action with the British, commanded by generals Drummond and Riall; the latter taken prisoner at Bridgewater, near Chippewa, July 25, 1814.

**CHIVALRY.** Began in Europe about A. D. 912. From the twelfth to the fifteenth century it had a considerable influence in refining the manners of most of the nations of Europe. The knight swore to accomplish the duties of his profession, as the champion of God and the ladies. He devoted himself to speak the truth, to maintain the right, to protect the distressed, to practise courtesy, to fulfil obligations, and to vindicate, in every perilous adventure, his honor and character. Chivalry, which owed its origin to the feudal system, expired with it.—*Robertson ; Gibbon*.

**CHIVALRY, COURT OF.** It was commonly after the lie-direct had been given, that combats took place in the court of chivalry. By letters patent of James I. the earl-marshal of England had "the like jurisdiction in the court of chivalry, when the office of lord high constable was vacant, as this latter and the marshal did jointly exercise," 1623. The following entries are found in the pipe-roll of 31 Henry I., the date of which has been fixed by the labors of the record commission:—"Robert Fitz Seward renders account of fifteen marks of silver, *for the office and wife of Hugh Chivill*. Paid into the exchequer four pounds. And he owes six pounds;" p. 53. "William de Hooton renders account of ten marks of gold *that he may have the wife of Geoffrey de Faucre in marriage*, with her land, and may have her son in custody until he is of age to become a knight; he paid into the exchequer ten marks of gold, and is discharged."—*Parl. Reports*.

**CHOCOLATE.** First introduced into Europe from Mexico about A. D. 1520. It is the flour of the cocoa-nut, and makes a wholesome beverage, much used in Spain. It was sold in the London coffee-houses soon after their establishment, 1650.—*Tatler*.

**CHOIR.** The choir was separated from the nave of the church in the time of Constantine. The choral service was first used in England at Canterbury, A. D. 677. The service had been previously in use at Rome about 602.—See *Chanting*. The *Choragus* was the superintendent of the ancient chorus.—*Warburton*.

**CHOLERA MORBUS.** This fatal disease, known in its more malignant form as the Asiatic cholera, after having made great ravages in many countries of the north, east, and south of Europe, and in the countries of Asia, where alone it had carried off more than 900,000 persons in its progress within two years, made its first appearance in England, at Sunderland, October 26, 1831. Proclamation, ordering all vessels from Sunderland to London, to perform quarantine at the Nore, December 4, 1831. Cholera first appeared at Edinburgh, Feb. 6, 1832. First observed at Rotherhithe and Limehouse, London, February 13; and in Dublin, March 3, same year. The mortality was very great, but more so on the Continent; the deaths by Cholera in Paris were 18,000 between March and August, 1832. Cholera first appeared on this continent at Quebec, June 8, 1832; and at New-York, June 27, 1832. Cholera again raged in Rome, the Two Sicilies, Genoa, Berlin, &c. in 1836-7. It again appeared in Asia and the east of Europe in 1848, and raged in London, Edinburgh, Liverpool, and Paris at intervals, in 1848-9. First appeared again on this continent in 1849, on the Mississippi, in New York in

May, and continued more or less in various parts of the United States until November of that year.

**CHRIST.** See **JESUS CHRIST.** This name, so universally given to the Redeemer of the world, signifies, in Greek, *The Anointed*, being the same with *Messiah* in the Hebrew, which the Jews called that Saviour and Deliverer whom they expected, and who was promised to them by all the prophets. This appellation is commonly put to our *Jesus* (signifying *Saviour*), the name of the great object of our faith, and divine author of our religion. St. Clement, the earliest father, according to St. Epiphanius, fixes the birth of **CHRIST** on the 18th of November, in the 28th year of Augustus, *i. e.* two years before the Christian era as adopted in the sixth century. Cerinthus was the first Christian writer against the divinity of Christ, about A. D. 67. The divinity of Christ was adopted at the council of Nice, in A. D. 325, by two hundred and ninety-nine bishops against eighteen.

**CHRISTIAN.** This name was first given to the believers and followers of **CHRIST's** doctrines at Antioch, in Syria, *Acts* xi. 26, in the year 38, according to *Butler*; in the year 40, according to *Tacitus*; and according to other authorities in the year 60. The Christians were divided into episcopoi, presbyteroi, diaconoi, pistoi, catachumens, or learners, and energumens who were to be exorcised.

**CHRISTIAN ERA.** The era which is used by almost all Christian nations; it dates from January 1st, in the middle of the fourth year of the 194th Olympiad, in the 753d of the building of Rome, and 4714th of the Julian period. It was first introduced in the sixth century, but was not very generally employed for some centuries after. We style the Christian era A. D. 1. It was first used in modern chronology in 516.

**CHRISTIAN KING; MOST CHRISTIAN KING; Christianissimus.** This title was given by pope Paul II. to Louis XI. of France in 1469; and never was a distinction more unworthily conferred. His tyranny and oppressions obliged his subjects to enter into a league against him; and 4,000 persons were executed publicly or privately in his merciless reign.—*Henault; Fleury.*

**CHRISTIANITY.** Founded by the Saviour of the world. The persecutions of the Christians commenced A. D. 64.—See *Persecutions.* Christianity was first taught in Britain about this time; and it was propagated with some success in 156.—*Bede.* Lucius is said to have been the first Christian king of Britain, and in the world: he reigned in 179. But the era of Christianity in England commenced with the mission of St. Austin in 596, from which time it spread rapidly throughout the whole of Britain.\* It was introduced into Ireland in the second century, but with more success after the arrival of St. Patrick in 432. It was received in Scotland in the reign of Donald I. about 201, when it was embraced by that king, his queen, and some of his nobility.

|                                                                                   |        |                                                                                                                                     |

\* It is said that Gregory the Great, shortly before his elevation to the papal chair, chanced one day to pass through the slave-market at Rome, and perceiving some children of great beauty who were set up for sale, he inquired about their country, and finding they were English Pagans, he is said to have cried out, in the Latin language, "*Non Angli, sed Angeli, forent, si essent Christiani.*"

Christianity was propagated in various parts of Africa, as Guinea, Angola, and Congo, in the fifteenth century; and in America and India it made some progress in the sixteenth, and now rapidly gains ground in all parts of the world.

**CHRISTMAS-DAY.** A festival of the church, universally observed in commemoration of the nativity of our Saviour. It has been denominated *Christ-mass*, from the appellative Christ having been added to the name of Jesus to express that he was the Messiah, or *The Anointed*. It was first observed as a festival A. D. 98. Ordered to be held as a solemn feast, and Divine service to be performed on the 25th of December, by pope Telesphorus, about A. D. 137.\* In the eastern primitive church, Christmas and Epiphany (*which see*) were deemed but one and the same feast; and to this day the church universally keeps a continued feast within those limits. The holly and misletoe used at Christmas are remains of the religious observances of the Druids, and so with many other like customs.

**CHRONICLES.** The earliest chronicles are those of the Chinese, Hindoos, Jews, and perhaps those of the Irish. After the invention of writing, all well-informed nations appear to have kept chroniclers, who were generally priests or astrologers, and who mingled popular legends with their records.  
—*Phillips.*

**CHRONOLOGY.** The Chinese pretend to the most ancient, but upon no certain authority. The most authentic, to which all Europe gives credit, is the Jewish; but owing to the negligence of the Jews, they have created abundance of difficulties in this science, and very little certainty can be arrived at as to the exact time of many memorable events. The earliest epoch is the creation of the world, 4004 B. C. Theophilus, bishop of Antioch, was the first Christian chronologist, about A. D. 169. *See the different eras through the volume.*

**CHURCH.** It is said that a church was built for Christian worship in the first century; and some will have it that one was built in England, A. D. 60. *See Glastonbury.* In the small island of Whitehorn, Scotland, are the remains of an ancient church, which was the first place of Christian worship, it is believed, in that country, and supposed to have been built before the cathedral at Whitehorn, in Wigtonshire, where Nenian was bishop in the fourth century. The Christians originally preached in woods, and in caves, by candle-light, whence the practice of candle-light in churches. Most of the early churches were of wood. The first church of stone was built in London, in 1087. The first Irish church of stone was built at Bangor, in the county of Down, by Malachy, archbishop of Armagh, who was prelate in 1134.—*Gordon's Ireland.* Church towers were originally parochial fortresses. Churchyards were permitted in cities in 742.

**CHURCH OF ENGLAND, (the present).** Commenced with the Reformation, and was formally established in the reign of Henry VIII. 1534. This church consists of two archbishops and twenty-four bishops, exclusively of that of Sodor and Man; and the other dignitaries are chancellors, deans (of cathedrals and collegiate churches), archdeacons, prebendaries, canons, minor canons, and priest vicars; these, and the incumbents of rectories, vicarages,

---

that is, "they would not be English, but angels, if they were Christians." From that time he was struck with an ardent desire to convert that unenlightened nation, and ordered a monk, named Austin, or Augustin, and others of the same fraternity, to undertake the mission to Britain, in the year 596.—*Goldsmith.*

\* Diocletian, the Roman emperor, keeping his court at Nicomedia, being informed that the Christians were assembled on this day in great multitudes, to celebrate Christ's nativity, ordered the doors to be shut, and the church to be set on fire, and six hundred perished in the burning pile. This was the commencement of the tenth persecution, which lasted ten years, A. D. 303.

and chapelries, make the number of preferments of the established church, according to the last official returns, 12,327. The number of churches for Protestant worship in England was 11,742 in 1818.

**CHURCH OF IRELAND.** Called, in connection with that of England, the United Church of England and Ireland. Previously to the Church Temporalities Act of William IV. in 1833, there were four archbishoprics and eighteen bishoprics in Ireland, of which several have since ceased; that act providing for the union of sees, and for the abolition of certain sees, accordingly as the present possessors of them die. There are 1,659 places of Protestant worship, 2,109 Catholic chapels, 452 Presbyterian, and 414 other houses of prayer. See *Bishops*.

**CHURCH OF SCOTLAND.** Presbyterianism is the religion of Scotland. Its distinguishing tenets seem to have been first embodied in the formulary of faith attributed to John Knox, and compiled by that reformer in 1560. It was approved by the parliament and ratified in 1567; was finally settled by an act of the Scottish senate in 1696, and was afterwards secured by the treaty of union with England in 1707. Previously to the abolition of episcopacy in Scotland in 1688, there existed two archbishoprics and twelve bishoprics, which were then dissolved; but there are now six bishops. The Church of Scotland is regulated by four courts—the General Assembly, the Synod, the Presbytery, and Kirk Session. See *Presbyterians*.

**CHURCH MUSIC,** was introduced into the Christian church by Gregory the Great, in A. D. 602. Choir service was first introduced in England, at Canterbury, in 677. Church organs were in general use in the tenth century. Church music was first performed in English in 1559. See *Choir; Chanting*.

**CHURCH-WARDENS.** Officers of the parish church, appointed by the first canon of the synod of London in 1127. Overseers in every parish were also appointed by the same body, and they continue now nearly as then constituted.—*Johnson's Canons*.

**CHURCHING OF WOMEN.** It originated in the Jewish rite of purification, A. D. 214. Churching is the act of returning thanks in the church for any signal deliverance, and particularly after the delivery of women.—*Wheatley*. It was a Jewish law that a woman should keep within her house forty days after her lying in, if she had a son, and eighty if she had a daughter, at the expiration whereof she was to go to the temple, and offer a lamb with a young pigeon or turtle, and in case of poverty, two pigeons or turtles. See *Purification*.

**CIDER.** Anciently this beverage, when first made in England, was called wine, about A. D. 1284. When the earl of Manchester was ambassador in France, he is said to have frequently passed off cider upon the nobility of that country for a delicious wine. It was subjected to the excise regulations in England, 1763, *et seq.* A powerful spirit is drawn from cider by distillation.—*Buller*.

**CIMBRI.** The war of the Cimbri, 113 B. C. They defeat the consul Marcus Silanus, 109 B. C. They defeat the Romans under Manlius, on the banks of the Rhine, where 80,000 Romans are slain, 105 B. C. The Teutones are defeated by Marius in two battles at Aquæ Sextiæ (Aix) in Gaul, 200,000 are killed, and 70,000 made prisoners, 102 B. C. The Cimbri are defeated by Marius and Catullus as they were again endeavoring to enter Italy; 120,000 are killed, and 60,000 taken prisoners, 101 B. C. Their name afterwards sunk in that of the Teutones or Saxons.

**CINCINNATI, OHIO,** the most populous city west of the Alleghanies in the United States, was founded in 1789, by emigrants from New England and

New Jersey. Population in 1795, 500; in 1800, 750; in 1810, 2,540; in 1820, 9,642; in 1830, 24,831; in 1840, 46,338.

**CINCINNATI, SOCIETY OF.** Established by the officers of the American army, in 1783, after the Revolution, and still continued by them and their descendants. There was at one time a popular jealousy of this society as suggesting a sort of hereditary nobility or aristocracy; but this has long since passed away, and the society is now but seldom mentioned.

**CIRCASSIA.** The Circassians are descended from the Alanians. They continued unsubdued, even by the arms of the celebrated Timur; but in the sixteenth century the greater part of them acknowledged the authority of the Czar, Ivan II. of Russia. About A. D. 1745, the princes of Great and Little Kabarda took oaths of fealty to that power. One branch of their traffic is the sale of their daughters, famed throughout the world for their beauty, and whom they sell for the use of the seraglios of Turkey and Persia: the merchants who come from Constantinople to purchase these girls are generally Jews.—*Klaproth's Travels in the Caucasus and Georgia.*

**CIRCULATING LIBRARY.** The first in England, on a public plan, was opened by Samuel Fancourt, a dissenting minister of Salisbury, about 1740. He had little encouragement in the undertaking, which in the end failed.—*Ferguson's Biog.*

**CIRCULATION OF THE BLOOD,** and the motion of the heart in animals, confirmed experimentally by William Harvey, the celebrated English physician and anatomist, between 1619 and 1628. See article *Blood*. By this discovery the medical and surgical art became greatly improved, to the benefit of mankind.—*Freind's Hist. of Physic.*

**CIRCUMCISION.** A rite instituted 1897 B. C. It was the seal of the covenant made by God with Abraham.—*Josephus.* Even to the present day many of the Turks and Persians circumcise, although not regarding it as essential to salvation; but in some eastern and African nations it is rendered necessary by a peculiar conformation, and is used without any reference to a religious rite.—*Bell.* The festival of the Circumcision was originally called the Octave of Christmas. The first mention found of it is in A. D. 487. It was instituted by the church to commemorate the ceremony under the Jewish law to which Christ submitted on the eighth day of his nativity; it was introduced into the Liturgy in 1550.

**CIRCUMNAVIGATORS.** Among the greatest and most daring of human enterprises was the circumnavigation of the earth at the period when it was first attempted, A. D. 1519.\* The following are the most renowned of this illustrious class of men; their voyages were undertaken at the dates affixed to their names. See *Navigators.*

|                                                                 |                  |                                                                     |            |

|                                                                 |                  | D'Urville, French                                                   | - 1837     |

\* The first ship that sailed round the earth, and hence determined its being globular, was Magellan's, or Magelhoe's; he was a native of Portugal, in the service of Spain, and by keeping a westerly course he returned to the same place he had set out from in 1519. The voyage was completed in three years and twenty-nine days; but Magellan was killed on his homeward passage, at the Philippines, in 1521.—*Butler.*

Several voyages have been since undertaken, and, among other nations, by the Russians. The early navigators, equally illustrious, are named elsewhere.

**CIRCUS.** There were eight (some say ten) buildings of this kind at Rome; the largest of them was called the *Circus Maximus*, which was built by the elder Tarquin, 605 B. C.; it was of an oval figure; its length was three stadia and a half, or more than three English furlongs, and its breadth 960 Roman feet. This circus was enlarged by Cæsar so as to seat 150,000 persons, and was rebuilt by Augustus. All the emperors vied in beautifying it, and Julius Cæsar introduced in it large canals of water, which on a sudden could be covered with an infinite number of vessels, and represent a sea-fight.—*Pliny*.

**CISALPINE REPUBLIC.** Founded by the French in June 1797. It was acknowledged by the emperor of Germany to be independent, by the treaty of Campo Formio (*which see*), Oct. 17, following. Received a new constitution in Sept. 1798. It merged into the kingdom of Italy in March, 1805; Napoleon was crowned king in May following, and was represented by his viceroy, Eugene Beauharnois. See *Italy*.

**CISTERCIANS.** An order founded by Robert, a Benedictine, in the eleventh century. They became so powerful that they governed almost all Europe in spiritual and temporal concerns. They observed a continual silence, abstained from flesh, lay on straw, wore neither shoes nor shirts, and were most austere.—*De Vitri*.

**CITIES.** The word *city* has been in use in England only since the Conquest, at which time even London was called *Londonburgh*, as the capital of Scotland is still called *Edinburgh*. The English cities were very inconsiderable in the twelfth century. Cities were first incorporated A. D. 1079. The institution of cities has aided much in introducing regular governments, police, manners, and arts.—*Robertson*.

**CITIZEN.** It was not lawful to scourge a citizen of Rome.—*Livy*. In England a citizen is a person who is free of a city, or who doth carry on a trade therein.—*Camden*. Various privileges have been conferred on citizens as freemen in several reigns, and powers granted to them. The wives of citizens of London (not being aldermen's wives, nor gentlewomen by descent) were obliged to wear minever caps, being white woollen knit three-cornered, with the peaks projecting three or four inches beyond their foreheads; aldermen's wives made them of velvet, 1 Elizabeth, 1558.—*Stowe*. The title of citizen, only, was allowed in France at the period of the revolution, 1792, *et seq.*

**CIUDAD RODRIGO.** This strong fortress of Spain was invested by the French June 11, 1810; and it surrendered to them July 10, following. It remained in their possession until it was gallantly stormed by the British commanded by Wellington, Jan. 19, 1812. Wellington had made a previous attack upon Ciudad Rodrigo (Sept. 25, 1811), which ended in his orderly retreat from the position.

**CIVIL LAW.** Several codes come under this denomination of laws. A body of Roman laws, founded upon the laws of nature and of nations, was first collected by Alfrenus Varus, the Civilian, who flourished about 66 B. C.; and a digest of them was made by Servius Sulpicius, the Civilian, 53 B. C. The Gregorian laws were compiled A. D. 290; the Theodosian in 435; and the Justinian, 529–534. Many of the former laws having grown out of use, the emperor Justinian ordered a revision of them, which was called the Justinian code, and this code constitutes a large part of the present civil law. Civil law was restored in Italy, Germany, &c. 1127.—*Blackr*. Civil law was introduced into England by Theobald, a Norman abbot, who was afterwards

archbishop of Canterbury, in 1138. It is now used in the spiritual courts only, and in maritime affairs. See *Laws*.

**CIVIL LIST IN ENGLAND.** This comprehends the revenue awarded to the kings of England, partly in lieu of their ancient hereditary income. The entire revenue of Elizabeth was not more than 600,000*l.* and that of Charles I. was but 800,000*l.* After the Revolution a civil list revenue was settled on the new king and queen of 700,000*l.*, the parliament taking into its own hands the support of the forces, both maritime and military. The civil list of George II. was increased to 800,000*l.*; and that of George III. in the 55th year of his reign, was 1,030,000*l.* By the act 1 William IV. 1831, the civil list of that sovereign was fixed at 510,000*l.* By the act of 1 Victoria, Dec. 1837, the civil list of the queen was fixed at 385,000*l.*; and Prince Albert obtained an exclusive sum from parliament of 30,000*l.* *per ann.* 4 Victoria, 1840.

**CLANSHIPS.** These were tribes of the same race, and commonly of the same name, and originated in feudal times.—See *Feudal Laws*. They may be said to have arisen in Scotland, in the reign of Malcolm II., about 1008. Clanships and other remains of heritable jurisdiction were abolished in Scotland (where clans were taken to be the tenants of one lord), and the liberty of the English was granted to clansmen. 20 George II., 1746.—*Ruffhead*. The chief of each respective clan was, and is, entitled to wear two eagle's feathers in his bonnet, in addition to the distinguishing badge of his clan.—*Chambers*.

**CLARENDON, STATUTES OF.** These were statutes enacted in a parliament held at Clarendon, the object of which was to retrench the then enormous power of the clergy. They are rendered memorable as being the ground of Becket's quarrel with Henry II. A number of regulations were drawn up under the title of the statutes or constitutions of Clarendon, and were voted without opposition, A. D. 1164. These stringent statutes were enacted to prevent the chief abuses which at that time prevailed in ecclesiastical affairs, and put a stop to church usurpations which, gradually stealing on, threatened the destruction of the civil and royal power.—*Hume*.

**CLARION.** This instrument originated with the Moors, in Spain, about A. D. 800; it was at first a trumpet, serving as a treble to trumpets sounding their tenor and bass.—*Ashe*. Its tube is narrower, and its tone shriller than the common trumpet.—*Pardon*.

**CLASSIS.** The name was first given by Tullius Servius in making divisions of the Roman people. The first of six classes were called *classici*, by way of eminence, and hence authors of the first rank came to be called classics, 573 B. C.

**CLEMENTINES.** Apocryphal pieces, fable and error, attributed to a primitive father, Clemens Romanus, a cotemporary of St. Paul; some say he succeeded Peter as bishop of Rome. He died A. D. 102.—*Niceron*. Also the decretals of pope Clement V., who died 1314, published by his successor.—*Bowyer*. Also Augustine monks, each of whom having been a superior nine years, then merged into a common monk.

**CLEMENTINES AND URBANISTS.** Parties by whom Europe was distracted for several years. The Urbanists were the adherents of pope Urban VI., the others those of Robert, son of the count of Geneva, who took the title of Clement VII. All the kingdoms of Christendom according to their various interests and inclinations were divided between these two pontiffs; the courts of France, Castile, Scotland, &c. adhering to Clement, and Rome, Italy, and

England declaring for Urban. This contention was consequent upon the death of Gregory XI. 1378.—*Hume*.

**CLERGY.** In the first century the clergy were distinguished by the title of presbyters or bishops. The bishops in the second century assumed higher functions, and the presbyters represented the inferior priests of the Levites: this distinction was still further promoted in the third century; and, under Constantine, the clergy attained the recognition and protection of the secular power.

**CLERGY IN ENGLAND.** They increased rapidly in number early in the seventh century, and at length controlled the king and kingdom. Drunkenness was forbidden among the clergy by a law, so early as 747 A. D. The first fruits of the then clergy were assigned by parliament to the king, 1534. The clergy were excluded from parliament in 1536. The conference between the Protestant and Dissenting clergy was held in 1604. See *Conference*. Two thousand resigned their benefices in the church of England, rather than subscribe their assent to the book of common prayer, including the thirty-nine articles of religion, as enjoined by the Act of Uniformity, 1661-2. The Irish Protestant clergy were restored to their benefices, from which they had been expelled, owing to the state of the kingdom under James II., 1689. The Clergy Incapacitation act passed, 1801. See *Church of England*.

**CLERK.** The Clergy were first styled clerks, owing to the judges being chosen after the Norman custom from the sacred order; and the officers being clergy; this gave them that denomination, which they keep to this day.—*Blackstone's Comm.*

**CLOCK.** That called the clepsydra, or water-clock, was introduced at Rome 158 B. C. by Scipio Nasica. Toothed wheels were applied to them by Ctesibius, about 140 B. C. Said to have been found by Cæsar on invading Britain, 55 B. C. The only clock supposed to be then in the world was sent by pope Paul I. to Pepin, king of France, A. D. 760. Pacificus, archdeacon of Verona, invented one in the ninth century. Originally the wheels were three feet in diameter. The earliest complete clock of which there is any certain record, was made by a Saracen mechanic, in the 13th century.

|                                                                                                   |                                                                                                 |            |

| The scapement, ascribed to Gerbert, A. D. 1000                                                    | den) and the younger Galileo constructed the pendulum                                           | A. D. 1641 |
| A clock constructed by Richard, abbot of St. Alban's, about                                       | Christian Huygens contested this discovery, and made his pendulum clock some time previously to | 1658       |
| A striking clock in Westminster                                                                   | Fromant, a Dutchman, improved the pendulum, about                                               | 1659       |
| A perfect one made at Paris by Vick                                                               | Repeating clocks and watches invented by Barlow, about                                          | 1676       |
| The first portable one made                                                                       | The dead beat, and horizontal escapements, by Graham, about                                     | 1700       |
| In England no clock went accurately before that set up at Hampton-court (maker's initials, N. O.) |                                                                                                 |            |
| Richard Harris (who erected a clock in the church of St. Paul, Covent-Gar-                        |                                                                                                 |            |

The subsequent improvements were the spiral balance spring suggested, and the duplex scapement invented by Dr. Hooke; pivot holes jewelled by Facio; the detached scapement invented by Mudge, and improved by Berthoud, Arnold, Earnshaw and others.

**CLOCK, MAGNETIC.** Invented by Dr. Locke of Cincinnati, 1847-8.

**CLOTH.** Both woollen and linen cloth were known in very early times. Coarse woollens were introduced into England A. D. 1191; and seventy families of cloth-workers from the Netherlands settled in England by Edward III.'s invitation, and the art of weaving was thereby introduced, 1331.—*Rymer's Fædera*. Woollens were first made at Kendal, in 1390. Medleys were manufactured, 1614. Our fine broad cloths were yet sent to Holland to be dyed, 1654. Dyed and dressed in England, by one Brewer, from the Low Countries, 1667. The manufacture was discouraged in Ireland and that of linen

countenanced, at the request of both houses of parliament, 1698. See *Woollen Cloth*.

**CLOVIS, FAMILY OF.** Kings of France. The real founder of the French monarchy was Clovis I., who commenced his reign A. D. 481, and was a warlike prince. He expelled the Romans, embraced the Christian religion, and published the Salique law. On his being first told of the sufferings of Christ, he exclaimed, "O, had I been there with my valiant Gauls, how I would have avenged him!" Clovis united his conquests from the Romans, Germans, and Goths, as provinces to the then scanty dominions of France: removed the seat of Government from Soissons to Paris, and made this the capital of his new kingdom; he died in 511.—*Henault*.

**COACH.** The coach is of French invention. Under Francis I., who was a contemporary with our Henry VIII., there were but two in Paris, one of which belonged to the queen, and the other to Diana, the natural daughter of Henry II. There were but three in Paris in 1550; and Henry IV. had one, but without straps or springs. The first courtier who set up this equipage was John de Laval de Bois-Dauphin, who could not travel otherwise on account of his enormous bulk. Previously to the use of coaches the kings of France travelled on horseback, the princesses were carried in litters, and ladies rode behind their squires. The first coach seen in England was in the reign of Mary, about 1553.—*Priestley's Lect.* They were introduced much earlier.—*Andrews's Hist. Great Brit.* They were introduced by Fitz-Allen, earl of Arundel, in 1580.—*Stowe*. And in some years afterwards the art of making them.—*Anderson's Hist. of Commerce*. A bill was brought into parliament to prevent the effeminacy of men riding in coaches, 43 Eliz. 1601.\*—*Carle*. See *Carriages, Hackney Coaches, Mail Coaches, &c.*

**COALITIONS.** The great coalitions against France since the period of the French revolution, have been six in number; and they generally arose out of the subsidizing by England of the great powers of the Continent. They were entered into as follows:

- |                                                                                                  |                                                                                 |
|--------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 1st. The king of Prussia issues his manifesto . . . June 26, 1792                                | 4th. By Great Britain, Russia, Prussia, and Saxony . . . Oct. 6, 1806           |
| 2nd. By Great Britain, Germany, Russia, Naples, Portugal, and Turkey, signed . . . June 22, 1799 | 5th. By England and Austria . . . April 6, 1809                                 |
| 3rd. By Great Britain, Russia, Austria, and Naples . . . Aug. 5, 1805                            | 6th. By Russia and Prussia; the treaty ratified at Kalisch . . . March 17, 1813 |
|                                                                                                  | See <i>Treaties</i> .                                                           |

**COALITION MINISTRY.** This designation was given to the celebrated ministry of Mr. Fox and lord North, and which was rendered memorable as an extraordinary union in political life, on account of the strong personal dislike which had always been displayed by these personages, each towards the other. The ministry was formed April 5, 1783, and dissolved Dec. 19, same year. See *Administrations*.

**COALS.** It is contended, with much seeming truth, that coals, although they are not mentioned by the Romans in their notices of Britain, were yet in use by the ancient Britons.—*Brandt*. They were first discovered at Newcastle-upon-Tyne in 1234, some say earlier; and others in 1239. Sea-coal was prohibited from being used in and near London, as being "prejudicial to human health;" and even smiths were obliged to burn wood, 1273.—*Stowe*. Coals were first made an article of trade from Newcastle to London, 4 Richard II. 1381.—*Rymer's Fœdera*. Notwithstanding the many previous complaints

\* In the beginning of the year 1619, the earl of Northumberland, who had been imprisoned ever since the Gunpowder Plot, obtained his liberation. Hearing that Buckingham was drawn about with six horses in his coach (being the first that was so), he put on eight to his, and in that manner passed from the tower through the city.—*Rapin*.

against coal as a public nuisance, it was at length generally burned in London in 1400; but coals were not in common use in England until the reign of Charles I., 1625.

**NUMBER OF CHALDRONS OF COALS CONSUMED IN LONDON IN THE FOLLOWING YEARS:**

|      |   |   |                |      |   |   |                  |      |   |   |                  |
|------|---|---|----------------|------|---|---|------------------|------|---|---|------------------|
| 1650 | - | - | 150,000 chald. | 1800 | - | - | 814,000 chald.   | 1830 | - | - | 1,583,360 chald. |
| 1760 | - | - | 317,000 ditto. | 1810 | - | - | 980,372 ditto.   | 1835 | - | - | 2,299,816 tons.  |
| 1750 | - | - | 510,000 ditto. | 1820 | - | - | 1,171,178 ditto. | 1840 | - | - | 2,638,256 ditto. |

The coal-fields of Durham and Northumberland are 723 square miles in extent; those of Newcastle, Sunderland, Whitehaven, and other places, are also of vast magnitude; and there are exhaustless beds of coal in Yorkshire. The coal in South Wales alone, would, at the present rate of consumption, supply all England for 2000 years.—*Blakewell*. It is supposed that there are now about 25,000,000 of tons consumed annually in Great Britain.—*Phillips*. Scotland teems with the richest mines of coal, and besides her vast collieries there must be vast fields unexplored.—*Pennant*. Fine coal is found in Kilkenny, Ireland. The first ship laden with Irish coal arrived in Dublin from Newry, in 1742.—*Burns*.

**COALS IN THE UNITED STATES.** Lehigh coal from Mauch Chunk, Pennsylvania, first mined and used, 1806. According to Mr. Lyell, the coal strata in Pennsylvania, Ohio, &c., extend 700 miles.

**COCCEIANS.** A sect founded by John Cocceius of Bremen; they held, amongst other singular opinions, that of a visible reign of Christ in this world, after a general conversion of the Jews and all other people to the Christian faith, 1665.

**COCHINEAL.** The properties of this insect became known to the Spaniards soon after their conquest of Mexico, in 1518. Cochineal was not known in Italy in 1548, although the art of dyeing then flourished there.—See *Dyeing*. The annual import of this article into England was 260,000 lbs. in 1830; and 1,081,776, in 1845.

**COCK-FIGHTING.** Practised by the early barbarous nations, and by Greece. It was instituted at Rome after a victory over the Persians, 476 B.C.; and was introduced by the Romans into England. William Fitz-Stephen, in the reign of Henry II., describes cock-fighting as the sport of school-boys on Shrove Tuesday. Cock-fighting was prohibited, 39 Edward III., 1365; and again by Henry VIII. and Cromwell. Till within these few years there was a *Cock-pit Royal*, in St. James's-park: but this practice is happily now discouraged by the law.

**COCK-LANE GHOST.** A famous imposition (?) practised upon the credulous multitude by William Parsons, his wife, and daughter. The contrivance was that of a female ventriloquist, and all who heard her believed she was a ghost: the deception, which arose in a malignant conspiracy, was carried on for some time at the house, No. 33 Cock-lane, London; but it was at length detected, and the parents were condemned to the pillory and imprisonment, July 10, 1762.

**COCOA.** Unknown in Europe until the discovery of America, about 1500. The cocoa-tree supplies the Indians with almost whatever they stand in need of, as bread, water, wine, vinegar, brandy, milk, oil, honey, sugar, needles, clothes, thread, cups, spoons, basins, baskets, paper, masts for ships, sails, cordage, nails, covering for their houses, &c.—*Ray*.

**CODES OF LAWS.** The laws of Phoroneus were instituted 1807 B.C.: those of Lycurgus, 884 B.C.; of Draco, 623 B.C.; of Solon, 587 B.C. Alfenus Varus, the civilian, first collected the Roman laws about 66 B.C.; and Servius Sulpicius, the civilian, embodied them about 53 B.C. The Gregorian and Hermoginian codes were published A.D. 290; the Theodosian code in 435; the celebrated code of the emperor Justinian, in 529—a digest from

this last was made in 533.—*Blair*. Alfred's code of laws is the foundation of the common law of England, 887.—See *Laws*.

**CODICILS TO WILLS.** C. Trebatius Testa, the civilian of Rome, was the first who introduced the use of this supplementary instrument to wills, about 31 B. C.

**CŒUR DE LION, OR THE LION-HEARTED.** The surname given to Richard Plantagenet I. of England, on account of his dauntless courage, about A. D. 1192. This surname was also conferred on Louis VIII. of France, who signalized himself in the crusades and in his wars against England, about 1223. This latter prince had also the appellation of the *Lion* given him.

**COFFEE.** It grows in Arabia, Persia, the Indies, and America. Its use as a beverage is traced to the Persians.\* It came into great repute in Arabia Felix about A. D. 1454; and passed thence into Egypt and Syria, and thence, in 1511, to Constantinople, where coffee-houses were opened in 1554. M. Thevenot, the traveller, was the first who brought it into France, to which country he returned after an absence of seven years, in 1662.—*Chambers*. Coffee was brought into England by Mr. Nathaniel Canopus, a Cretan, who made it his common beverage at Baliol College, Oxford, in 1641.—*Anderson*.

**COFFEE AND TEA.** The consumption in the United States at different periods is reported by the secretary of the treasury (see *American Almanac*, 1848) thus:—

|      |   |   |   |                     |   |   |   |                         |
|------|---|---|---|---------------------|---|---|---|-------------------------|
| 1821 | - | - | - | Tea, 4,586,223 lbs. | - | - | - | Coffee, 11,886,063 lbs. |
| 1830 | - | - | - | " 6,373,091 lbs.    | - | - | - | " 38,363,687 lbs        |
| 1885 | - | - | - | " 12,331,638 lbs.   | - | - | - | " 91,753,002 lbs.       |
| 1842 | - | - | - | " 13,482,645 lbs.   | - | - | - | " 107,337,567 lbs.      |
| 1846 | - | - | - | " 16,891,020 lbs.   | - | - | - | " 124,336,054 lbs.      |

**COFFEE-HOUSES.** The first in England was kept by a Jew, named Jacobs, in Oxford, 1650. In that year, Mr. Edwards, an English Turkey merchant, brought home with him a Greek servant named Pasquet, who kept the first house for making coffee in London, which he opened in George-yard, Lombard-street, in 1652. Pasquet afterwards went to Holland, and opened the first house in that country.—*Anderson*. The Rainbow coffee-house, near Temple-bar, was represented as a nuisance to the neighborhood, 1657. Coffee-houses were suppressed by proclamation, 26 Charles II., 1675. The proclamation was afterwards suspended on the petition of the traders in tea and coffee.

**COFFEE-TREES.** These trees were conveyed from Mocha to Holland in 1616; and were carried to the West Indies in the year 1726. First cultivated at Surinam by the Dutch about 1718. The culture was encouraged in the plantations about 1732.

**COFFINS.** The Athenian heroes were buried in coffins of the cedar tree; owing to its aromatic and incorruptible qualities.—*Thucydides*. Coffins of marble and stone were used by the Romans. Alexander is said to have been buried in one of gold: and glass coffins have been found in England.—*Gough*. The earliest record of wooden coffins amongst us, is that of the burial of king Arthur, who was buried in an entire trunk of oak, hollowed, A. D. 542.—*Asser*. The patent coffins were invented in 1796.

**COIN.** Homer speaks of brass money as existing 1184 B. C. The invention of coin is ascribed to the Lydians, who cherished commerce, and whose money

\* Some ascribe the discovery of coffee as a beverage to the prior of a monastery, who, being informed by a goat-herd that his cattle sometimes browsed upon the tree, and that they would then wake at night, and sport and bound upon the hills, became curious to prove its virtues. He accordingly tried it on his monks, to prevent their sleeping at matins, and he found that it checked their slumbers.

was of gold and silver. Both were coined by Phidon tyrant of Argos, 862 B. C. Money was coined at Rome under Servius Tullius, about 573 B. C. The most ancient known coins are Macedonian, of the fifth century B. C.; but others are believed to be more ancient. Brass money only was in use at Rome previously to 269 B. C. (when Fabius Pictor coined silver), a sign that little correspondence was then held with the East, where gold and silver were in use long before. Gold was coined 206 B. C. Iron money was used in Sparta, and Iron and tin in Britain.—*Dufresnoy*. Julius Cæsar was the first who obtained the express permission of the senate to place his portrait on the coins, and the example was soon followed. In the earlier and more simple days of Rome, the likeness of no living personage appeared upon their money: the heads were those of their deities, or of those who had received divine honors.

**COIN IN ENGLAND.** The first coinage in England was under the Romans at Camulodunum, or Colchester. English coin was of different shapes, as square, oblong, and round, until the middle ages, when round coin only was used. Groats were the largest silver coin until after A. D. 1351. Coin was made sterling in 1216, before which time rents were mostly paid in kind, and maney was found only in the coffers of the barons.—*Slowe*

|                                                                                  |                                                                   |      |
|----------------------------------------------------------------------------------|-------------------------------------------------------------------|------|
| The first gold coins on certain record, struck, 42 Henry III. . . . . A. D. 1257 | end to the circulation of private lead-<br>on pieces, &c. . . . . | 1620 |
| Gold florin first struck, Ed. III. ( <i>Camden</i> ) . . . . . 1337              | Halfpence and farthings coined . . . . .                          | 1665 |
| First large copper coinage, putting an                                           | Guineas first coined, 25 Char. II. . . . .                        | 1673 |
|                                                                                  | Sovereigns, new coinage . . . . .                                 | 1816 |
|                                                                                  | Half-farthings . . . . .                                          | 1843 |

Gold coin was introduced in six shilling pieces by Edward III. and nobles followed, at six shillings and eightpence, and hence the lawyer's fee: afterwards there were half and quarter nobles. Guineas were of the same size; but being made of a superior gold from sovereigns, guineas passed for more. See *Guineas*. English and Irish money were assimilated Jan. 1. 1826. See *Gold*.

**MONEYS COINED IN THE FOLLOWING REIGNS, AND THEIR AMOUNT.**

|                               |                             |                                                   |
|-------------------------------|-----------------------------|---------------------------------------------------|
| Elizabeth . . . £5,832,000    | James II. . . - £3,740,600  | George III. and regency, gold . . . - £74,501,586 |
| James I. . . . - 2,500,000    | William III. . - 10,511,900 | George IV. . . - 41,762,815                       |
| Charles I. . . . - 10,500,000 | Anne . . . . - 2,691,626    | William IV. . . - 10,827,603                      |
| Cromwell . . . - 1,000,000    | George I. . . - 8,725,920   | Victoria, to 1848, . 32,370,814                   |
| Charles II. . . . - 7,524,100 | George II. . . - 11,966,576 |                                                   |

The coin of the realm was about twelve millions in 1711.—*Davenant*. It was estimated at sixteen millions 1762.—*Anderson*. It was supposed to be twenty millions in 1786.—*Chalmers*. It amounted to thirty-seven millions in 1800.—*Phillips*. The gold is twenty-eight millions, and the rest of the metallic currency is thirteen millions, while the paper largely supplies the place of coin, 1830.—*Duke of Wellington*. In 1841, it may be calculated as reaching forty-five millions. See *Gold*.

**COIN OF THE U. S.** The U. S. Mint was established in 1792. The coinage from that time to 1836 was thus:—

|                             | Pieces.             | Value.        |
|-----------------------------|---------------------|---------------|
| Gold . . . . .              | 4,716,325           | \$22,102,035  |
| Silver . . . . .            | 115,421,762         | 46,739,182    |
| Copper . . . . .            | 77,752,965          | 740,331       |
| Total . . . . .             | 197,891,502         | \$69,581,549  |
| 1837 to 1848 inclusive      | 145,389,748         | \$81,436,165  |
| Total in 56 years . . . . . | 343,281,250 pieces. | \$151,017,714 |

The gold coinage consists of double eagles \$20, eagles, half eagles, quarter eagles and dollars. Gold dollars were first coined in 1849. The first deposit of California gold for coining, was made by Mr. David Carter, 1804 ounces, Dec. 8, 1848.

**COINING.** This operation was originally performed by the metal being placed between two steel dies, and struck by a hammer. In 1553, a mill was invented by Antonie Brucher, and introduced into England in 1562. An engine for coining was invented by Balancier in 1617. The great improvements of the art were effected by Boulton and Watt, at Soho, 1788, and subsequently. The art was rendered perfect by the creation of the present costly machinery at the mint, London, commenced in 1811.

**COLD.** The extremes of heat and cold are found to produce the same perceptions on the skin, and when mercury is frozen at forty degrees below zero, the sensation is the same as touching red-hot iron. During the hard frost 1740, a palace of ice was built at St. Petersburg, after an elegant model, and in the just proportions of Augustan architecture.—*Greig.* Perhaps the coldest day ever known in London was Dec. 25, 1796, when the thermometer was 16° below zero. Quicksilver was frozen hard at Moscow Jan. 13, 1810. See *Frosts, Ice.*

**COLISÆUM.** The edifice of this name at Rome was built by Vespasian, in the place where the basin of Nero's gilded house had previously been A. D. 72. The splendid Colisæum of London, and one of its most worthy objects of admiration, is built near the Regent's Park, and was completed in 1827-8.

**COLLEGES.** University education preceded the erection of colleges, which were munificent foundations to relieve the students from the expense of living at lodging-houses and at inns. Collegiate or academic degrees are said to have been first conferred at the University of Paris, A. D. 1140; but some authorities say, not before 1215. In England, it is contended that the date is much higher, and some hold that Bede obtained a degree formally at Cambridge, and John de Beverley at Oxford, and that they were the first doctors of those universities. *Cambridge, Oxford, &c.*

**COLLEGES IN THE UNITED STATES.** The first established was *Harvard*, at Cambridge, Mass., by John Harvard, 1638; and this is now the most important and best endowed in the United States. The second was *William and Mary*, in Virginia, 1693. Third, *Yale*, at New Haven, 1700. Fourth, *College of New Jersey*, Princeton, 1746. Fifth, *Columbia*, New-York, 1754. Sixth, *University of Pennsylvania*, Philadelphia, 1755. Seventh, *Brown University*, Providence, 1764. Eighth, *Dartmouth*, at Hanover, N. H., 1769. Ninth, *Rutgers*, New Brunswick, N. J., 1770. These were all prior to the Revolution. The first medical school was that at Philadelphia, founded 1764. The first law school was founded at Litchfield, Conn., 1782. In 1849 there were 118 colleges in the United States; 42 theological schools; 12 law schools; 36 medical schools. See list in *American Almanac.* *Girard College* opened Jan. 1, 1848.

**COLOGNE.** A member of the Hanseatic league, 1260. The Jews were expelled from here in 1485, and the Protestants in 1618, and it has since fallen into ruin. Cologne was taken by the French, under Jourdan, Oct. 6, 1794. In the cathedral are shown the heads of the three Magi; and in the church of St. Ursula is the tomb of that saint, and bones belonging to the 11,000 virgins said to have been put to death along with her.

**COLOMBIA.** A republic in South America, formed of states which have

declared their independence of the crown of Spain; but its several chiefs have been contending one against another, and each state has been a prey to civil war, and the stability of the union is far from assured.

**COLON.** This point was known to the ancients, but was not expressed as it is in modern times. The colon and period were adopted and explained by Thrasymachus about 373 B. C.—*Suidas*. It was known to Aristotle. Our punctuation appears to have been introduced with the art of printing. The colon and semicolon were both first used in British literature, in the sixteenth century.

**COLONIES OF GREAT BRITAIN.** They are described under the name of each. The white and the free colored population, as far as it has been ascertained, amounts to about 2,500,000, and the slaves at the period of their emancipation, were 770,280. The number of convicts in New South Wales and Van Diemen's Land, is 36,267; the aborigines of the latter place have not been ascertained. The act for the abolition of slavery throughout the British colonies, and for compensation to the owners of slaves (£20,000,000 sterling) was passed 3 & 4 William IV. 1833. By the provisions of this statute all the slaves throughout the British colonies were emancipated on August 1, 1834.

**COLONIZATION.** The American Colonization Society, for colonizing free people of color on the coast of Africa, founded December, 1816, at Washington, chiefly through the exertions of Rev. Robert Finley. [Plan advocated by Jefferson as early as 1777, urged by Dr. Thornton, 1787, and by the legislature of Virginia, 1801.] First president of the society, Bushrod Washington; succeeded by Charles Carroll, James Madison, and Henry Clay. Liberia purchased 1821.

**COLOSSUS OF RHODES.** A brass statue of Apollo, seventy cubits high, erected at the port of Rhodes in honor of the sun, and esteemed one of the wonders of the world. Built by Chares of Lindus, 290 B. C. It was thrown down by an earthquake 224 B. C.; and was finally destroyed by the Saracens on their taking Rhodes in A. D. 672. The figure stood upon two moles, a leg being extended on each side of the harbor, so that a vessel in full sail could enter between. A winding staircase ran to the top, from which could be discerned the shores of Syria, and the ships that sailed on the coast of Egypt. The statue had lain in ruins for nearly nine centuries, and had never been repaired; but now the Saracens pulled it to pieces, and sold the metal, weighing 720,900 lbs., to a Jew, who is said to have loaded 900 camels in transporting it to Alexandria—*Du Fresnoy*.

**COLUMBIA, DISTRICT OF.** A tract of country 10 miles square, ceded by Virginia and Maryland to the United States, for the purpose of forming the seat of government. It included the cities of Washington, Georgetown.

and Alexandria; but in 1843 the latter was re-ceded to Virginia. Population in 1800, 14,093; in 1840, 43,712, including 8,361 free colored persons, and 4,694 slaves.

**COMEDY.** Thalia is the muse of comedy and lyric poetry. Susarion and Dolon were the inventors of theatrical exhibitions, 562 B. C. They performed the first comedy at Athens, on a wagon or movable stage, on four wheels, for which they were rewarded with a basket of figs and a cask of wine.—*Arundelian Marbles*. Aristophanes was called the prince of ancient comedy, 434 B. C., and Menander that of new, 320 B. C. Of Plautus, 20 comedies are extant; he flourished 220 B. C. Statius Cæcilius wrote upwards of 30 comedies; he flourished at Rome, 180 B. C. The comedies of Lælius and Terence were first acted 154 B. C. The first regular comedy was performed in England about A. D. 1551. It was said of Sheridan, that he wrote the best comedy (the *School for Scandal*), the best opera (the *Duenna*), and the best after-piece (the *Critic*), in the English language.—See *Drama*.

**COMETS.** The first that was discovered and described accurately, was by Nicephorus. At the birth of the great Mithridates two large comets appeared, which were seen for seventy-two days together, and whose splendor eclipsed that of the mid-day sun, and occupied forty-five degrees, or the fourth part of the heavens, 135 B. C.—*Justin*. A remarkable one was seen in England, 10 Edward III., 1337.—*Stowe*. These phenomena were first rationally explained by Tycho Brache, about 1577. A comet, which terrified the people from its near approach to the earth, was visible from Nov. 3, 1679, to March 9, 1680. The orbits of comets were proved to be ellipses, by Newton, 1704. A most brilliant comet appeared in 1769, which passed within two millions of miles of the earth. One still more brilliant appeared in Sept., Oct., and Nov., 1811, visible all the autumn to the naked eye. Another brilliant comet appeared in 1823.—See the *three next articles*.

**COMET, BIELA'S.** This comet has been an object of fear to many on account of the nearness with which it has approached, not the earth, but a point of the earth's path: it was first discovered by M. Biela, an Austrian officer, Feb. 28, 1826. It is one of the three comets whose reappearance was predicted, its revolution being performed in six years and thirty-eight weeks. Its second appearance was in 1832, when the time of its perihelion passage was Nov. 27. Its third appearance was in 1839, and its fourth in 1845.

**COMET, ENCKE'S.** First discovered by M. Pons, Nov. 26, 1818, but justly named by astronomers after professor Encke, from his success in detecting its orbit, motions, and perturbations; it is, like the preceding, one of the three comets which have appeared according to prediction, and its revolutions are made in 3 years and 15 weeks.

**COMET, HALLEY'S.** This is the great and celebrated comet of the greatest astronomer of England.—*Lalande*. Doctor Halley first proved that many of the appearances of comets were but the periodical returns of the same bodies, and he demonstrated that the comet of 1682 was the same with the comet of 1456, of 1531, and 1607, deducing this fact from a minute observation of the first mentioned comet, and being struck by its wonderful resemblance to the comets described as having appeared in those years: Halley, therefore, first fixed the identity of comets, and first predicted their periodical returns.—*Vince's Astronomy*. The revolution of Halley's comet is performed in about seventy-six years: it appeared in 1759, and came to its perihelion on March 13; and its last appearance was in 1835.

**COMMERCE.** Flourished in Arabia, Egypt, and among the Phœnicians in the earliest ages. In later times it was spread over Europe by a confederacy of maritime cities A. D. 1241.—See *Hanse Towns*. The discoveries of Columbus and the enterprises of the Dutch and Portuguese, enlarged the

sphere of commerce, and led other nations, particularly England, to engage extensively in its pursuit.—See the various articles connected with this subject.

COMMERCE. See *Navigation*.

COMMERCE, NEW-YORK CHAMBER OF, instituted 1783.

COMMERCIAL TREATIES. The first treaty of commerce made by England with any foreign nation, was entered into with the Flemings, 1 Edward I., 1272. The second was with Portugal and Spain, 2 Edward II. 1308.—*Anderson*. See *Treaties*.

COMMON COUNCIL OF LONDON. Its formation commenced about 1208. The charter of Henry I. mentions the *folk-mote*, this being a Saxon appellation, and which may fairly be rendered the court or assembly of the people.

COMMON LAW OF ENGLAND. Custom, to which length of time has given the force of law, or rules generally received and held as law, called *lex non scripta*, in contradistinction to the written law. Common law derives its origin from Alfred's body of laws (which was lost), A. D. 890. The common law of the United States is founded on that of England.—See *Custom*. *Laws*.

COMMON PRAYER. Published in the English language by the authority of parliament, in 1548. The Common Prayer was voted out of doors, by parliament, and the Directory (*which see*), set up in its room in 1644. A proclamation was issued against it, 1647. See *Directory*.

COMMONS, HOUSE OF. The great representative assembly of the people of Great Britain, and third branch of the Imperial legislature, originated with Simon de Montfort, earl of Leicester, who ordered returns to be made of two knights from every shire, and deputies from certain boroughs, to meet the barons and clergy who were his friends, with a view thereby to strengthen his own power in opposition to that of his sovereign Henry III. This was the first confirmed outline of a house of commons; and the first commons were summoned to meet the king in parliament 42 & 43 Henry III. 1258.—*Goldsmith*. *Slowe*. According to other authorities, the first parliament formally convened was the one summoned 49 Henry III., Jan. 23, 1265; and writs of the latter date are the earliest extant. Some historians date the first regularly constituted parliament from the 22d of Edward I. 1294. The first recorded speaker, duly chosen, was Petre de Montfort in 1260; he was killed at the battle of Evesham, in 1265. The city of London first sent members to parliament in the reign of Henry III., while Westminster was not represented in that assembly until the latter end of Henry VIII's life, or rather in the first House of Commons of Edward VI. The following is the constitution of the House of Commons since the passing of the Reform Bills (*which see*), in 1832:—

|                         |   |         |                                |   |        |

COMMONWEALTH OF ENGLAND. This was the interregnum between the decollation of Charles I. and the restoration of Charles II. The form of the government was changed to a republic on the execution of Charles I. Jan. 30, 1649. Oliver Cromwell was made Protector, Dec. 12, 1653. Richard Cromwell was made Protector, Sept. 1658. Monarchy was restored in the person of Charles II., who returned to London May 29, 1670. See *England*.

COMMONWEALTH OF ROME. See *ROME*. The greatest and most renowned republic of the ancient world. It dates from 509 B. C., when the govern-

ment of kings ceased with the expulsion of Tarquinius Superbus, the seventh and last king of Rome, and the election of consuls. After this revolution Rome advanced by rapid strides towards universal dominion. The whole of Italy received her laws. Sicily, Sardinia, Spain, Carthage, Africa, Greece, Asia, Syria, Egypt, Gaul, Britain, and even a part of Germany, were successively subdued by her arms: so that in the age of Julius Cæsar this republic had the Euphrates, Mount Taurus, and Armenia, for the boundaries in the east; Ethiopia, in the south; the Danube, in the north; and the Atlantic Ocean, in the west. The republic existed under consuls and other magistrates until the battle of Actium, from which we commonly date the commencement of the Roman empire, 31 B. C.

**COMMUNION.** It originated in the Lord's supper, and was practised early in the primitive church. Communicating under the form of bread alone is said to have its rise in the west, under pope Urban II. 1096. The fourth Lateran council decreed that every believer shall receive the communion at least at Easter, 1215. The communion service, as now observed in the church of England, was instituted by the authority of council, 1548.

**COMPANIES.** Among the earliest commercial companies in England may be named the Steel-yard society, established A. D. 1232. The second company was the merchants of St. Thomas à Becket, in 1248.—*Stowe*. The third was the Merchant Adventurers, incorporated by Elizabeth, 1564. There are ninety-one city companies in London; the first twelve are

**COMPANIES, BUBBLE.** Ruinous speculations coming under this name have been formed, commonly by designing persons. Law's Bubble, in 1720-1, was perhaps the most extraordinary of its kind, and the South Sea Bubble, in the same year, was scarcely less memorable for its ruin of thousands of families. Many companies were established in Great Britain in 1824 and 1825, and most of them turned out to be *bubbles*; and owing to the rage for taking shares in each scheme as it was projected, immense losses were incurred by individuals, and the families of thousands of speculators were totally ruined. See *Law's Bubble*, and *Bankrupts*.

**COMPASS, THE MARINER'S.** It is said to have been known to the Chinese, 1115 B. C.; but this seems to be a mistake. They had a machine which self-moved, pointed towards the *south*, and safely guided travellers by land or water; and some authors have mistaken it for the mariner's compass, the invention of which is by some ascribed to Marcus Paulus, a Venetian, A. D. 1260; while others, with more seeming justice, assign it to Flavio Gioja, of Pasitano, a navigator of Naples. Until his time the needle was laid upon a couple of pieces of straw, or small split sticks, in a vessel of water; Gioja introduced the suspension of the needle as we have it now, 1302. Its variation was discovered by Columbus, in 1492. The compass-box and hanging compass used by navigators were invented by William Barlowe, an English divine and natural philosopher, in 1608.—*Biog. Dic.* The measuring compass was invented by Jost Byng, of Hesse, in 1602.

**CONCEPTION OF THE VIRGIN.** This is a feast in the Romish church in honor of the Virgin Mary having been conceived and born immaculate, or without original sin. The festival was appointed to be held on the 8th of Dec. by the church, in 1389. **CONCEPTIONISTS**, an order of nuns, established 1488.

**CONCERT.** The first public subscription concert was performed at Oxford, in 1665, when it was attended by a great number of personages of rank and talent from every part of England. The first concert of like kind performed in London was in 1678. Concerts afterwards became fashionable and frequent.

**CONCHOLOGY.** This branch of natural history is mentioned by Aristotle and Pliny, and was a favorite with the most intellectual and illustrious men. It was first reduced to a system by John Daniel Major of Kiel, who published his classification of the *Testacea* in 1675. Lister's system was published in 1685; and that of Largius in 1722.

**CONCLAVE FOR THE ELECTION OF POPES.** The conclave is a range of small cells in the hall of the Vatican, or palace of the pope at Rome, where the cardinals usually hold their meetings to elect a pope. The word is also used for the assembly, or meeting of the cardinals shut up for the election of a pope. The conclave had its rise in A. D. 1271. Clement IV. being dead at Viterbo in 1268, the cardinals were nearly three years unable to agree in the choice of a successor, and were upon the point of breaking up, when the magistrates, by the advice of St. Bonaventure, then at Viterbo, shut the gates of their city, and locked up the cardinals in the pontifical palace till they agreed. Hence the present custom of shutting up the cardinals while they elect a pope.

**CONCORDANCE TO THE BIBLE.** An index or alphabetical catalogue of all the words in the Bible, and also a chronological account of all the transactions of that sacred volume. The first concordance to the Bible was made under the direction of Hugo de St. Charo, who employed as many as 500 monks upon it, A. D. 1247.—*Abbé Lenglet.*

**CONCORDAT.** The name given to an instrument of agreement between a prince and the pope, usually concerning benefices. The celebrated concordat between Napoleon Bonaparte and Pius VII., whereby the then French consul was made, in effect, the head of the Gallican Church, as all ecclesiastics were to have their appointments from him, was signed at Paris, July 15, 1801. Another concordat between Bonaparte and the same pontiff was signed at Fontainebleau, Jan. 25, 1813.

**CONCUBINES.** They are mentioned as having been allowed to the priests, A. D. 1132. Cujas observes, that although concubinage was beneath marriage, both as to dignity and civil effects, yet concubine was a reputable title, very different from that of mistress among us. This kind of union, which is formed by giving the *left* hand instead of the *right*, and called *half-marriage*, is still in use in some parts of Germany.

**CONFEDERATION AT PARIS.** Upwards of 600,000 citizens formed this memorable confederation, held on the anniversary of the taking of the bastille, at which ceremony the king, the national assembly, the army, and the people, solemnly swore to maintain the new constitution, July 4, 1790. See *Champ de Mars, Bastille.*

**CONFEDERATION OF THE RHINE,** or League of the Germanic States formed under the auspices of Napoleon Bonaparte. By this celebrated league, the minor German princes collectively engaged to raise 258,000 troops to serve in case of war, and they established a diet at Frankfort, July 12, 1806. See *Germanic Confederation.*

**CONFERENCE.** The celebrated religious conference held at Hampton Court palace, between the prelates of the church of England and the dissenting ministers, in order to effect a general union, at the instance of the king, 2 James I. 1604. This conference led to a new translation of the Bible, which

was executed in 1607-11, and is that now in general use in England and the United States; and during the meeting some alterations in the church liturgy were agreed upon, but this not satisfying the dissenters, nothing more was done. A conference of the bishops and presbyterian ministers with the same view was held in 1661.

**CONFESSION.** Auricular confession in the Romish church was first instituted about A. D. 1204, and was regularly enjoined in 1215. It is made to a priest, in order to obtain absolution for the sins or faults acknowledged by the penitent, who performs a penance enjoined by the priest; and if this be done with a contrite heart, the sins thus absolved are supposed to be absolved in heaven. At the reformation, the practice was at first left wholly indifferent, by the council; but this was the prelude to its entire abolition in the church of England.—*Burnet*.

**CONFIRMATION.** One of the oldest rites of the Christian church; it was used by Peter and Paul; and was general, according to some church authorities, in A. D. 190. It is the public profession of the Christian religion by an adult person, who was baptized in infancy. It is still retained in the church of England; but to make it more solemn, it has been advanced into a sacrament by the church of Rome.

**CONGE D'ELIRE.** The license of the king, as head of the church, to chapters, and other bodies, to elect dignitaries, particularly bishops. After the interdict of the pope upon England had been removed in 1214, king John had an arrangement with the clergy for the election of bishops. Bishops were elected by the king's *Conge d'Elire*, 26 Henry VIII., 1535.

**CONGRESS.** An assembly of princes or ministers, or meeting for the settlement of the affairs of nations, or of a people. Several congresses were held during the continental wars; but the following were the most remarkable congresses of Europe:—

|                       |   |               |                                            |   |               |
|-----------------------|---|---------------|--------------------------------------------|---|---------------|
| Congress of Soissons  | - | June 14, 1728 | Congress of Carlsbad                       | - | Aug. 1, 1819  |
| Congress of Antwerp   | - | April 8, 1793 | Congress of Troppau                        | - | Oct. 20, 1820 |
| Congress of Radstadt  | - | Dec. 9, 1797  | Congress of Laybach                        | - | May 6, 1821   |
| Congress of Chatillon | - | Feb. 5, 1814  | Congress of Verona                         | - | Aug. 25, 1822 |
| Congress of Vienna    | - | Nov. 3, 1814  | See <i>Alliances, Conventions, &amp;c.</i> |   |               |

**CONGRESS, U. S. A.** The first *Colonial Congress*, composed of the delegates from nine of the colonies (Mass., R. I., Conn., N. Y., N. J., Pa., Del., Md., S. Ca.), met at N. Y. Dec. 7, 1765.—Tim. Ruggles. Prest. The *Continental Congress* met at Phila. Sep. 5, 1774: again May 10, 1775: adopted Dec. Indep. July 4, 1776; met at Balt. Dec. 20, 1776; at Phila. March 4, 1777; at Lancaster, Pa. Sep. 27, 1777; at York, Pa. Sep. 30, 1777; at Phila. July 2, 1778; at Princeton. June 30, 1783; at Annapolis, Nov. 26, 1783; at Trenton, Nov. 30, 1784; at N. York, Jan. 1785; and that continued to be the place of meeting until the adoption of the constitution, 1789: removed to Phila. 1790: to Washington, 1800.

**CONVENTION, THE,** for forming the Constitution of the U. S. met at Phila. May 10, 1787; in session till Sep. 17, same year.

**CONGREVE ROCKETS.** Invented by general sir William Congreve, in 1803. They were used with great effect in the attack upon Boulogne, in Oct. 1806, when they set a part of the town on fire, which burned for two days; they were employed in various operations in the late war with much success, discharged by a corps called rocket-men.

**CONIC SECTIONS.** Their most remarkable properties were probably known to the Greeks four or five centuries before the Christian era. The study of them was cultivated in the time of Plato 390 B. C. The earliest treatise was written by Aristæus, about 380 B. C. Apollonius's eight books were

written about 240 B. C. The parabola was applied to projectiles by Galileo; the ellipse to the orbit of planets, by Kelper.

**CONJURATION AND WITCHCRAFT.** They were declared to be felony by various statutes, and the most absurd and wicked laws were in force against them in England in former times. See article *Witchcraft*. Conjuraction was felony by statute 1 James I., 1603. This law was repealed 9 George II., 1735; but pretensions to such skill was then made punishable as a misdemeanor.—*English Statutes*.

**CONNECTICUT.** One of the U. States: first settled in 1633, at Windsor, by a colony from Massachusetts. Hartford, settled by the English in 1635, the Dutch having previously built a fort there, which they did not permanently hold. English colony founded at New Haven, 1638. The two colonies of New Haven and Hartford united by a charter of Charles II., in 1655. This charter, when in danger from the tyranny of Andros, was preserved in an oak, near Hartford, since called the Charter Oak. Conn. took an active part in the revolution; a number of its towns, Danbury, N. London, &c., burnt by the British during that struggle. It became one of the original 13 states, adopting the constitution of the Union in 1788, by a vote of 128 to 40. Population 1713, 17,000: 1790, 237,946; 1810, 261,942; 1830, 297,655; 1840, 309,978.

**CONQUEST, THE.** The memorable era in British history, when William duke of Normandy overcame Harold II., at the battle of Hastings, and obtained the crown which had been most unfairly bequeathed to him by Edward the Confessor (for Edgar was the rightful heir) Oct. 15, 1066. William has been erroneously styled the *Conqueror*, for he succeeded to the crown of England by *compact*. He killed Harold, who was himself a usurper, and defeated his army, but a large portion of the kingdom afterwards held out against him, and he, unlike a conqueror, took an oath to observe the laws and customs of the realm, in order to induce the submission of the people. Formerly the judges were accustomed to reprehend any gentleman at the bar who casually gave him the title of William the Conqueror, instead of William I.—*Selden*.

**CONSCRIPT FATHERS.** *Patres conscripti* was the designation given to the Roman senators, and used in speaking of them, in the eras of the republic and the Cæsars: because their names were written in the registers of the senate.

**CONSECRATION.** That of churches was instituted in the second century, the temple of worship being dedicated with pious solemnity to God and a patron saint. The consecration of churches, places of burial, &c., is admitted in the reformed religion. The consecration of bishops was ordained in the latter church in 1549.—*Stowe*.

**CONSISTORY COURT IN ENGLAND.** Anciently the Consistory was joined with the Hundred court, and its original, as divided therefrom, is found in a law of William I. quoted by Lord Coke, 1079. The chief and most ancient Consistory court of the kingdom belongs to the see of Canterbury, and is called the Court of Arches.

**CONSPIRACIES AND INSURRECTIONS IN GREAT BRITAIN.** Among the recorded conspiracies, real or supposed, the following are the most remarkable. They are extracted from *Camden*, *Temple*, *Hume*, and other authorities of note:—

|                                                                          |                                                                                                             |

**CONSTANCE, COUNCIL OF.** The celebrated council of *divines* (!) which condemned the pious martyrs John Huss and Jerome of Prague, to be burnt alive, a sentence executed upon the first on July 6, 1415, and on the other, on May 30, following. Huss had complied with a summons from the council of Constance to defend his opinions before the clergy of all nations in that city, and though the emperor Sigismund had given him a safe-conduct, he was cast into prison. Jerome of Prague hastened to Constance to defend him, but was himself loaded with chains, and in the end shared the fate of his friend. This scandalous violation of public faith, and the cruelty and treachery which attended the punishment of these unhappy disciples of Wickliffe, our great reformer, prove the melancholy truth, that toleration is not the virtue of priests in any form of ecclesiastical government.—*Hume*.

**CONSTANTINA.** The former capital of Numidia. It has become known to Europeans but very recently, they being strangers to it until the French occupation of Algiers. Here was fought a great battle between the French and the Arabs, Oct. 13, 1837, when the former carried the town by assault, but the French general, Doremont, was killed. Achmet Bey retired with 12,000 men as the victors entered Constantina.

**CONSTANTINOPLE.** So called from Constantine the Great, who removed the seat of the Eastern Empire here, A. D. 328. Taken by the western crusaders who put the emperor Mourzoufle to death, first tearing out his eyes, 1204. Retaken by Michael Palæologus, thus restoring the old Greek line, 1261. Conquered by Mahomet II., who slew Constantine Palæologus, the last Christian emperor, and 60,000 of his people, 1453. The city, taken by assault, had held out for fifty-eight days. The unfortunate emperor, on seeing the Turks enter by the breaches, threw himself into the midst of the enemy, and was cut to pieces; the children of the imperial house were massacred by the soldiers, and the women reserved to gratify the lust of the conqueror. This put an end to the Eastern Empire, which had subsisted for 1125 years, and was the foundation of the present empire of Turkey in Europe. See *Eastern Empire* and *Turkey*.

**CONSTANTINOPLE, ERA OF.** This era has the creation placed 5508 years B. C. It was used by the Russians until the time of Peter the Great, and is still used in the Greek church. The civil year begins September 1, and the ecclesiastical year towards the end of March; the day is not exactly determined. To reduce it to our era, subtract 5508 years from January to August, and 5509 from September to the end.

**CONSTELLATIONS.** Those of *Arcturus*, *Orion*, the *Pleiades*, and *Mazzaroth*, are mentioned by Job, about 1520 B. C. Homer and Hesiod notice constellations; but though some mode of grouping the visible stars had obtained in very early ages, our first direct knowledge was derived from Claud. Ptolemæus, about A. D. 140.

**CONSTITUTION OF ENGLAND.** See *Magna Charta*. It comprehends the whole body of laws by which the British people are governed, and to which

it is presumptively held that every individual has assented.—*Lord Somers*. This assemblage of laws is distinguished from the term government, in this respect—that the constitution is the rule by which the sovereign ought to govern at all times: and government is that by which he does govern at any particular time.—*Lord Bolingbroke*. The king of England is not seated on a solitary eminence of power; on the contrary, he sees his *equals* in the co-existing branches of the legislature, and he recognizes his superior in the LAW.—*Sheridan*.

**CONSTITUTION OF THE U. S.** Adopted by the general convention of delegates from all the (then) states, May, 1787. Ratified by the several states at different times. See the respective states.

The 50th anniversary of Washington's inauguration, was celebrated in New York as a jubilee of the constitution, and John Quincy Adams pronounced an oration before the Hist. Soc'y, April 30, 1840.

**CONSTITUTION AND GUERRIERE.** The American frigate Constitution, capt. Hull, after an action of 30 minutes, captured the British frigate Guerriere, capt. Dacres, Aug. 20, 1812. American loss 7 killed, and 7 wounded, British loss 100 killed and wounded. The English attribute the victory to the superior force of the American frigate. As this was the first important naval victory of the U. S., it caused a strong sensation. For others see *Naval Battles*.

**CONSULS.** These officers were appointed at Rome, 509 B. C. They possessed regal authority for the space of a year: Lucius Junius Brutus, and Lucius Tarquinius Collatinus, the latter the injured husband of Lucretia, were the first consuls. A consular government was established in France, November 9, 1799, when Bonaparte, Cambacère, and Lebrun, were made consuls; and subsequently Bonaparte was made first consul for life, May 6, 1802. Commercial agents were first distinguished by the name of consuls in Italy, in 1485.

**CONTRIBUTIONS, VOLUNTARY.** In the two last wars voluntary contributions to a vast amount were several times made by the British people in aid of the government. The most remarkable of these acts of patriotism was that in 1798, when, to support the war against France, the contributions amounted to two millions and a half sterling. Several men of wealth, among others, sir Robert Peel, of Bury, Lancashire, subscribed each 10,000*l.*; and 200,000*l.* were transmitted from India in 1799.

**CONVENTICLES.** These were private assemblies for religious worship, and were particularly applied to those who differed in form and doctrine from the established church. But the term was first applied in England to the schools of Wickliffe. Conventicles, which were very numerous at the time, were prohibited 12 Charles II., 1661.

**CONVENTIONS.** See *Alliances, Treaties, &c.* in their respective places throughout the volume.

**CONVENTS.** They were first founded, according to some authorities, in A. D. 270. The first in England was erected at Folkstone, by Eadbald, in 630.—*Camden*. The first in Scotland was at Coldingham, when Ethelreda took the veil, in 670. They were founded earlier than this last date in Ireland. Convents were suppressed in England in various reigns, particularly in that of Henry VIII., and comparatively few now exist in Great Britain. More than 3000 have been suppressed in Europe within the last few years. The emperor of Russia abolished 187 convents of monks, by a ukase dated July 31, 1832. The king of Prussia followed his example, and secularized all the convents in the duchy of Posen. Don Pedro put down 300 convents in Portugal, in 1834, and Spain has lately abolished 1800 convents.

**CONVICTS.** The first arrival of transported convicts from England, at Botany Bay, was in 1788. Convicts are now sent to Van Diemen's Land, Norfolk Island, Sydney, in New South Wales, &c. See *New South Wales* and *Transportation*.

**COOK'S VOYAGES.** The illustrious captain Cook sailed from England in the *Endeavor*, on his first voyage, July 30, 1768;\* and returned home after having circumnavigated the globe, arriving at Spithead, July 13, 1771. Sir Joseph Banks, afterwards the illustrious president of the Royal Society, accompanied captain Cook on this voyage. Captain Cook again sailed to explore the southern hemisphere, July 1772, and returned in July 1775. In his third expedition this great navigator was killed by the savages of O-why-hee, at 8 o'clock on the morning of February 14, 1779. His ships, the *Resolution* and *Discovery*, arrived home at Sheerness, Sept. 22, 1780.

**COOPERAGE.** This art must be coeval with the dawn of history, and seems to have been early known in every country. The coopers of London were incorporated in 1501.

**COPENHAGEN.** Distinguished as a royal residence, A. D. 1443. In 1728 more than seventy of its streets and 3785 houses were burnt. Its famous palace, valued at four millions sterling, was wholly burnt, Feb. 1794, when 100 persons lost their lives. In a fire which lasted forty-eight hours, the arsenal, admiralty, and fifty streets were destroyed, 1795. Copenhagen was bombarded by the English under lord Nelson and admiral Parker: and in their engagement with a Danish fleet, of twenty-three ships of the line, eighteen were taken or destroyed by the British, April 2, 1801. Again, after a bombardment of three days, the city and the Danish fleet surrendered to admiral Gambier and lord Cathcart, Sept. 7, 1807. The capture consisted of eighteen sail of the line, fifteen frigates, six brigs, and twenty-five gunboats, and immense naval stores.—See *Denmark*.

**COPERNICAN SYSTEM.** The system of the world wherein the sun is supposed to be in the centre, and immovable, and the earth and the rest of the planets to move round it in elliptical orbits. The heavens and stars are here imagined to be at rest, and the diurnal motion, which they seem to have from east to west, is imputed to the earth's motion from west to east. This system was published at Thorn, A. D. 1530; and may in many points be regarded as that of Pythagoras revived.—*Gassendus*.

**COPPER.** It is one of the six primitive metals; its discovery is said to have preceded that of iron. We read in the Scriptures of two vessels of fine copper, precious as gold.—*Ezra* viii. 27. The great divisibility of this metal almost exceeds belief; a grain of it dissolved in alkali, as pearl ashes, soda, &c., will give a sensible color to more than 500,000 times its weight in water; and when copper is in a state of fusion, if the least drop of water touch the melted ore, it will fly about like shot from a gun.—*Boyle*. The mine of Fahlun, in Sweden, is the most surprising artificial excavation in the world. In England, copper-mines were discovered in 1561, and copper now forms an immense branch in the British trade: there are upwards of fifty

---

\* A memorial was presented to the king by the Royal Society in 1768, setting forth the advantages which would be derived to science if an accurate observation of the then approaching transit of Venus over the sun were taken in the South Sea. The ship *Endeavor* was, in consequence, prepared for that purpose, and the command of her given to Lieutenant James Cook. He sailed in July 1768, touched at Madeira and Rio de Janeiro, doubled Cape Horn, and after a prosperous voyage reached Otaheite, the place of destination, in April 1769. By a comparison of the observations made on this transit (June 3, 1769) from the various parts of the globe, on which it was viewed by men of science, the system of the universe has in some particulars, been better understood; the distance of the sun from the earth, as calculated by this and the transit in 1761, is now settled at 168,000,000 miles, instead of the commonly received computation, of 95,000,000.—*Butler*.

mines in Cornwall, where mining has been increasing since the reign of William III.

**COPPER-MONEY.** The Romans, prior to the reign of Servius Tullius, used rude pieces of copper for money.—See *Coin*. In England, copper-money is of extensive coinage. That proposed by sir Robert Cotton was brought into use in 1609. Copper was extensively coined in 1665. It was again coined by the crown, 23 Charles II., 1672. Private traders had made them previously to this act. In Ireland copper was coined as early as 1339; in Scotland in 1406; in France in 1580. Wood's coinage in Ireland (*which see*) commenced in 1723. Penny and two-penny pieces were extensively used, 1797.

**COPPER-PLATE PRINTING.** This species of printing was first attempted in Germany, about A. D. 1450. Rolling-presses for working the plates were invented about 1545. Messrs. Perkins of Philadelphia, invented, in 1819, a mode of engraving on soft steel which, when hardened, will multiply copper-plates and fine impressions indefinitely.—See *Engraving*.

**COPPERAS.** First produced in England by Cornelius de Vos, a merchant, in 1587.

**COPYRIGHT ON BOOKS, &c. IN ENGLAND.** The decree of the Star-chamber regarding it, A. D. 1556. Every book and publication ordered to be licensed, 1585. An ordinance forbidding the printing of any work without the consent of the owner, 1649. Copyright further secured by a statute enacted in 1709. Protection of copyright in prints and engraving, 17 George III., 1777. Copyright protection act, 54 George III., 1814. Dramatic authors' protection act, 3 William IV., 1833. The act for preventing the publication of lectures without consent, 6 William IV., 1835. The act of the 17th George III., extended to Ireland, 7 William IV., 1836. International copyright bill, 1 Victoria, 1838. Copyright of designs for articles of manufacture protected, 2 Victoria, 1839. For important act of 1842, see *Literary Property*.—*Haydn*.

**COPYRIGHT IN UNITED STATES.** The first act for the protection of literary property in the United States passed chiefly through the influence of Noah Webster, the lexicographer, May 31, 1790. Another act in relation to it, April 29, 1802—granting copyright for 14 years, subject to renewal for 14 years if the author is living. Memorial of 56 British authors asking for International Copyright, presented in the Senate by Mr. Clay, Feb. 1, 1837. Act to establish the Smithsonian Institute, requiring that copies of books to secure the copyright must be deposited in there as well as in the library of Congress and office of Sec. State, Aug. 10, 1846.

**COPYRIGHT, PRODUCE OF.** The following sums are stated to have been paid to the authors for the copyright of the works mentioned.

| HISTORY.                                                                                                     |           | POETRY.                                                                       |                |

| Lockhart's Scott (two years' use)                                                                            | 12,500    | Goldsmith's "Vicar" was sold by Dr. Johnson for                               | 1,000 to 1,200 |
| Irving's Columbus (paid by Murray)                                                                           | 4,000     |                                                                               | 63             |
|                                                                                                              |           | Goldsmith received for "Animated Nature"                                      | 800            |
|                                                                                                              |           | Noah Webster is said to have derived \$1000 per annum from his Spelling Book. |                |

**CORDAGE.** The naval cordage in early ages was, probably, merely thongs of leather; and these primitive ropes were retained by the Caledonians in the third century, and by some northern nations in the ninth. Cordage of weed and of horse-hair was also used anciently before that made of hemp. See *Hemp*.

**CORFU.** So celebrated in mythology and poetry, and capital of the island of the same name, was placed under British administration, by the treaty of Paris in Nov. 1815. It is the chief of the Ionian Isles, *which see*.

**CORINTH.** This city was built in 1520 and the kingdom founded by Sisyphus in 1376 B. C. In 146 B. C. the capital was destroyed by the Romans, but was rebuilt by Julius Cæsar; and was among the first cities of Greece that embraced the Christian religion. It was defended by a fortress called Acrocorinth, on a summit of a high mountain, surrounded with strong walls. The situation of this citadel was so advantageous, that Cicero named it the *Eye of Greece*, and declared, that of all the cities known to the Romans, Corinth alone was worthy of being the seat of a great empire.

**CORINTHIAN ORDER.** The finest of all the orders of ancient architecture, aptly called by Scamozzi, the virginal order, as being expressive of the delicacy, tenderness, and beauty of the whole composition. The invention of it is attributed to Callimachus, 540 B. C.

**CORINTHIAN WAR.** The war which received this name, because the battles were mostly fought in the neighborhood of Corinth, was begun B. C. 395, by a confederacy of the Athenians, Thebans, Corinthians, and Argives, against the Lacedæmonians. The most famous battles were at Coronea and Leuctra, *which see*.

**CORN OR GRAIN.** The origin of its cultivation is attributed to Ceres, who having taught the art to the Egyptians, was deified by them, 2409 B. C.—*Arundelian Marbles*. The art of husbandry, and the method of making bread from wheat, and wine from rice, is attributed by the Chinese to Ching Nong, the successor of Fohi, and second monarch of China, 1998 B. C.—*Univ. Hist.* But corn provided a common article of food from the earliest ages of the world, and baking bread was known in the patriarchal ages.—See *Exodus* xii. 15. Wheat was introduced into Britain in the sixth century, by Coll ap Coll Frewi.—*Roberts' Hist. Anc. Britons*. The first importation of corn of which we have note, was in 1347. Bounties were granted on its importation into England, in 1686.

**CORN LAWS IN ENGLAND.** Various enactments relative to the duty on "corn" or grain passed 1814. Riots, caused by the passing of the act permitting its importation when corn should be 80s. "per quarter," 1815. The "sliding-scale" of duties passed July 15, 1828. Another, April 29, 1842; act fixing

the duty on wheat at 4s. until Feb. 1849, and after that at 1s. per quarter, passed June 26, 1846. This was the virtual abolition of the Corn Laws—and the Anti-Corn Law League—which had been formed in 1841 was there fore formally dissolved, July 2, 1846.

**CORONATION.** The first coronation by a bishop, was that of Majocianus, at Constantinople, in A. D. 457. The ceremony of anointing at coronations was introduced into England in 872, and into Scotland in 1097. The coronation of Henry III. took place, in the first instance, without a crown, at Gloucester, October 28, 1216. A plain circle was used on this occasion in lieu of the crown, which had been lost with the other jewels and baggage of king John, in passing the marshes of Lynn, or the Wash, near Wisbeach.—*Matthew Paris. Rymer.*

**CORONATION FEASTS, AND OATH.** The oath was first administered to the kings of England by Dunstan (the archbishop of Canterbury, afterwards canonized), to Ethelred II. in 979. An oath, nearly corresponding with that now in use, was administered in 1377; it was altered in 1689. The fêtes given at coronations commenced with Edward I. in 1273. That at the coronation of George IV. rivalled the extravagances and sumptuousness of former times.

**CORONERS.** They were officers of the realm in A. D. 925. Coroners for every county in England were first appointed by statute of Westminster, 4 Edward I. 1276.—*Stowe.* Coroners were instituted in Scotland in the reign of Malcolm II., about 1004. By an act passed in the 6th and 7th of queen Victoria, coroners are enabled to appoint deputies to act for them, but only in case of illness. Aug. 22, 1843.

**CORONETS.** The caps or inferior crowns, of various forms, that distinguish the rank of the nobility. The coronets for earls were first allowed by Henry III.; for viscounts by Henry VIII.; and for barons by Charles II.—*Baker.* But authorities conflict. Sir Robert Cecil, earl of Salisbury, was the first of the degree of earl who wore a coronet, 1604.—*Beaton.* It is uncertain when the coronets of dukes and marquesses were settled.—*Idem.*

**CORPORATIONS.** They are stated by Livy to have been of very high antiquity among the Romans. They were introduced into other countries from Italy. These political bodies were first planned by Numa, in order to break the force of the two rival factions of Sabines and Romans, by instituting separate societies of every manual trade and profession.—*Plutarch.*

**CORPORATIONS, MUNICIPAL, IN ENGLAND.** Bodies politic, authorized by the king's charter to have a common seal, one head officer, or more, and members, who are able, by their common consent, to grant or receive, in law, any matter within the compass of their charter.—*Cowel.* Corporations were formed by charters of rights granted by the kings of England to various towns, first by Edward the Confessor. Henry I. granted charters, A. D. 1100; and succeeding monarchs gave corporate powers, and extended them to numerous large communities throughout the realm, subject to tests, oaths, and conditions.—*Blackstone.*

**CORSICA.** Called by the Greeks *Cyros*. The ancient inhabitants of this island were savage, and bore the character of robbers, liars, and atheists, according to Seneca, when he existed among them. It was held by the Carthaginians; and was conquered by the Romans, 231 B. C. In modern times, Corsica was dependent upon the republic of Genoa, until 1730; and was sold to France in 1733. It was erected into a kingdom under Theodore, its first and only king, in 1736. He came to England, where he was imprisoned in the King's Bench prison for debt, and for many years subsisted on the benevolence of private friends. Having been released by an act of insolvency

in 1756, he gave in his schedule the kingdom of Corsica as an estate to his creditors, and died the same year, at his lodgings in Chapel-street, Soho. The earl of Oxford wrote the following epitaph, on a tablet erected near his grave, in St. Anne's church, Dean-street:—

“The grave, great teacher! to a level brings  
Heroes and beggars, galley-slaves and kings.  
But Theodore this moral learn'd ere dead;  
Fate pour'd its lesson on his living head,  
Bestow'd a kingdom and denied him bread.”

The celebrated Pascal Paoli was chosen for their general by the Corsicans, in 1753. He was defeated by the count de Vaux, and fled to England, 1769. The people acknowledged George III. of England for their king, June 17, 1794, when sir Gilbert Elliott was made viceroy, and he opened a parliament in 1795. A revolt was suppressed in June 1796; and the island was relinquished by the British, Oct. 22, same year, when the people declared for the French.

**CORTES OF SPAIN.** A deliberative assembly under the old constitution of Spain; several times set aside. The cortes were newly assembled after a long interval of years, Sept. 24, 1810; and they settled the new constitution, March 16, 1812. This constitution was set aside by Ferdinand VII., who banished many members of the assembly in May, 1814. The cortes or states-general were opened by Ferdinand VII. 1820, and they have since been regularly convened.

**CORUNNA, BATTLE OF,** between the British army under sir John Moore (who was killed) and the French, Jan. 16, 1809.

**COSMETICS.** Preparations for improving beauty were known to the ancients, and some authorities refer them even to mythology, and others to the Grecian stage. The Roman ladies painted; and those of Italy excelled in heightening their charms artificially, by juices and colors, and by perfumes. Rouge has always been in disrepute among the virtuous and well-ordered women of England, though some simple *cosmetics* are regarded as innocent, and are in general use.—*Ashe*. The females of France and Germany paint more highly than most other nations.—*Richardson*. A stamp was laid on cosmetics, perfumery, and such medicines as really or suppositiously beautify the skin, or perfume the person, and the venders were obliged to take out licenses, 26th Geo. III. 1786.

**COSMOGRAPHY.** The science which teaches the structure, form, disposition, and relation of the parts of the world, or the manner of representing it on a plane.—*Selden*. It consists of two parts, astronomy and geography: the earliest accounts of the former occur 2234 B. C.—*Blair*. The first record of the latter is from Homer, who describes the shield of Achilles as representing the earth.—*Iliad*. See the articles on *Astronomy* and *Geography* respectively.

**COSSACKS.** The warlike people inhabiting the confines of Poland, Russia, Tartary, and Turkey. They at first lived by plundering the Turkish galleys and the people of Natolia: they were formed into a regular army by Stephen Batori, in 1576, to defend the frontiers of Russia from the incursions of the Tartars. In the late great war of Europe against France, a vast body of Cossacks formed a portion of the Russian armies, and fought almost invincibly.

**COSTUME.** See *Dress*. Accounts of magnificent attire refer to very remote antiquity. The costume of the Grecian and Roman ladies was comely and graceful. The women of Cos, whose country was famous for the silkworm, wore a manufacture of cotton and silk of so beautiful and delicate a texture, and their garments, which were always white, were so clear and thin, that

their bodies could be seen through them.—*Ovid*. As relates to costume worn on the stage, *Æschylus* the Athenian was, it is said, the first who erected a regular stage for his actors, and ordered their dresses to be suited to their characters, about 436 B. C.—*Parian Marbles*.

**COTTON.** The method of spinning cotton formerly was by the hand; but about 1767, Mr. Hargreaves, of Lancashire, invented the spinning-jenny with eight spindles; he also erected the first carding-machine with cylinders. Sir Richard Arkwright obtained a patent for a new invention of machinery in 1769; and another patent for an engine in 1775. Crompton invented the mule, a further and wonderful improvement in the manufacture of cotton, in 1779, and various other improvements have been since made. The names of Peel and Arkwright are eminently conspicuous in connection with this vast source of British industry; and it is calculated that more than one thousand millions sterling have been yielded by it to Great Britain. Cotton manufacturers' utensils were prohibited from being exported in 1774.—*Haydn*.

#### HISTORY OF COTTON, FOR OVER ONE HUNDRED YEARS.

*The following brief items of the history of cotton, from 1730 to 1836, are taken from a South Carolina paper:—*

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1730. Mr. Wyatt spins the first cotton yarn in England by machinery.</p> <p>1735. The Dutch first export cotton from Surinam.</p> <p>1742. First mill for spinning cotton erected at Birmingham, moved by mules or horses; but not successful in its operations.</p> <p>1749. The fly shuttle generally used in England.</p> <p>1756. Cotton velvets and quiltings made in England for the first time.</p> <p>1761. Arkwright obtained the first patent for the spinning frame, which he further improved.</p> <p>1768. The stocking frame applied by Hammond to making of lace.</p> <p>1773. A bill passed to prevent the export of machinery used in cotton factories.</p> <p>1779. Mule spinning invented by Hargrave.</p> <p>1782. First import of raw cotton from Brazil into England.</p> <p>1782. Watt took out his patent for the steam-engine.</p> <p>1783. A bounty granted in England on the export of certain cotton goods.</p> <p>1785. Power-looms invented by Dr. Cartwright—steam engines used in cotton factories.</p> <p>1785. Cotton imported into England from the United States.</p> <p>1786. Bleaching first performed by the agency of the oxymuriatic acid.</p> <p>1787. First machinery to spin cotton put in operation in France.</p> <p>1789. Sea Island cotton first planted in the United States; and upland cotton first cultivated for use and export about this time.</p> <p>1790. Slator, an Englishman, builds the first American cotton factory, at Pawtucket, Rhode Island.</p> <p>1792. Eli Whitney, an American, invents the cotton gin, which he patents.</p> <p>1798. First mill and machinery for cotton erected in Switzerland.</p> <p>1799. Spinning by machinery introduced into Saxony this year.</p> | <p>1803. First cotton factory built in New Hampshire.</p> <p>1805. Power-looms successfully and widely introduced into England.</p> <p>1807. The revolution in Spanish America begins to furnish new markets for cotton manufactures.</p> <p>1810. Digest of cotton manufactures in the United States by Mr. Gallatin, and another by Mr. Tench Coxe, of Philadelphia.</p> <p>1811. Machinery to make bobbin lace patented by John Burn.</p> <p>1813. The India trade more free, and more British manufactures sent thither.</p> <p>1814. The power-loom introduced into the United States; first at Waltham.</p> <p>1818. Average price of cotton 34 cents—higher than since 1810. New method of preparing sewing cotton by Mr. Holt.</p> <p>1819. Extraordinary prices for Alabama cotton lands.</p> <p>1820. Steam power first applied with success extensively to lace manufactures.</p> <p>1822. First cotton factory in Lowell erected.</p> <p>1823. First export of raw cotton from Egypt into Great Britain.</p> <p>1825. In New Orleans cotton at from 23 to 25 cents per pound.</p> <p>1826. Self-acting mule spinner patented in England by Roberts.</p> <p>1827. American cotton manufactures first exported to any considerable extent.</p> <p>1829. Highest duty in the United States on foreign cotton manufactures.</p> <p>1830. About this time Mr. Dyer introduced a machine from the United States into England for the purpose of making cards.</p> <p>1832. Duty on cotton goods imported into the United States reduced; and in England it is forbid to employ minors in cotton mills, to work them more than ten hours per day, or more than nine hours on a Saturday; in consequence they work at something else.</p> <p>1834. Cotton at 17 cents.</p> <p>1835. Extensive purchases made of cotton lands by speculators and others.</p> <p>1836. Cotton at from 18 to 20 cents.</p> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**COTTONIAN LIBRARY.** Formed by great labor and with great judgment by sir Robert Cotton, A. D. 1600 *et seq.* This vast treasury of knowledge, after having been with difficulty rescued from the fury of the republicans during the protectorate, was secured to the public by a statute, 13 William III. 1701. It was removed to Essex-house in 1712; and in 1730 to Dean's-yard, Westminster, where, on Oct. 23, 1731, a part of the books sustained damage by fire. The library was removed to the British Museum in 1753.

**COUNCILS.** An English council is of very early origin. The wise Alfred, to whom we are indebted for many excellent institutions, so arranged the business of the nation, that all resolutions passed through three councils. The first was a select council, to which those only high in the king's confidence were admitted; here were debated all affairs that were to be laid before the second council, which consisted of bishops and nobles, and resembled the present privy council, and none belonged to it but those whom the king was pleased to appoint. The third was a general council or assembly of the nation, called in Saxon, Wittenagemot, to which quality and offices gave a right to sit independent of the king. In these three councils we behold the origin of the cabinet and privy councils, and the antiquity of parliaments; but the term cabinet council is of a much more modern date, according to lord Clarendon.—See *Cabinet Council, Common Council, Privy Council, &c.*

**COUNCILS OF THE CHURCH.** The following are among the most memorable Christian councils, or councils of the Church of Rome. Most other councils (the list of which would make a volume) either respected national churches or ecclesiastical government. *Sir Harris Nicolas* enumerates 1604 councils.

|                                                                                                                                                                         |      |                                                                                                                                                                                                                                      |            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| Of the Apostles at Jerusalem - A. D.                                                                                                                                    | 50   | The second Lateran, tenth General, Innocent II. presided; the preservation of the temporal ties of ecclesiastics, the principal subject, which occasioned the attendance of 1000 fathers of the church -                             | A. D. 1139 |
| Of the western bishops at Arles, in France, to suppress the Donatists; three fathers of the English church went over to attend it -                                     | 314  | The third Lateran, eleventh General; held against schismatics -                                                                                                                                                                      | 1179       |
| The first Œcumenical or General Nicene, held at Nice, Constantine the Great presided; Arius and Eusebius condemned for heresy. This council composed the Nicene Creed - | 325  | Fourth Lateran, twelfth General; 400 bishops and 1000 abbots attended; Innocent III. presided -                                                                                                                                      | 1215       |
| At Tyre, when the doctrine of Athanasius was canvassed -                                                                                                                | 335  | Of Lyons, the thirteenth General, under pope Innocent IV. -                                                                                                                                                                          | 1245       |
| The first held at Constantinople, when the Arian heresy gained ground -                                                                                                 | 337  | Of Lyons, the fourteenth General, under Gregory X. -                                                                                                                                                                                 | 1274       |
| At Rome, concerning Athanasius, which lasted eighteen months -                                                                                                          | 342  | Of Vieme in Dauphiné, the fifteenth General; Clement V. presided, and the kings of France and Arragon attended. The order of the Knight Templars suppressed -                                                                        | 1311       |
| At Sardis; 370 bishops attended -                                                                                                                                       | 347  | Of Pisa, the sixteenth General; Gregory XII. and Benedict XIII. deposed, and Alexander elected -                                                                                                                                     | 1409       |
| Of Rimini; 400 bishops attended, and Constantine obliged them to sign a new confession of faith -                                                                       | 359  | Of Constance, the seventeenth General; Martin V. is elected pope; and John Huss and Jerome of Prague condemned to be burnt -                                                                                                         | 1414       |
| The second General at Constantinople; 350 bishops attended, and pope Damasius presided -                                                                                | 381  | Of Basil, the eighteenth General -                                                                                                                                                                                                   | 1431       |
| The third at Ephesus, when pope Celestine presided -                                                                                                                    | 431  | The fifth Lateran, the nineteenth General, begun by Julius II. -                                                                                                                                                                     | 1512       |
| Fourth at Chalcedon; the emperor Marcian and his empress attended -                                                                                                     | 451  | Continued under Leo X. for the suppression of the Pragmatic sanction of France, against the council of Pisa, &c. till -                                                                                                              | 1517       |
| The fifth at Constantinople, when pope Vigilius presided -                                                                                                              | 553  | Of Trent, the twentieth and last General council, styled Œcumenical, as regarding the affairs of all the Christian world; it was held to condemn the doctrines of the reformers, Luther, Zuinglius, and Calvin.— <i>Abbé Lenglet</i> | 1545       |
| The sixth at Constantinople, when pope Agatho presided -                                                                                                                | 680  |                                                                                                                                                                                                                                      |            |
| Authority of the six general councils re-established by Theodosius -                                                                                                    | 715  |                                                                                                                                                                                                                                      |            |
| The second Nicene council, seventh General; 350 bishops attended -                                                                                                      | 787  |                                                                                                                                                                                                                                      |            |
| Of Constantinople, eighth General; the emperor Basil attended -                                                                                                         | 869  |                                                                                                                                                                                                                                      |            |
| The first Lateran, the ninth General; the right of investitures settled by treaty between pope Calixtus II. and the emperor Henry V. -                                  | 1122 |                                                                                                                                                                                                                                      |            |

COUNCILS, FRENCH REPUBLICAN. The council of ANCIENTS was an assembly of revolutionary France, consisting of 250 members, instituted at Paris, Nov. 1, 1795, together with the council of FIVE HUNDRED; the executive was a Directory of FIVE. Bonaparte dispersed the council of Five Hundred at St. Cloud, Nov 9, 1799, declaring himself, Roger Ducos, and Siéyès, consuls *provisoire*s.—See *France*.

COUNSEL. See *Barristers*. Counsel who were guilty of deceit or collusion were punishable by the statute of Westminster, 13 Edward I., 1284. Counsel were allowed to persons charged with treason, by act 8 William III. 1696. Act to enable persons indicted of felony to make their defence by counsel, 6 & 7 William IV., Aug. 1836.

COUNTIES. The division of England into counties began, it is said, with king Alfred; but some counties bore their present names a century before. The division of Ireland into counties took place in 1562. County courts were instituted in the reign of Alfred, 896. Counties first sent members to parliament, before which period knights met in their own counties, 1259.—See *Commons*, and *Parliament*.

COURIERS or POSTS. Xenophon attributes the first couriers to Cyrus; and Herodotus says that they were common among the Persians. But it does not appear that the Greeks or Romans had regular couriers till the time of Augustus, when they travelled in cars, about 24 b. c. Couriers or posts are said to have been instituted in France by Charlemagne, about A. D. 800. The couriers or posts for letters were established in the early part of the reign of Louis XI. of France, owing to this monarch's extraordinary eagerness for news. They were the first institution of the kind in Europe, A. D. 1463.—*Henault*.

COURTS. Courts of justice were instituted at Athens, 1507 B. C.—See *Areopagita*. There were courts for the distribution of justice in Athens, in 127? B. C.—*Blair*. They existed under various denominations in Rome, and other countries.

COURT OF HONOR. In England, the court of chivalry, of which the lord high constable was a judge, was called *Curia Militaris* in the time of Henry IV., and subsequently the Court of Honor. In the States of Bavaria, in order to prevent duelling, a court of honor was instituted in April, 1819. In these countries, Mr. Joseph Hamilton has ardently labored to establish similar institutions.

COVENANTERS. The name which was particularly applied to those persons who in the reign of Charles I. took the solemn league and covenant, thereby mutually engaging to stand by each other in opposition to the projects of the king; it was entered into in 1638. The covenant or league between England and Scotland, was formed in 1643; it was declared to be illegal by parliament, 14 Charles II., 1662.

COVENTRY, PEEPING TOM OF. The great show fair of Coventry owes its origin to the following tradition:—Leofric, earl of Mercia, had imposed such heavy taxes on the citizens, his lady, Godiva, moved by their entreaties importuned her lord to remit them, and he consented on the condition of her riding naked through the city at mid-day. Her humanity induced her to consent, and she so disposed her flowing tresses as to hide her person; and ordering all the inhabitants, on pain of death, to close their doors and windows, she rode quite naked through the town. One person, yielding to curiosity, stole a glance at the countess, and was struck dead; and has been famed ever since under the name of *Peeping Tom*, and his effigy is shown to this day. To commemorate this event, A. D. 1057, at the great show fair, the mayor and corporation walk in procession through the town, accom-

panied by a female on horseback, clad in a linen dress closely fitted to her limbs.

**COW-POCK INOCULATION.** This species of inoculation, as a security against the small-pox, was introduced by Dr. Jenner, and it became general in 1799. The genuine cow-pox appears in the form of vesicles on the teats of the cow, and was first noticed by Dr. Jenner, in 1796. He was rewarded by parliament with the munificent grant of £10,000, June 2, 1802.—See *Inoculation, Small-Pox, Vaccination*.

**CRACOW.** The Poles elect Cracus for their duke, and he builds Cracow with the spoils taken from the Franks, A. D. 700, *et seq.* Taken by Charles XII. in 1702; taken and retaken by the Russians and confederates on the one side and the patriotic people on the other several times. Kosciusko expelled the Russian garrison from the city, March 24, 1794. It surrendered to the Prussians, June 15, same year. Formed into a republic in 1815. Occupied by 10,000 Russians who followed there the defeated Poles, Sept. 1831. Its independence extinguished; seized by the emperor of Austria, and incorporated with the Austrian empire, November, 1846.—See *Poland*.

**CRANES.** They are of very early date, for the engines of Archimedes may be so called. The theory of the inclined plain, the pulley, &c. are also his, 220 B. C.—*Livy*.

**CRANIOLOGY.** The science of animal propensities. Dr. Gall, a German, started this new doctrine respecting the brain, in 1803. Dr. Spurzheim followed, and by his expositions gave a consistency to the science, and it seems to be rapidly gaining ground; it has now many professors, and in almost all countries craniology is countenanced by learned and enlightened men. The science assigns the particular locations of certain organs, or as many different seats of the most prominent operations of the mind.

**CRANMER, LATIMER, AND RIDLEY.** Illustrious names in the list of English martyrs of the reformed religion. Ridley, bishop of London, and Latimer, bishop of Worcester, were burnt at Oxford, Oct. 16, 1555, and Cranmer, archbishop of Canterbury, March 21, 1556. His love of life had induced Cranmer, some time previously, in an unguarded moment, to sign a paper wherein he condemned the Reformation; and when he was led to the stake, and the fire was kindled round him, he stretched forth his right hand, with which he had signed his recantation, that it might be consumed before the rest of his body, exclaiming from time to time, "This unworthy hand!" Raising his eyes to heaven, he expired with the dying prayer of the first martyr of the Christian church, "Lord Jesus, receive my spirit!"

**CRAPE.** A light kind of stuff like gauze, made of raw silk gummed and twisted on the mill. Its manufacture is of very early date, and it is said some crape was made by St. Badour, when queen of France, about A. D. 680. It was first made at Bologna, and in modern times has been principally used for mourning.

**CRAYONS.** They were known in France before A. D. 1422—improved by L'Oriot, 1748.

**CREATION OF THE WORLD.** It was placed by Usher, Blair, and Dufresnoy, 4004 B. C. Josephus makes it 4658 years.—*Whiston*. The first date agrees with the common Hebrew text, and the vulgate Latin translation of the Old Testament. There are about 140 different dates assigned to the creation: some place it 3616 years before the birth of our Saviour. Plato, in his dialogue entitled *Critias*, asserts his celebrated *Atalantis* to have been buried in the ocean about 9000 years before the age in which he wrote. The Chinese represent the world as having existed some hundreds of thousands of years; and we are told that the astronomical records of the ancient Chal-

deans carried back the origin of society to a period of no less than 473,000 years.

**CREATION, ERA OF THE.** In use by many nations. This era would be found convenient, by doing away with the difficulty and ambiguity of counting before and after any particular date, as is necessary when the era begins at a later period; but, unfortunately, writers are not agreed as to the right time of commencing. This epoch is fixed by the Samaritan Pentateuch at 4700 B. C. The Septuagint makes it 5872. The authors of the Talmud make it 5344; and different chronologers, to the number of 120, make it vary from the Septuagint date to 3268. Dr. Hales fixed it at 5411; but the Catholic church adopted the even number of 4000, and subsequently, a correction as to the birth of Christ adds four years: therefore, it is now generally considered as 4004 years, which agrees with the modern Hebrew text.

**CREED.** The Apostles' Creed is supposed to have been written a great while after their time.—*Pardon.* It was introduced formally into public worship in the Greek church at Antioch, and subsequently into the Roman church. This creed was translated into the Saxon tongue, about A. D. 746. The Nicene Creed takes its name from the council by whom it was composed, in A. D. 325. The Athanasian Creed is supposed to have been written about 340.—See *Apostles', Nicene, and other creeds.*

**CRESSY, OR CRECY, BATTLE OF.** Edward III. and his son, the renowned Edward the Black Prince, obtained a great and memorable victory over Philip, king of France, Aug. 26, 1346. This was one of the most glorious triumphs ever achieved by English arms. John, duke of Bohemia; James, king of Majorca; Ralph, duke of Lorraine (sovereign princes); a number of French nobles, together with 30,000 private men, were slain, while the loss of the English was very small. The crest of the king of Bohemia was three ostrich feathers, with the motto "*Ich Dien,*" in English, "I serve;" and in memory of this victory it has since been adopted by the heirs to the crown of England.—*Froissart, Carte, Hume.*

**CRESTS.** The ancient warriors wore crests to strike terror into their enemies by the sight of the spoils of the animals they had killed. The origin of crests is ascribed to the Carians. In English heraldry, are several representations of Richard I., 1189, with a crest on the helmet resembling a plume of feathers; and after his reign most of the English kings have crowns above their helmets; that of Richard II., 1377, was surmounted by a lion on a cap of dignity. In later reigns, the crest was regularly borne as well on the helmet of the kings, as on the head-trappings of their horses.

**CRETE.** Now Candia, *which see.* This island was once famous for its hundred cities, and for the laws which the wisdom of Minos established about 1015 B. C. Some authors reckon the Labyrinth of Crete as one of the seven wonders of the world. Crete became subject to the Roman empire, 68 B. C. It was conquered by the Saracens, A. D. 808; taken by the Greeks, 961; passed into the hands of the Venetians, 1194; and was taken from them by the Turks, in 1669.—*Priestley.*

**CRIME.** "At the present moment," observes a popular English writer, "one-fifteenth part of the whole population of the United Kingdom is subsisting by the lowest and most degrading prostitution; another fifteenth have no means of support but by robbery, swindling, pickpocketing, and every species of crime; and five-fifteenths of the people are what are denominated poor, living from hand to mouth, and daily sinking into beggary, and, as an almost necessary consequence, into crime." A comparative view of foreign countries with Great Britain demonstrates the effects of poverty and ignorance on the great mass of the population. In North America pauperism is almost unknown, and one fourth of the people are educated; p<sup>2</sup>

meditated murder is alone capital; imprisonment for debt has, in several states, been abolished, and crimes, particularly of enormity, are exceedingly rare. The Dutch, who possess a competency, and are generally educated, are comparatively free from grave offences; and France affords a remarkable illustration in the same way. But in the United Kingdom, the difference is painfully exemplified:—

|                             | Scotland. | England. | Ireland. |
|-----------------------------|-----------|----------|----------|
| Instruction to the people - | 1 in 11   | 1 in 20  | 1 in 35  |
| Criminals among the people  | 1 in 5093 | 1 in 920 | 1 in 468 |

There was recently a revision of the English criminal code, and several acts have been passed calculated to reduce the amount of crime, and mitigate the severity of its punishment. An act for improving the criminal law of England, passed 8 George IV., 1827. An act for consolidating and revising the laws relating to crime, conformably with Mr. Peel's digest, passed 9 George IV., 1828. Hanging criminals in chains was abolished by statute 4 William IV., 1834. See *Executions, Hanging, Trials, &c.*—*Hagdn.*

**CRIMEA.** The ancient *Taurica Chersonesus*. Settled by the Genoese, in 1193. The Genoese were expelled by the Crim Tartars, in 1474. The khans were tributary to the Turks until 1774. The Russians, with a large army, took possession of this country, in 1783; and it was ceded to them the following year; and secured to them in 1791.

**CRISPIN.** The name sometimes given to shoemakers. Crispin and Crispianus were two legendary saints, born at Rome, from whence, it is said, they travelled to Soissons, in France, about A. D. 303, to propagate the Christian religion; and because they would not be chargeable to others for their maintenance, they exercised the trade of shoemakers; but the governor of the town discovering them to be Christians ordered them to be decollated. On this account, the shoemakers, since that period, have made choice of them as their tutelar saints.

**CRITICS.** The first society of them was formed 276 B. C.—*Blair*. Of this class were Varro, Cicero, Appolonius, and many distinguished men. In modern times, the *Journal de Scavans* was the earliest work of the system of periodical criticism, as it is now known. It was originated by Dennis de Sallo, ecclesiastical counsellor in the parliament of France, and was first published at Paris, May 30. 1665, and continued for nearly a century. The first work of this kind in England, was called the *Review* of Daniel Defoe (the term being invented by himself) published in Feb. 1703. The *Waives of Literature* was commenced in 1714, and was discontinued in 1722. The *Monthly Review*, which may be said to have been the third work of this nature in England, was published 1749. The *Critical Review* appeared in 1756; the *Edinburgh Review*, in 1802; and *London Quarterly* in 1809. The *American Review*, established in N. Y. 1799, was the first Review in the U. S. The *North American Review* was established by Wm. Tudor in 1818; the *American Quarterly*, by Robert Walsh, at Phila., 1827; the *New York Review*, by Prof. C. S. Henry, 1835; the *Southern Quarterly*, at Charleston, 1842. See *Periodicals*. The legality of fair criticism was established in the English courts, in Feb 1794, when an action that excited great attention, brought by an author against a reviewer for a severe critique upon his work, was determined in favor of the defendant, on the principle that criticism, however sharp, if just and not malicious, is allowable. See *Reviews, &c.*

**CROCKERY.** In use, and made mention of, as produced by the Egyptians and Greeks, so early as 1390 B. C. The Romans excelled in this kind of ware, many of their domestic articles being of earthen manufacture. Crockery, of a fine kind, in various household utensils, was made at Faenza, in Italy, about A. D. 1310; and it is still called *fayence* in French. See *Earthenware*.

**CROWN.** "The antientest mention of a royal crown is in the holy story of the Amalekites bringing Saul's crown to David."—*Selden*. The first Roman who wore a crown was Tarquin, 616 B. C. The crown was first a fillet tied round the head; afterwards it was formed of leaves and flowers, and also of stuffs adorned with jewels. The royal crown was first worn in England by Alfred, in A. D. 872. The first crown or papal cap was used by pope Damasius II., in 1053; John XIX. first encompassed it with a crown, 1276; Boniface VIII. added a second crown in 1295; and Benedict XII. formed the tiara, or triple crown, about 1334. The pope previously wore a crown with two circles.—*Rainaldi*.

**CRUCIFIXION.** A mode of execution common among the Syrians, Egyptians, Persians, Greeks, Romans, and Jews, and esteemed the most dreadful on account of the shame attached to it: it was usually accompanied by other tortures. Among early accounts may be mentioned, that Ariarathes of Cappadocia, when vanquished by Perdiccas, was discovered among the prisoners; and by the conqueror's orders the unhappy monarch was flayed alive, and then nailed to a cross, with his principal officers, in the eighty-first year of his age, 322 B. C. Crucifixion was ordered to be discontinued by Constantine, A. D. 330.—*Lenglet*. See *Death, Punishment of*.

**CRUSADES, OR HOLY WARS.** (In French, *Croisades*.) Undertaken by the Christian powers to drive the infidels from Jerusalem, and the adjacent countries, called the Holy Land. They were projected by Peter Gautier, called Peter the Hermit, an enthusiast, and French officer of Amiens, who had quitted the military profession and turned pilgrim. Having travelled to the Holy Land, he deplored, on his return, to pope Urban II. that infidels should be in possession of the famous city where the author of Christianity first promulgated his sacred doctrines. Urban convened a Council of 310 bishops at Clermont in France, at which the ambassadors of the chief Christian potentates assisted, and gave Peter the fatal commission to excite all Europe to a general war, A. D. 1094. The first crusade was published; an army of 300,000 men was raised, and Peter had the direction of it, 1095.—*Voltaire*. The holy warriors wore a red cross upon the right shoulders, with the name of Croisés, Crossed, or Crusaders; their motto was *Volonté de Dieu*, "God's will." The epidemical rage for crusading now agitated Europe, and in the end, these unchristian and iniquitous wars against the rights of mankind, cost the lives of 2,000,000 of men.—*Voltaire*.

**CUBA.** Discovered by Columbus on his first voyage, in 1492. It was conquered by Valasquez, in 1511, and settled by the Spaniards. The Buccaneer Morgan took Havana in 1669. See *Buccaneers*. The fort here was erected by admiral Vernon, in 1741. Havana was taken by admiral Pococke and lord Albermarle in 1762, but was restored at the peace, in 1763. Attempt of Lopez and his 400 followers, landing at Cardenas, to stir up a revolution. defeated May, 1850.

**CUBIT.** This was a measure of the ancients, and is the first measure we read of; the ark of Noah was made and measured by cubits.—*Holden*. The Hebrew sacred cubit was two English feet, and the great cubit eleven English feet. Originally it was the distance from the elbow, bending inwards to the extremity of the middle finger.—*Calmet*.

**CUCUMBERS.** They grew formerly in great abundance in Palestine and Egypt, where, it is said, they constituted the greater part of the food of the poor and slaves. This plant is noticed by Virgil, and other ancient poets. It was brought to England from the Netherlands, about 1538.

**CULLODEN, BATTLE OF.** In which the English, under William duke of Cumberland, defeated the Scottish rebels headed by the young Pretender, the last of the Stuarts, near Inverness, April 16, 1746. The Scots lost 2500 men.

in killed upon the field, or in the slaughter which occurred in the pursuit, while the loss of the English did not far exceed 200. The duke's army practised great cruelties upon the vanquished, as well as upon the defenceless inhabitants of the adjacent districts after the battle.—*Smollett*. Immediately after the engagement, Prince Charles sought safety by flight, and continued wandering among the frightful wilds of Scotland for six months, while 30,000*l.* were offered for taking him, and the troops of the conqueror were constantly in search. He at length escaped from the Isle of Uist to Morlaix, and died at Rome, in 1788.

**CURACOA.** In the Caribbean Sea, seized by Holland, in 1634. In 1800, the French having settled on part of this island, and becoming at variance with the Dutch, the latter surrendered the island to a single British frigate. It was restored to the Dutch by the peace of 1802, and taken from them by a British squadron, in 1807, and again restored by the peace of 1814.

**CURFEW BELL.** From the French *couvrir feu*. This was a Norman institution, introduced into England in the reign of William I., A. D. 1068. On the ringing of the curfew at eight o'clock in the evening, all fires and candles were to be extinguished, under a severe penalty.—*Rapin*. The curfew was abolished 1 Hen. I., A. D. 1100.

**CURRENTS.** They were brought from Zante, and the tree planted in England 1533. The hawthorn currant-tree (*Ribes oxyacanthoides*) came from Canada in 1705.

**CUSTOM.** This is a law, not written, but established by long usage and consent. By lawyers and civilians it is defined *lex non scripta*, and it stands opposed to *lex scripta*, or the written law. It is the rule of law when it is derived from A. D. 1189, downwards. Sixty years is binding in civil law, and forty years in ecclesiastical cases.

**CUSTOMS.** They were collected upon merchandise in England, under Ethelred II., in 979. The king's claim to them by grant of parliament was established 3 Edward I., 1274. The customs were farmed to Mr. Thomas Smith, for 20,000*l.* for several years, in the reign of Elizabeth.—*Stowe*. They were farmed by Charles II. for 390,000*l.* in the year 1666.—*Davenant*.

|                          |   |   |           |                          |   |            |
|--------------------------|---|---|-----------|--------------------------|---|------------|
| In 1530 they amounted to | - | - | £14,000   | In 1748 they amounted to | - | £2,000,000 |
| In 1592 ditto            | - | - | 50,000    | In 1808 ditto            | - | 9,973,240  |
| In 1614 ditto            | - | - | 148,000   | In 1823 ditto            | - | 11,498,762 |

| In 1642 ditto            | - | - | 500,000   | In 1835 ditto            | - | 18,612,906 |
| In 1720 ditto            | - | - | 1,555,600 | In 1840 ditto            | - | 19,915,296 |

The customs in Ireland were, in the year 1224, viz., on every sack of wool, 3*d.*; on every last of hides, 6*d.*; and 2*d.* on every barrel of wine.—*Annals of Dublin*. Custom-house officers, and officers of excise, were disqualified from voting for the election of members of parliament, by statute 22 George III., 1782. See *Revenue*.

**CUSTOMS (DUTIES) IN THE UNITED STATES.** The amounts collected were, in

|         |   |             |      |   |              |      |   |              |

See *Tariff*.

**CYCLE.** That of the sun is the twenty-eight years before the days of the week return to the same days of the month. That of the moon is nineteen lunar years and seven intercalary months, or nineteen solar years. The cycle of Jupiter is sixty years, or sexagenary. The Paschal cycle, or the time of keeping Easter, was first calculated for the period of 532 years, by Victorius, A. D. 463.—*Blair*.

CYCLOPÆDIA.—See *Encyclopædia*.

CYMBAL. The oldest musical instrument of which we have certain record. It was made of brass, like a kettle drum, and some think in the same form, but smaller. Xenophon makes mention of the cymbal as a musical instrument, whose invention is attributed to Cybele, by whom, we are told, it was used in her feasts, called the mysteries of Cybele, about 1580 B. C. The festivals of Cybele were introduced by Scamander, with the dances of Corybantes, at Mount Ida, 1546 B. C.

CYNICS. The sect of philosophers founded by Antisthenes, 396 B. C.—*Diog. Laert.* He lived in the ninety-fourth Olympiad.—*Pardon.* These philosophers valued themselves for contemning all worldly things, and even all sciences, except morality; they were very free in reprehending vice, and did all their actions publicly, and practised the greatest obscenities without blushing.—*Idem.* Diogenes was one of this sect. They generally slept on the ground.—*Diog. Laert.*

CYPRUS. An island, whose inhabitants anciently were much given to love and pleasure.—*Pliny.* It was divided among several petty kings till the time of Cyrus, who subdued them; it ranked among the proconsular provinces in the reign of Augustus. Conquered by the Saracens, A. D. 648; but recovered by the Romans, in 957. Cyprus was reduced by Richard I. of England, in 1191. Taken by the Turks from the Venetians, in 1570.—*Priestley.*

CYRENAIC SECT. Aristippus the Elder, of Cyrene, was the founder of the Cyrenaici, 392 B. C. They maintained the doctrine that the supreme good of man in this life is pleasure, and particularly pleasure of a sensual kind; and said that virtue ought to be commended because it gave pleasure, and only so far as it conduced thereto. The sect flourished for several ages.—*Laer. Ar. Cicero.*

CYRENE. Founded by Battus, 630 B. C. Aristæus, who was the chief of the colonists here, gave the city his mother's name. It was also called Pentapolis, on account of its five towns, namely, Cyrene, Ptolemais, Berenice, Apollonia, and Arsinoe. Cyrene was left by Ptolemy Apion to the Romans, 97 B. C. It is now a desert.—*Priestley.*

CZAR, From Cæsar, a title of honor assumed by the sovereigns of Russia. Ivan Basilowitz, after having achieved great triumphs over the Tartars, and made many conquests, pursued them to the centre of their own country, and returning in triumph, took the title of Tzar, or Czar (signifying Great King).—*Aspin's Chron.* The courts of Europe consented to address the Russian Czar by the title of Emperor in 1722.—*Idem.*

## D.

DAGUERRETYPE. The name given to a process invented by M. Daguerre of Paris, in 1839, by which perfect fac-similes of objects are transferred upon thin copper plates, plated with silver. The images are produced by the action of light upon the iodine, through the focus of the camera obscura. An apparatus somewhat kindred in design, was in contemplation about the same time by M. Niepçé, and about 5 years previously by Henry Fox Talbot of London: the original idea, however, is traceable as far back as the days of Roger Bacon. By means of the Talbotype, a recent improvement upon the above process, pictures in colors are produced both on paper and plates. So important a discovery in the fine arts, was the Daguerreotype deemed by the French government, that it awarded to its inventor a life pension of 6000 francs.

**DAMASCUS.** This city was in being in the time of Abraham.—*Gen.* xiv. It is, consequently, one of the most ancient in the world. From the Assyrians, Damascus passed to the Persians, and from them to the Greeks under Alexander; and afterwards to the Romans, about 70 B. C. It was taken by the Saracens, A. D. 633; by the Turks in 1006; and was destroyed by Tamerlane in 1400. It was in a journey to this place that the apostle Paul was miraculously converted to the Christian faith, and here he began to preach the gospel, about A. D. 50. Damascus is now the capital of a Turkish pachalic.

**DAMASK LINENS AND SILKS.** They were first manufactured at Damascus, and hence the name, their large fine figures representing flowers, and being raised above the groundwork. They were beautifully imitated by the Dutch and Flemish weavers; and the manufacture was brought to England by artisans who fled from the persecution of the cruel duke of Alva, between the years 1571 and 1573.—*Anderson.*

**DAMON AND PYTHIAS.** Pythagorean philosophers. When Damon was condemned to death by the tyrant Dionysius of Syracuse, he obtained leave to go and settle some domestic affairs, on a promise of returning at the appointed time of execution, and Pythias being surety for the performance of his engagement. When the fatal hour approached, Damon had not appeared, and Pythias surrendered himself, and was led away to execution; but at this critical moment Damon returned to redeem his pledge. Dionysius was so struck with the fidelity of these friends, that he remitted the sentence, and entreated them to permit him to share their friendship, 387 B. C.

**DANCING.** The dance to the measure of time was invented by the Curetes, 1534 B. C.—*Eusebius.* The Greeks were the first who united the dance to their tragedies and comedies. Pantomimic dances were first introduced on the Roman stage, 22 B. C.—*Usher.* Dancing by cinque paces was introduced into England from Italy A. D. 1541. In modern times, the French were the first who introduced *ballets analogues* in their musical dramas. The country dance (*contre-danse*) is of French origin, but its date is not precisely known.—*Spelman.*

**DANES, INVASIONS OF THE.** The invasions of this people were a scourge to England for upwards of two hundred years. During their attacks upon Britain and Ireland, they made a descent on France, where, in 895, under Rollo, they received presents under the walls of Paris. They returned and ravaged the French territories as far as Ostend in 896. They attacked Italy in 903. Neustria was granted by the king of France to Rollo and his Normans (Northmen), hence Normandy, in 912.

**DANTZIC.** A commercial city in A. D. 997.—*Busching.* It was built, according to other authorities, by Waldemar I. in 1169. Seized by the king of Prussia, and annexed to his dominions in 1793. It surrendered to the French after a siege of four months, May 5, 1807; and by the treaty of Tilsit, it was restored to its former independence, under the protection of Prussia and Saxony. Dantzic was besieged by the allies in 1812; and after a gallant resistance, surrendered to them Jan. 1, 1814. By the treaty of Paris it again reverted to the king of Prussia. Awful inundation here, owing to the Vistula breaking through its dykes, by which 10,000 head of cattle and 4,000 houses were destroyed, and a vast number of lives lost, April 9, 1829.

**DARDANELLES, PASSAGE OF THE.** The Dardanelles are two castles, one called Sestos, seated in Romania, the other called Abydos, in Natolia, commanding the entrance of the strait of Gallipoli. They were built by the emperor Mahomet IV., in 1659, and were named Dardanelles from the contiguous town of Dardanus. The gallant exploit of forcing the passage of the Dar-

danelles was achieved by the British squadron under admiral sir John Duckworth, Feb. 19, 1807; but the admiral was obliged to repossess them, which he did with great loss and immense damage to the fleet, March 2, following, the castles of Sestos and Abydos hurling down rocks of stone, each of many tons weight, upon the decks of the British ships.

**DAUPHIN.** The title given to the eldest sons of the kings of France, from the province of Dauphiné, which was ceded by its last prince, Humbert II. to Philip of Valois, on the condition that the heirs of the French throne should bear the arms and name of the province, A. D. 1343.—*Priestley*.

**DAVIS'S STRAIT.** Discovered by the English navigator, John Davis, whose name it bears, on his voyage to find a North-west passage, in 1585.

**DAY.** Day began at sunrise among most of the northern nations, and at sunset among the Athenians and Jews. Among the Romans day commenced at midnight, as it now does among us. The Italians in most places, at the present time, reckon the day from sunset to sunset, making their clocks strike twenty-four hours round, instead of dividing the day, as is done in all other countries, into equal portions of twelve hours. This mode is but partially used in the larger towns of Italy, most public clocks in Florence, Rome, and Milan, being set to the hour designated on French or English clocks. The Chinese divide the day into twelve parts of two hours each. Our civil day is distinguished from the astronomical day, which begins at noon, and is the mode of reckoning used in the Nautical Almanac. At Rome, day and night were first divided in time by means of water-clocks, the invention of Scipio Nasica, 168 B. C.—*Vossius de Scien. Math.*

**DEACON.** An order of the Christian priesthood, which took its rise from the institution of seven deacons by the Apostles, which number was retained a long period in many churches, about A. D. 51. See *Acts*, chap. vi. The original deacons were Philip, Stephen, Prochorus, Nicanor, Timon, Parmenios, and Nicolas. The qualifications of a deacon are mentioned by St. Paul, 1st *Timothy* iii. 8–13.

**DEAF AND DUMB.** The first systematic attempt to instruct the deaf and dumb was made by Pedro de Ponce, a Benedictine monk of Spain, about A. D. 1570. Bonet, who was also a monk, published a system at Madrid, in 1620. Dr. Wallis published a work in England on the subject, in 1650. The first regular academy for the deaf and dumb in Great Britain was opened in Edinburgh in 1773.

**DEAF AND DUMB, BLIND, AND INSANE PERSONS, IN THE UNITED STATES.** In 1840 there were 6,916 blind persons, or 1 in 2,467 of the population; 7,659 deaf and dumb, or 1 in 2,228; 17,434 insane and idiotic, or 1 in 979. There were in the United States 23 asylums for the insane, with about 2,840 patients.

Among the most prominent and successful of the philanthropists who have promoted the education and good treatment of the above persons in the United States, are Dr. Amariah Brigham, of Hartford; Dr. S. G. Howe, of Boston; Rev. T. H. Gallaudet, Hartford.

**DEATH, PUNISHMENT OF.** Death by drowning in a quagmire was a punishment among the Britons before 450 B. C.—*Stowe*. The most eulogized heroes of antiquity inflicted death by crucifixion, and even women suffered on the cross, the victims sometimes living in the most excruciating torture many days. A most horrifying instance of death by torture occurs in the fate of Mithridates, an assassin of Xerxes. See a *note* to the article *Persia*; see also *Ravillac*; *Boiling to Death*; *Burning to Death*, &c. Maurice, the son of a nobleman, was hanged, drawn, and quartered for piracy, the first execution in that manner in England, 25 Henry III., 1241. The punishment

of death was abolished in a great number of cases by Mr. Peel's acts, 1824-9, in other cases 1832, for forgery 1837. Capital punishment, except in cases of martial law, abolished by Prussia, and by German parliament, at Frankfurt, same day, August 4, 1848.

**DECEMBER.** In the year of Romulus this was the tenth month of the year, called so from *decem*, ten, the Romans commencing their year in March. Numa introduced January and February before the latter month, in 713 B. C., and from thenceforward December became the twelfth of the year.

**DECEMVIRI.** Ten magistrates, who were chosen annually at Rome to govern the commonwealth instead of consuls; first instituted 450 B. C.—*Livy*. The decemviral power became odious on account of their tyranny, and the attempt of Appius Claudius to defile Virginia, and the office was abolished, the people demanding from the senate to burn the decemviri alive. Consuls were again appointed, and tranquillity restored.—See *Virginia*.

**DEEDS.** They were formerly written in the Latin and French languages: the earliest known instance of the English tongue having been used in deeds, is that of the indenture between the abbot and convent of Whitby, and Robert, the son of John Bustard, dated at York, in the year 1343. The English tongue was ordered to be used in all law pleadings in 1364. Ordered to be used in all law-suits in May, 1731.

**DEFENDER OF THE FAITH.** *Fidei Defensor*. A title conferred by Leo X. on Henry VIII. of England. The king wrote a tract in behalf of the Church of Rome, then accounted *Domicilium fidei Catholicae*, and against Luther, who had just begun the Reformation in Germany, upon which the pope gave him the title of Defender of the Faith, a title still retained by the monarchs of Great Britain: the bull conferring it bears date Oct. 9, 1521.

**DEGREES.** The first attempt to determine the length of a degree is recorded as having been made, by Eratosthenes, about 250 B. C.—*Snellius*. The first degree of longitude was fixed by Hipparchus of Nice (by whom the latitude was determined also), at Ferro, one of the Canary islands, whose most western point was made the first general meridian, 162 B. C. Several nations have fixed their meridian from places connected with their own territories; and thus the English compute their longitude from the meridian of Greenwich. See *Latitude, Longitude, and the various Collegiate degrees*.

**DEISM.** This denomination was first assumed about the middle of the sixteenth century by some gentlemen of France and Italy, in order thus to disguise their opposition to Christianity by a more honorable appellation than that of Atheism.—*Virot's Instruction Chrétienne*, 1563. Deism is a rejection of all manner of revelation: its followers go merely by the light of nature, believing that there is a God, a providence, vice and virtue, and an after state of punishments and rewards: it is sometimes called free-thinking. The first deistical writer of any note in England, was Herbert, baron of Cherbury, in 1624. The most distinguished deists were Hobbes, Tindal, Morgan, lord Bolingbroke, Humè, Holcroft, and Godwin.

**DELAWARE.** The smallest of the U. States except R. Island. First settled in 1630, by the Swedes and Fins under the patronage of Gustavus Adolphus and received the name of New Sweden. They were subdued in 1655 by the Dutch, who in turn surrendered it, with New Netherlands, to the English in 1664, and then named Delaware. The duke of York granted it to Wm. Penn, in 1682, and it remained nominally united to Pennsylvania until 1775. This state bore an honorable part in the revolution, and suffered much in the struggle. She adopted the Constitution of the U. S. by a unanimous

vote in convention, Dec. 3, 1787. Population,— 1790, 59,094; 1840, 78,085; including 2,605 slaves.

**DELHI.** The once great capital of the Mogul empire: it is now in decay, but contained a million of inhabitants, in 1700. In 1738, when Nadir Shah invaded Hindoostan, he entered Delhi, and dreadful massacres and famine followed: 100,000 of the inhabitants perished by the sword; and plunder to the amount of 62,000,000*l.* sterling was said to be collected.

**DELPHI.** Celebrated for its oracles delivered by Pythia, in the temple of Apollo, which was built, some say, by the council of the Amphictyons, 1263 B. C. The priestess delivered the answer of the god to such as came to consult the oracle, and was supposed to be suddenly inspired. The temple was burnt by the Pisistratidæ, 548 B. C. A new temple was raised by the Alcæonidæ, and was so rich in donations that at one time it was plundered by the people of Phocis of 20,000 talents of gold and silver; and Nero carried from it 500 costly statues. The first Delphic, or sacred war, concerning the temple was 449 B. C. The second sacred war was commenced (A. D.) Delphi being attacked by the Phocians, 356 B. C.—*Du Fresnoy*.

**DELUGE, THE GENERAL.** The deluge was threatened in the year of the world 1536; and it began Dec. 7, 1656, and continued 377 days. The ark rested on Mount Ararat, May 6, 1657; and Noah left the ark, Dec. 18, following. The year corresponds with that of 2348 B. C.—*Blair*. The following are the epochs of the deluge, according to the table of Dr. Hales.

|                  |      |                 |      |                  |      |                  |      |
|------------------|------|-----------------|------|------------------|------|------------------|------|
| Septuagint B. C. | 3246 | Persian - B. C. | 3103 | Playfair - B. C. | 2352 | Petavius - B. C. | 2329 |
| Jackson          | 3170 | Hindoo -        | 3102 | Usher -          | 2348 | Strauchius -     | 2293 |
| Hales -          | 3155 | Samaritan -     | 2998 | English Bible    | 2348 | Hebrew -         | 2288 |
| Josephus -       | 3146 | Howard -        | 2698 | Marsham -        | 2344 | Vulgar Jewish    | 2104 |

Some of the states of Europe were alarmed, we are told, by the prediction (!) that another general deluge would occur, and arks were every where built to guard against the calamity; but the season happened to be a very fine dry one, A. D. 1524.

**DELUGE OF DEUCALION.** The fabulous one, is placed 1503 B. C. according to *Eusebius*. This flood has been often confounded by the ancients with the general flood: but it was 845 years posterior to that event, and was merely a local inundation, occasioned by the overflowing of the river Pineus, whose course was stopped by an earthquake between the Mounts Olympus and Ossa. Deucalion, who then reigned in Thessaly, with his wife Pyrrha, and some of their subjects, saved themselves by climbing up Mount Parnæus.

**DELUGE OF OGYGES.** In the reign of Ogyges was a deluge which so inundated the territories of Attica that they lay waste for near 200 years; it occurred before the deluge of Deucalion, about 1764 B. C.—*Blair*. Buffon thinks that the Hebrew and Grecian deluges were the same, and arose from the Atlantic and Bosphorus bursting into the valley of the Mediterranean.

**DEMERARA AND ESSEQUIBO.** These colonies, founded by the Dutch, were taken by the British, 1796, but were restored at the peace of 1802. Demarara and Essequibo again surrendered to the British under general Grinfield, and commodore Hood, Sept. 20, 1803. They are now fixed English colonies.

**DENMARK.** The most ancient inhabitants of this kingdom were the Cimbræ and the Teutones, who were driven out by the Jutes or Goths. The Teutones settled in Germany and Gaul; the Cimbræ invaded Italy, where they were defeated by Marius. The peninsula of Jutland obtains its name from the Jutes; and the general name of Denmark is supposed to be derived from *Dan*, the founder of the Danish monarchy, and *mark*, a German word signifying country, *i. e.* Dan-mark, the country of Dan.

DENMARK, *continued.*

- Reign of Sciold, first king - B. C. 60  
 The Danish chronicles mention 18 kings  
 to the time of Ragnor Lodbrog - A. D. 750  
 [Ragnor is killed in an attempt to in-  
 vade England, and for more than 200  
 years from this time the Danes were  
 a terror to the northern nations of Eu-  
 rope, and at length conquering all  
 England. See *Danes*.]

 Accession of Christian I., from whom  
 the present royal family springs - 1448  
 Christian II. is deposed, and the inde-  
 pendence of Sweden acknowledged - 1523  
 Lutheranism established by Christian  
 III. - 1536  
 Danish East India Company established  
 by Christian IV. - 1612  
 Christian IV. chosen head of the Pro-  
 testant league - 1629  
 Charles Gustavus of Sweden invades  
 Denmark, besieges Copenhagen, and  
 makes large conquests - 1658  
 The crown made hereditary and abso-  
 lute - 1660  
 Frederick IV. takes Holstein, Sleswick,  
 Tonningen, and Stralsund; reduces  
 Weismar, and drives the Swedes out  
 of Norway - 1716 *et seq.*  
 Copenhagen destroyed by a fire which  
 consumes 1650 houses, 5 churches, the  
 university, and 4 colleges - 1728  
 The peaceful reign of Christian VI.,  
 who promotes the happiness of his  
 subjects - 1730  
 Christian VII. in a fit of jealousy sud-  
 denly confines his queen, Caroline  
 Matilda, sister of George III. who is  
 afterwards banished. See *Zell* Jan. 18, 1772  
 The counts Struensee and Brandt are  
 seized at the same time, on the charge  
 of a criminal intercourse with the  
 queen; and the former confessing to  
 avoid the torture, both are beheaded  
 for high treason - April 28, 1772  
 The queen Caroline Matilda dies at  
 Zell - May 10, 1775  
 Christian VII. becomes deranged, and  
 prince Frederick is appointed regent 1784  
 One-fourth of Copenhagen is destroyed  
 by fire - June 9, 1795  
 Admirals Nelson and Parker bombard  
 Copenhagen, and engage the Danish  
 fleet, taking or destroying 18 ships of  
 the line, of whose crews 1800 are kill-  
 ed. The Confederacy of the North  
 (see *Armed Neutrality*) is thus dis-  
 solved - April 2, 1801  
 Admiral Gambier and Lord Cathcart  
 bombard Copenhagen, and seize the  
 Danish fleet of 12 ships of the line, 15  
 frigates, and 37 brigs, &c. - Sept. 7, 1807

 April 10; but driven out of Schleswig  
 April 23, 1848  
 Truce agreed upon (provisional govern-  
 ment of 5 to rule the duchies mean-  
 while) - July 10, 1848  
 Armistice till March 1, 1849, signed Aug. 1848  
 (See *Copenhagen*.)

## KINGS OF DENMARK.

- A. D. 714 Gormo I.  
 750 Ragnor Lodbrog.  
 770 Sigefrid.  
 801 Godefrid.  
 809 Olaus I.  
 811 Hemming.  
 812 Siward and Ringon, killed in a sea-fight.  
 814 Harold and Regner; the latter made  
 prisoner in Ireland, and died in a  
 dungeon there.  
 849 Siward II. deposed.  
 856 Eric; killed in battle.  
 858 Eric II.  
 873 Canute I.  
 915 Frothon.  
 920 Gormo II.  
 925 Harold.  
 928 Hardicanute.  
 930 Gormo III.  
 935 Harold III.  
 980 Suenon.  
 1014 Canute II. the Great.  
 1036 Hardicanute II.  
 1041 Magnus I.  
 1048 Suenon II.  
 1079 Harold IV.  
 1080 Canute III. assassinated.  
 1086 Olaus II.  
 1097 Eric III.  
 1106 Nicholas, killed in Sleswick.  
 1135 Eric IV., killed at Ripen.  
 1138 Eric V.  
 1147 Suenon III., beheaded by Waldemar  
 for assassinating prince Canute.  
 1157 Waldemar the Great.  
 1182 Canute V.  
 1202 Waldemar II.  
 1240 Eric VI.  
 1250 Abel I., killed in an expedition against  
 the Frisons.  
 1252 Christopher I., poisoned by the bishop  
 of Arhus.

DENIS, St. An ancient town of France, six miles from Paris to the northward, the last stage on the road from England to that capital,—famous for its abbey and church, the former abolished at the Revolution; the latter desecrated at the same epoch, after having been the appointed place of sepulture to the French kings, from its foundation by Dagobert, in 613.

“DEVIL AND DR. FAUSTUS.” Faustus, one of the earliest printers, had the policy to conceal his art, and to this policy we are indebted for the tradition of “The Devil and Dr. Faustus.” Faustus associated with John of Güttemberg; their types were cut in wood, and fixed, not movable, as at present. Having printed off numbers of copies of the Bible, to imitate those which were commonly sold in MS., he undertook the sale of them at Paris, where printing was then unknown. As he sold his copies for sixty crowns, while the scribes demanded five hundred, he created universal astonishment; but when he produced copies as fast as they were wanted, and lowered the price to thirty crowns, all Paris was agitated. The uniformity of the copies increased the wonder; informations were given to the police against him as a magician, and his lodgings being searched, and a great number of copies being found, they were seized. The red ink with which they were embellished was supposed to be his blood, and it was seriously adjudged that he was in league with the devil; and if he had not fled, he would have shared the fate of those whom superstitious judges condemned in those days for witchcraft, A. D. 1460. *Nouv. Dict.* See *Printing*.

DIADEM. The band or fillet worn by the ancients instead of the crown, and which was consecrated to the gods. At first, this fillet was made of silk or wool, and set with precious stones, and was tied round the temples and forehead, the two ends being knotted behind, and let fall on the neck. Aurelian was the first Roman emperor who wore a diadem, A. D. 272.—*Tillemont*.

DIALS. Invented by Anaximander, 550 B. C.—*Pliny*. The first dial of the sun seen at Rome, was placed on the temple of Quirinus by L. Papirius Cursor, when time was divided into hours, 293 B. C.—*Blair*. In the times of the emperors almost every palace and public building had a sun-dial. They were first set up in churches in A. D. 613.—*Lenglet*.

DIAMONDS. They were first brought to Europe from the East, where the mine of Sumbulpour was the first known; and where the mines of Golconda were discovered in 1584. This district may be termed the realm of diamonds. The mines of Brazil were discovered in 1728. From these last a diamond, weighing 1680 carats, or fourteen ounces, was sent to the court of Portugal, and was valued by M. Romeo de l'Isle at the extravagant sum of 224 millions; by others it was valued at fifty-six millions: its value was next stated to be three millions and a half; but its true value is 400,000*l*. The diamond called the “mountain of light,” which belonged to the king of Cabul, was the most superb gem ever seen; it was of the finest water, and the size of

an egg, and was also valued at three millions and a half. The great diamond of the emperor of Russia weighs 193 carats, or 1 oz. 12 dwt. 4 gr., troy. The empress Catharine II. offered for it 104,166*l.* besides an annuity for life, to the owner, of 104*l.* which was refused; but it was afterwards sold to Catharine's favorite, count Orloff, for the first mentioned sum, without the annuity, and was by him presented to the empress on her birthday, 1772; it is now in the sceptre of Russia. The Pitt diamond weighed 136 carats, and after cutting 106 carats; it was sold to the king of France for 125,000*l.* in 1720.

**DIANA, TEMPLE OF, AT EPHEBUS.** One of the seven wonders of the world, built at the common charge of all the Asiatic States. The chief architect was Ctesiphon; and Pliny says that 220 years were employed in completing this temple, whose riches were immense. It was 425 feet long, 225 broad, and was supported by 127 columns, (60 feet high, each weighing 150 tons of Parian marble,) furnished by so many kings. It was set on fire on the night of Alexander's nativity, by an obscure individual named Eratostratus, who confessed on the rack, that the sole motive which had prompted him to destroy so magnificent an edifice, was the desire of transmitting his name to future ages, 356 B. C. The temple was rebuilt, and again burned by the Goths, in their naval invasion, A. D. 256. *Univ. Hist.*

**DICTATORS.** These were supreme and absolute magistrates of Rome, instituted 498 B. C., when Titus Larcus Flavius, the first dictator, was appointed. This office, respectable and illustrious in the first ages of the Republic, became odious by the perpetual usurpations of Sylla and J. Cæsar; and after the death of the latter, the Roman senate, on the motion of the consul Antony, passed a decree, which for ever forbade a dictator to exist in Rome, 44 B. C.

**DICTIONARY.** A standard dictionary of the Chinese language, containing about 40,000 characters, most of them hieroglyphic, or rude representations somewhat like our signs of the zodiac, was perfected by Pa-out-she, who lived about 1100 B. C.—*Morrison*. Cyclopædies were compiled in the fifteenth and sixteenth centuries. The first dictionary of celebrity, perhaps the first, is by Ambrose Calepini, a Venetian friar, in Latin; he wrote one in eight languages, about A. D. 1500.—*Nicéron*. The *Lexicon Heptaglotton* was published by Edmund Castell, in 1659. Bayle's dictionary was published in 1696, "the first work of the kind in which a man may learn to think."—*Voltaire*. Chambers' Cyclopædia, the first dictionary of the circle of the arts, sciences, &c., was published in 1728. The great dictionary of the English language, by Samuel Johnson, appeared in 1755. Francis Grose's Dictionary of the Vulgar Tongue, was compiled in 1768; and from this period numerous dictionaries have been added to our store of literature. Noah Webster's great American Dictionary of the English language, in two quarto volumes, was first published at New Haven in 1828. It was reprinted in London, under the supervision of E. H. Barker, 1832. Numerous abridgments and a new edition of the whole work have since been published. See *Encyclopædia*.

**DICT OF THE GERMAN EMPIRE.** The supreme authority of this empire may be said to have existed in the assemblage of princes under this name. The diet, as composed of three colleges, viz.:—the college of electors, the college of princes, and the college of imperial towns, commenced with the famous edict of Charles IV. 1356.—See *Golden Bull*. Diets otherwise constituted had long previously been held on important occasions. The diet of Wurtzburg, which proscribed Henry the Lion, was held in 1179. The celebrated diet of Worms, at which Luther assisted in person, was held in 1521. That of Spire, to condemn the Reformers, was held in 1529;

and the famous diet of Augsburg, in 1530. In the league of the German princes, called the confederation of the Rhine, they fixed the diet at Frankfort, July 12, 1806. A new diet at Frankfort, for the purpose of consolidating the government of the German States, 1848. See *Germany*.

**DIEU ET MON DROIT**, "God and my right." This was the parole of the day, given by Richard I. of England, to his army at the battle of Gisors, in France. In this battle (*which see*) the French army was signally defeated; and in remembrance of this victory, Richard made "*Dieu et mon droit*" the motto of the royal arms of England, and it has ever since been retained, A. D. 1198.—*Rymer's Fœdera*.

**DIGEST**. The first collection of Roman laws under this title was prepared by Alfrenus Varus, the civilian of Cremona, 66 B. C.—*Quintil. Inst. Orat.* Other digests of Roman laws followed. The Digest, so called by way of eminence, was the collection of laws made by order of the emperor Justinian: it made the first part of the Roman law, and the first volume of the civil law. Quotations from it are marked with a ff.—*Pardon*.

**DIOCESE**. The first division of the Roman empire into dioceses, which were at that period civil governments, is ascribed to Constantine, A. D. 323; but Strabo remarks that the Romans had the departments called dioceses long before.—*Strabo*, lib. xiii. In England these circuits of the bishops' jurisdiction are coeval with Christianity; there are twenty-four dioceses, of which twenty-one are suffragan to Canterbury, and three to York.

**DIOCLETIAN ERA**. Called also the era of Martyrs, was used by Christian writers until the introduction of the Christian era in the sixth century, and is still employed by the Abyssinians and Copts. It dates from the day on which Diocletian was proclaimed emperor at Chalcedon, 29th August, 284. It is called the era of martyrs, on account of the persecution of the Christians in the reign of Diocletian.

**DIORAMA**. This species of exhibition, which had long previously been an object of wonder and delight at Paris, was first opened in London, Sept. 29, 1823. The diorama differs from the panorama in this respect, that, instead of a circular view of the objects represented, it exhibits the whole picture at once in perspective, and it is decidedly superior both to the panorama and the cosmorama in the fidelity with which the objects are depicted, and in the completeness of the illusion.

**DIPLOMACY OF THE UNITED STATES**. List of ministers plenipotentiary to Great Britain and France.

| GREAT BRITAIN.                             |            | FRANCE.                                      |       |

| 1849 Abbott Lawrence, do.                  | do.        | 1849 W. C. Rives, Va.                        | do.   |

**DIRECTORY, THE CHURCH.** The book so called was published in England at the period of the civil war. It was drawn up at the instance of the parliament, by an assembly of divines at Westminster, with the object that the ministers might not be wholly at a loss in their devotions after the suppression of the Book of Common Prayer. There were some general hints given, which were to be managed at discretion, for the Directory prescribed no form of prayer, nor manner of external worship, nor enjoined the people to make any responses, except *Amen*. The Directory was established by an ordinance of the parliament in 1644.—*Bishop Taylor*.

**DIRECTORY, FRENCH.** The French Directory was installed at the little Luxembourg, at Paris, under a new constitution of the government, November 1, 1795, and held the executive power four years. It was composed of five members, and ruled in connection with two chambers, the Council of Ancients and Council of Five Hundred, *which see*. Deposed by Bonaparte, who, with Cambacérès and Siéyès, became the ruling power of France, the three governing as consuls, the first as chief, Nov. 9, 1799.

**DISSENTERS.** The "Dissenters" from the Church of England arose early in the Reformation, contending for a more complete departure from the Romish models of church government and discipline. They were reproached with the name of Puritans, on account of the purity they proposed in religious worship and conduct; and the rigorous treatment they endured under Elizabeth and James I. led multitudes of them to emigrate to this country in those reigns. The first place of worship for Dissenters in England was established at Wandsworth, near London, Nov. 20, 1572; and now, in London alone, the number of chapels, meeting-houses, &c., for all classes of Dissenters, amounts to near 200. The great act for the relief of Dissenters from civil and religious disabilities, was the statute passed 9 George IV. c. 17. By this act, called the Corporation and Test Repeal Act, so much of the several acts of parliament of the preceding reigns as imposed the necessity of receiving the sacrament of the Lord's Supper as a qualification for certain offices, &c. was repealed, May 9, 1828. Several other acts of ameliorating effect have been since passed.

**DIVINATION.** In the Scriptures we find mention made of different kinds of divination; and it is mentioned by most of the ancient authors. It was retained in the hands of the priests and priestesses, the magi, soothsayers, augurs, and other like professors, till the coming of Christ, when the doctrines of Christianity and the spirit of philosophy banished such visionary opinions. The oracles of Delphi began 1263 B. C. Augurs were instituted by Numa at Rome, 710 B. C. See *Augury*, *Witchcraft*, &c.

**DIVING-BELL.** First mentioned, though obscurely, by Aristotle, 325, B. C. The diving-bell was first used in Europe, A. D. 1509. It is said to have been used on the coast of Mull, in searching for the wreck of part of the Spanish Armada, before A. D. 1669. Halley greatly improved this machine, and was, it is said, the first who, by means of a diving-bell, set his foot on dry ground at the bottom of the sea. Smeaton applied the condensing-pump to force down air. Mr. Spalding and his assistants going down in a diving-bell in Ireland, were drowned, June 1, 1783. The *Royal George* man-of-war, which was sunk off Portsmouth in 1782, was first surveyed by means of a diving-bell, in May 1817. Lately, and particularly in 1840, it has been employed in sub-marine surveys. The first diving-belle was the wife of Captain Morris, at Plymouth, who descended in one a few years ago.

**DIVORCES FOR ADULTERY.** Of the earliest institution, both in ecclesiastical and civil law, among the ancients. First put in practice by Spurius Carvilius at Rome, 231 B. C.—*Blair*. At this time morals were so debased, that 3000 prosecutions for adultery were enrolled. Divorces were attempted

to be made of more easy obtainment in England, in A. D. 1539. The bill to prevent women marrying their seducers was brought into parliament in 1801.

**DOCKS OF LONDON.** They are said to be the most extensive and finest constructions of the kind, for the purposes of commerce, in the world. In London there are a number of these docks, of which the following are the principal:—The West India docks, the act for whose formation passed in July 1799; they were commenced February 3, 1800, and were opened Aug. 27, 1802, when the *Henry Addington* West Indiaman first entered them, decorated with the colors of the different nations of Europe. The London docks were commenced June 26, 1802, and were opened January 31, 1805. The East India docks were commenced under an act passed July 27, 1803, and were opened August 4, 1806. The first stone of the St. Katherine docks was laid May 3, 1827; and 2,500 men were daily employed upon them until they were opened, Oct. 25, 1828.

**DOCTOR.** This rank was known in the earliest times. Doctor of the church was a title given to SS. Athanasius, Basil, Gregory Nazianzen, and Chrysostom, in the Greek church; and to SS. Jerome, Augustin, and Gregory the Great, in the Romish church, A. D. 373, *et seq.* Doctor of the law was a title of honor among the Jews. The degree of doctor was conferred in England, 8 John, 1207.—*Spelman*. Some give it an earlier date, referring it to the time of the Venerable Bede and John de Beverley, the former of whom, it is said, was the first that obtained the degree at Cambridge, about A. D. 725. See *Collegiate Degrees*.

**DOCTORS' COMMONS.** The college for the professors of civil and canon law residing in the city of London; the name of Commons is given to this college from the civilians communing together as in other colleges. Doctors' Commons was founded by Dr. Henry Harvey, whose original college was destroyed in the great fire of 1666, but after some years it was rebuilt on the old site. The causes taken cognizance of here are, blasphemy, divorces, bastardy, adultery, penance, tithes, mortuaries, probate of wills, &c. See article *Civil Law*.

**DOG.** The *chien de berger*, or the shepherd's dog, is the origin of the whole race.—*Buffon*. Buffon describes this dog as being "the root of the tree," assigning as his reason that it possesses from nature the greatest share of instinct. The Irish wolf-dog is supposed to be the earliest dog known in Europe, if Irish writers be correct. Dr. Gall mentions that a dog was taken from Vienna to England; that it escaped to Dover, got on board a vessel, landed at Calais, and after accompanying a gentleman to Mentz, returned to Vienna.

**DOG-DAYS.** The canicular or dog-days, commence on the 3d of July, and end on the 11th of August. Common opinion has been accustomed to regard the rising and setting of Sirius, or the dog-star,\* with the sun, as the cause of excessive heat, and of consequent calamities, instead of its being viewed as the sign when such effects might be expected. The star not only varies in its rising, in every one year as the latitude varies, but is always later and later every year in all latitudes, so that in time the star may, by the same rule, come to be charged with bringing frost and snow.—*Dr. Hutton*.

**DOGE.** The title of the duke of Venice, which state was first governed by a

---

\* Mathematicians assert that Sirius, or the Dog Star, is the nearest to us of all the fixed stars; and they compute its distance from our earth at 2,200,000 millions of miles. They maintain that a sound would not reach our earth from Sirius in 50,000 years, and that a cannon-ball, flying with its usual velocity of 480 miles an hour, would consume 523,211 years in its passage thence to our globe.

prince so named, Anafesto Paululio, A. D. 697. The Genoese revolted against their count, and chose a doge from among their nobility, and became an aristocratic republic, 1030-4. The ceremony of the doge of Venice marrying the sea, "the Adriatic wedded to our duke," was instituted in 1173, and was observed annually on Ascension-day, until 1797, when the custom was dispensed with. See *Adriatic*.

**DOMINGO, ST.** Discovered by Columbus in his second voyage, in 1493. The city was founded in 1494. The town of Port-au-Prince was burnt down, and nearly destroyed by the revolted negroes, in Oct., Nov., and Dec., 1791. Toussaint L'Ouverture governed the island, on the expulsion of the French colonists, after this till 1802, when he was entrapped by Bonaparte, and died in prison. His successor, Dessalines, recommended the blacks, by proclamation, to make a general massacre of the whites, which was accordingly executed with horrid cruelty, and 2500 were butchered in one day, March 29, 1804. Dessalines proclaimed himself emperor, Oct. 8, 1804. See *Hayti*, in which article particulars will be found up to the independence of St. Domingo, acknowledged by France, in April, 1825.

**DOMINICA.** Discovered by Columbus in his second voyage, in 1493. This island was taken by the British in 1761, and was confirmed to them by the peace of 1763. The French took Dominica in 1778, but restored it at the subsequent peace in 1783. It suffered great damage by a tremendous hurricane in 1806; and several devastating hurricanes have more recently occurred.

**DOMINICAL LETTER.** Noting the Lord's day, or Sunday. The seven days of the week, reckoned as beginning on the 1st of January, are designated as by the first seven letters of the alphabet, A, B, C, D, E, F, G; and the one of these which denotes Sunday is the Dominical letter. If the year begin on Sunday, A is the dominical letter; if it begin on Monday, that letter is G; if on Tuesday, it is F, and so on. Generally to find the dominical letter call New Year's day A, the next day B, and go on thus till you come to the first Sunday, and the letter that answers to it is the dominical letter; in leap years count two letters.

**DOMINICANS.** A religious order whose power and influence were almost universal. They were called in France Jacobins, and in England Blackfriars, and were founded by St. Dominick, approved by Innocent III. in 1215; and the order was confirmed by a bull of Honorius III. in 1216, under St. Austin's rules, and the founder's particular constitutions. In 1276 the corporation of London gave them two whole streets by the river Thames, where they erected a large and elegant convent, and whence that part is still called Blackfriars.

**DOOM'S-DAY OR DOME'S-DAY BOOK.** *Liber Judiciarius vel Censualis Anglia.* A book of the general survey of England, commenced in the reign of William I. A. D. 1080. The intent of this book was, to be a register whereby to determine the right in the tenure of estates; and from this book the question whether lands be ancient demesne or not, is sometimes still decided. The book is still preserved in the Exchequer, fair and legible, consisting of two volumes, a greater and lesser, wherein all the counties of England, except Northumberland and Durham, are surveyed. It was finished in A. D. 1086, having been completed by five justices. "This dome's-day book was the tax-book of king William."—*Camden*. The taxes were levied according to this survey till 13 Henry VIII. 1522, when a more accurate survey was taken, and was called by the people the new Doom's-day book.

**DORIC ORDER OF ARCHITECTURE.** The most ancient of the five, the invention of the Dorians, a people of Greece. The Dorians also gave the name to

the Doric muse. The migration of this people to the Peloponnesus took place 1104 B. C. They sent, in their vast spirit of enterprise, many colonies into different places, which afterwards bore the same name as their native country.

**DORI.** Here happened an awful inundation of the sea, A. D. 1446. It arose in the breaking down of the dykes; and in the territory of Dordrecht 10,000 persons were overwhelmed and perished; and more than 100,000 round Dullart, in Friesland and in Zealand. In the last two provinces upwards of 300 villages were overflowed, and the tops of their towers and steeples were for ages after to be seen rising out of the water. Dort is famous for the Protestant synod held in 1618; a general assembly, to which deputies were sent from England, and from all the Reformed churches in Europe, to settle the differences between the doctrines of Luther, Calvin, and Arminius, principally upon points of justification and grace. The synod condemned the tenets of Arminius.—*Aitzema.*

**DOUAY, IN FRANCE.** Erected into a university by Philip II. of Spain, who founded here the celebrated college of Roman Catholics, A. D. 1569. Douay was taken from the Spaniards by Louis XIV. in person, in 1667. It was taken by the duke of Marlborough, in 1710; and retaken by the French next year. This town gives its name to the Catholic edition of the Bible, which continues in almost universal use by the consent of the successive popes among the members of that communion, as the only English version authorized by Catholics; its text being copiously explained by the notes of Catholic divines.

**DRACO, LAWS OF.** Draco, when he exercised the office of archon, made a code of laws, which, on account of their severity, were said to be written in letters of blood: by them idleness was punished with as much severity as murder; the smallest transgression, he said, deserved death, and he could not find any punishment more rigorous for more atrocious crimes, 623 B. C.—*Sigonius de Repub. Athen.*

**DRAKE'S CIRCUMNAVIGATION.** Sir Francis Drake sailed from Plymouth, No. 13, 1577, and sailing round the globe, returned to England, after many perilous adventures, Nov. 3, 1580. This illustrious seaman was vice-admiral under lord Howard, high-admiral of England, in the memorable conflict with the Spanish Armada, July 19, 1588. His expeditions and victories over the Spaniards have been equalled by modern admirals, but not his generosity; for he divided the booty he took in proportional shares with the common sailors, even to wedges of gold given him in return for his presents to Indian chiefs.—*Stowe. Rapin.*

**DRAMA.** We owe both forms of composition, tragedy and comedy, to the Greeks. The first comedy was performed at Athens, by Susarion and Dolon, on a movable scaffold, 562 B. C. See *Comedy*. The chorus was introduced 556 B. C. See *Chorus*. Tragedy was first represented at Athens, by Thespis, on a wagon, 536 B. C. *Arund. Marb.* Thespis of Icaria, the inventor of tragedy, performed at Athens *Alcestis*, this year, and was rewarded with a goat, 536 B. C.—*Pliny*. Anaxandrides was the first dramatic poet who introduced intrigues and rapes upon the stage. He composed about a hundred plays, of which ten obtained the prize; he died 340 B. C.

**DRAMA IN ROME.** The drama was first introduced into Rome on occasion of a plague which raged during the consulate of C. Sulpicius Peticus and C. Lucinius Stolo. The magistrates to appease the incensed deities instituted the games called *Scenici*, which were amusements entirely new. Actors from Etruria danced, after the Tuscan manner, to the flute 364 B. C. Subsequently came satires accompanied with music set to the flute; and

afterwards plays were represented by Livius Andronicus, who, abandoning satires, wrote plays with a regular and connected plot, 240 B. C.—*Livy*. Andronicus was the first person who gave singing and dancing to two different performers; he danced himself, and gave the singing to a younger exhibitor.—*Livy*.

**DRAMA, MODERN.** The modern drama arose early in the rude attempts of minstrels and buffoons at fairs in France, Italy, and England.—*Warton*. Stories from the Bible were represented by the priests, and were the origin of sacred comedy.—*Idem*. Gregory Nazianzen, an early father of the church, is said to have constructed a drama about A. D. 364, on the Passion of Christ, to counteract the profanities of the heathen stage, and thus to have laid the foundation of the modern romantic drama; but this is not clearly proved. Fitzstephen, in his *Life of Thomas à Becket*, asserts that "London had for its theatrical exhibitions holy plays, and the representation of miracles wrought by holy confessors." The Chester Mysteries were performed about 1270. Plays were performed at Clerkenwell by the parish clerks in 1397, and miracles were represented in the fields. Allegorical characters were introduced in the reign of Henry VI. Individual characters were introduced in Henry VII.'s reign. The first regular drama acted in Europe was the "Sophonisba" of Trissino, at Rome, in the presence of pope Leo X., 1515.—*Voltaire*. The English drama became perfect in the reign of Elizabeth. The first royal license for the drama in England was to master Burbage, and four others, servants to the earl of Leicester, to act plays at the Globe, Bankside, 1574. A license was granted to Shakspeare, and his associates, in 1603. Plays were opposed by the Puritans in 1633, and were afterwards suspended until the Restoration in 1660. Two companies of regular performers were licensed by Charles II., Killgrew's and Davenant's, in 1662. Till this time boys performed women's parts.

**DRESDEN, BATTLE OF,** between the allied army under the prince of Schwarzenberg, and the French army commanded by Napoleon, Aug. 26 and 27, 1813. The allies, who were 200,000 strong, attacked Napoleon in his position at Dresden, and the event had nearly proved fatal to them, but for an error in the conduct of general Vandamme. They were defeated with dreadful loss, and were obliged to retreat into Bohemia; but Vandamme pursuing them too far, his division was cut to pieces, and himself and all his staff made prisoners. In this battle general Moreau received his mortal wound while in conversation with the emperor of Russia.

**DRESS.** Excess in dress was restrained by a law in England, in the reign of Edward IV., 1465. And again in the reign of Elizabeth, 1574.—*Stowe*. Sir Walter Raleigh, we are told, wore a white satin-pinked vest, close sleeved to the wrist, and over the body a brown doublet finely flowered, and embroidered with pearls. In the feather of his hat, a large ruby and pearl drop at the bottom of the sprig, in place of a button. His breeches, with his stockings and ribbon garters, fringed at the end, all white; and buff shoes, which on great court days, were so gorgeously covered with precious stones, as to have exceeded the value of 6600*l*.; and he had a suit of armor of solid silver, with sword and belt blazing with diamonds, rubies, and pearls. King James's favorite, the duke of Buckingham, could afford to have his diamonds tacked so loosely on, that when he chose to shake a few off on the ground, he obtained all the fame he desired from the pickers-up, who were generally *les Dames de la Cour*.

**DROWNING PERSONS.** Societies for the recovery of drowning persons were first instituted in Holland, A. D. 1767. The second society is said to have been formed at Milan, in 1768; the third in Hamburg, in 1771; the fourth at Paris, in 1772; and the fifth in London, in 1774. Similar societies

have been instituted in other countries. The motto of the Royal Humane Society in England is very appropriate:—*Lateat scintillula forsan*—a small spark may lurk unseen.

**DRUIDS.** A celebrated order among the ancient Germans, Gauls, and Britons, who from their veneration for the oak (Dryas) were so called. They acted as priests and magistrates; one of them was invested occasionally with supreme authority. In England they were chosen out of the best families, that the dignity of their station, added to that of their birth, might procure them the greater respect. They were versed in sciences; had the administration of all sacred things; were the interpreters of the gods; and supreme judges in all causes. The Druids headed the Britons who opposed Cæsar's first landing, 55 B. C. They were cruelly put to death, defending the freedom of their country against the Roman governor, Suetonius Paulinus, who totally destroyed every mark of Druidism, A. D. 59.—*Rowland's Mona Antiqua*.

**DRUNKARDS.** The phrase "Drunk as a lord," arose out of an older proverb, "Drunk as a beggar;" and we are told that it was altered owing to the vice of drunkenness prevailing more among the great of late years. Drunkenness was punished in many of the early nations with exemplary severity. In England, a canon law restrained it in the clergy so early as A. D. 747. Constantine, king of Scots, punished this offence against society with death. He used to say, that a drunkard was but the mimic of a man, and differed from the beast only in shape, A. D. 870. Drunkenness was restrained in the commonalty in England in 975; and by several later laws.

**DUBLIN.** This city, anciently called Ascheled, built A. D. 140.

**DUCAT.** First coined by Longinus, governor of Italy.—*Procopius*. First struck in the duchy of Apulia.—*Du Cange*. Coined by Robert, king of Sicily, in A. D. 1240. The ducat is so called because struck by dukes.—*Johnson*. It is of silver and gold, the value of the first being 4s. 6d., and that of the gold 9s. 6d.—*Pardon*.

**DUELLING AND KNIGHT-ERRANTRY,** took their rise from the judicial combats of the Celtic nations. The first duel in England, not of this character, took place A. D. 1096. Duelling in civil matters was forbidden in France, 1305. The present practice of duelling arose in the challenge of Francis I. to the emperor Charles V., 1527. The fight with small swords was introduced into England, 29 Elizabeth 1587. Proclamation that no person should be pardoned who killed another in a duel, 30 Charles II., 1679. Duelling was checked in the army, 1792.—See *Battle, Wager of; Combat, &c.* As many as 227 official and memorable duels were fought during my grand climacteric.—*Sir J. Barrington*. A single writer enumerates 172 duels, in which 63 individuals were killed and 96 wounded: in three of these cases both the combatants were killed, and 18 of the survivors suffered the sentence of the law.—*Hamilton*.

**DUKE,** originally a Roman dignity, first given to the generals of armies. In England, during Saxon times, the commanders of armies were called dukes, *duces*.—*Camden*. The title lay dormant from the Conquest till the reign of Edward III., who conferred the title on his eldest son, Edward the Black Prince, by the style of duke of Cornwall, A. D. 1336. Robert de Vere was created marquis of Dublin and duke of Ireland, 9 Richard II., 1385. The first duke created in Scotland was by king Robert III., who created David, prince of Scotland, duke of Rothsay, a title which afterwards belonged to the king's eldest son, A. D. 1398.

**DUKE, GRAND.** The Medici family was one of extraordinary greatness and immense wealth. Of this family, Alexander de Medicis was acknowledged

the chief of the republic of Tuscany in 1531; he was stabbed in the night; and his son, Cosmo, was created grand duke, the first of that rank, by pope Pius V. in 1569.

**DUNBAR, BATTLE OF**, between the Scottish and English armies, in which John Balliol was defeated by the earl of Warrenne, and Scotland subdued, by Edward I., fought April 27, 1296. Battle between the Scots and English under Cromwell, who obtained a signal victory, September 3, 1650.

**DUNKIRK**. This town was taken from the Spaniards by the English and French, and put into the hands of the English, June 24, 1658, the last year of Cromwell's administration. It was sold by Charles II. for 500,000*l.* to Louis XIV., in 1662. The French king made Dunkirk one of the best fortified ports in the kingdom; but all the works were demolished, and the basins filled up, in consequence of the treaty of Utrecht, in 1713.

**DUNSINANE, BATTLE OF**. Celebrated in dramatic story by the immortal Shakspeare. On the hill of Dunsinane was fought the renowned battle between Macbeth, the thane of Glamis, and Seward, earl of Northumberland. Edward the Confessor had sent Seward on behalf of Malcolm III., whose father, Duncan, the thane and usurper had murdered. Macbeth, who was signally defeated, fled, and was pursued, it is said, to Lumphanan, in Aberdeenshire, and there slain, 1057. The history of Macbeth is the subject of Shakspeare's incomparable drama.

**DURHAM, BATTLE OF**, between the English and Scottish armies, fought at Nevill's-cross, near Durham. The former army was commanded by queen Philippa and lord Piercy, and the latter by David Bruce, king of Scotland, who was vanquished. Fifteen thousand of Bruce's soldiers were cut to pieces, and himself, with many of his nobles and knights, and many thousand men, were taken prisoners, Oct. 17, 1346.

**DYEING, ART OF**. The discovery of it attributed to the Tyrians. In dyeing and dipping their own cloths, the English were so little skilled, that their manufactures were usually sent white to Holland, and returned to England for sale. The art of dyeing woollens was brought from the Low Countries in 1608. "Two dyers of Exeter were flogged for teaching their art *in the north*" (of England) 1628.

## E.

**EAGLE**. The standard of the eagle was first borne by the Persians; and the Romans carried figures of the eagle, as ensigns, in silver and gold, and sometimes represented with a thunderbolt in its talons, on the point of a spear; they adopted the eagle in the consulate of Marius, 102 B. C. When Charlemagne became master of the whole of the German empire, he added the second head to the eagle for his arms, to denote that the empires of Rome and Germany were united in him, A. D. 802. The eagle was the imperial standard of Napoleon; and is that of Austria, Russia, and Prussia. It is also the national emblem of the United States of America.

**EARL**. An honor which came from the Saxons, and continued for many ages the highest rank in England, until Edward III. created dukes, and Richard II. created marquesses, both having precedence assigned above earls. They had, anciently, for the support of their state, the third penny out of the sheriff's court, issuing out of the pleas of the shire whereof they had their title, as in ancient times there were no counts or earls but had a county or shire for his earldom. Upon the increase of earls their revenue ceased, and their powers were abridged. Alfred used the title of earl as a substitute for king.

**EARTH.** The globular form of the earth was first suggested by Thales of Miletus about 640 B. C. Its magnitude was calculated from measuring an arc of the meridian by Eratosthenes, 240 B. C. The Greeks taught the sphericity of the earth, and the popes believed it to be a plane, and gave all towards the west to the kings of Spain. The first ship that sailed round the earth, and thence demonstrated that its form was globular, was Magellan's, in 1519. The notion of its magnetism was started by Gilbert in 1576. The experiments of M. Richer, in 1672, led Newton to prove the earth to be in the shape of an oblate spheroid. The variation of its axis was discovered by Dr. Bradley in 1737. See *Globe*.

**EARTHENWARE.** Vessels of this ware were in use among the most ancient nations. Various domestic articles were made by the Romans, 715 B. C. The art was revived and improved in Italy, A. D. 1310. Wedgewood's patent ware was first made in 1762. His pottery in Staffordshire was extended to a variety of curious compositions, subservient not only to the ordinary purposes of life, but to the arts, antiquity, history, &c., and thereby rendered a very important branch of commerce, both foreign and domestic. See *China*.—*Porcelain*.

**EARTHQUAKES.** The theory of earthquakes has not yet been formed with any degree of certainty. Anaxagoras supposed that earthquakes were produced by subterraneous clouds bursting out into lightning, which shook the vaults that confined them, B. C. 435.—*Diog. Laert.* Kircher, Des Cartes, and others, supposed that there were many vast cavities under ground which have a communication with each other, some of which abound with waters, others with exhalations, arising from inflammable substances, as nitre, bitumen, sulphur, &c. These opinions continued to be supported till 1749-50, when an earthquake was felt at London, and several parts of Britain. Dr. Stukeley, who had been engaged in electrical experiments, then began to suspect that a phenomenon of this kind ought to be attributed not to vapors or fermentations generated in the bowels of the earth, but to electricity. These principles at the same time were advanced by Signor Beccaria, without knowing any thing of Dr. Stukeley's discoveries, and the hypothesis has been confirmed by the experiments of Dr. Priestley. In many cases, however, it appears probable that the immense power of water converted into steam by subterraneous fires must contribute to augment the force which occasions earthquakes. Among those which are recorded as having been the most destructive and memorable, are the following, which are quoted from the best sources: it would be impossible to enumerate in this volume all that have occurred:—

|                                                                                                                                                                    |     |                                                                                                                                    |      |

Curtius, armed and mounted on a stately horse, leaped into the dreadful chasm it occasioned ( <i>Livy</i> ) - - - | 358 | In Asia, Pontus, and Macedonia, 150 cities and towns damaged. - -                                                                  | 357  |
| Duras, in Greece, buried with all its inhabitants; and twelve cities in Campania also buried - -                                                                   | 345 | Nicomedia again demolished, and its inhabitants buried in its ruins -                                                              | 358  |
| Lysimachia totally buried, with all its inhabitants - - -                                                                                                          | 283 | One felt by nearly the whole world -                                                                                               | 543  |
| Awful one in Asia, which overturned twelve cities - - - A. D.                                                                                                      | 17  | At Constantinople; its edifices destroyed, and thousands perished -                                                                | 553  |
| One accompanied by the eruption of Vesuvius; the cities of Pompeii and Herculaneum buried - - -                                                                    | 79  | In Africa; many cities overturned -                                                                                                | 560  |
| Four cities in Asia, two in Greece, and two in Galatia, overturned - -                                                                                             | 107 | Awful one in Syria, Palestine, and Asia; more than 500 cities were destroyed, and the loss of life surpassed all calculation - - - | 742  |
|                                                                                                                                                                    |     | In France, Germany, and Italy - -                                                                                                  | 801  |
|                                                                                                                                                                    |     | Constantinople overturned, and all Greece shaken - - -                                                                             | 936  |
|                                                                                                                                                                    |     | One felt throughout England - -                                                                                                    | 1089 |
|                                                                                                                                                                    |     | One at Antioch; many towns destroyed.                                                                                              |      |

EARTHQUAKES, *continued.*

ed: among them, Mariseum and Marmistria - A. D. 1114  
 Catania in Sicily overturned, and 15,000 persons buried in the ruins - 1137  
 One severely felt at Lincoln - 1142  
 At Calabria, when one of its cities and all its inhabitants were overwhelmed in the Adriatic Sea - 1186  
 One again felt throughout England - 1274  
 At Naples, when 40,000 of its inhabitants perished - 1456  
 One felt in London: part of St. Paul's and the Temple churches fell - 1530  
 In Japan, several cities made ruins, and thousands perished - 1596  
 Awful one at Calabria - 1638  
 One in China, when 300,000 persons were buried in Pekin alone - 1662  
 One severely felt in Ireland - 1690  
 One at Jamaica, which totally destroyed Port Royal, whose houses were ingulfed forty fathoms deep, and 300 persons perished - 1692  
 One in Sicily, which overturned 54 cities and towns, and 300 villages. Of Catania and its 18,000 inhabitants, not a trace remained; more than 100,000 lives were lost - 1693  
 Palermo nearly destroyed, and 6000 persons perished - 1726  
 Again in China; and 100,000 people swallowed up at Pekin - 1731  
 One in Hungary, which turned a mountain round - 1736  
 Lima and Callao demolished: 18,000 persons buried in the ruins Oct. 28, 1746  
 One at Palermo, which swallowed up a convent; but the monks escaped 1740  
 In London, the inhabitants terrified by a slight shock Feb. 8, 1750  
 Another, but severer shock, March 8, 1750  
 Adrianople nearly overwhelmed - 1752  
 At Grand Cairo, half of the houses, and 40,000 persons swallowed up - 1754  
 Quito destroyed - April, 1755  
 Great earthquake at Lisbon. In about eight minutes most of the houses, and upwards of 50,000 inhabitants, were swallowed up, and whole streets buried. The cities of Coimbra, Oporto, and Braga, suffered dreadfully, and St. Ubes was wholly overturned. In Spain, a large part of Malaga became ruins. One half of Fez, in Morocco, was destroyed, and more than 12,000 Arabs perished there. Above half of the island of Madeira became waste; and 2,000 houses in the island of Meteline, in the Archipelago, were overthrown: this awful earthquake extended 5000 miles, even to Scotland Nov. 1, 1755  
 One in Syria extended over 10,000 square miles: Balbec destroyed - 1759  
 One at Martinico, when 1600 persons lost their lives - Aug. 1767  
 At Guatemala, which, with 80,000 inhabitants, was swallowed up Dec. 1773

A destructive one at Smyrna - A. D. 1778  
 At Tauris: 15,000 houses thrown down, and multitudes buried - 1780  
 One which overthrew Messina and a number of towns in Italy and Sicily: 40,000 persons perished - 1783  
 Archindschan wholly destroyed, and 12,000 persons buried in its ruins - 1784  
 At Borgo di San Sepolcro, an opening of the earth swallowed up many houses and 1000 persons - Sept. 1789  
 Another fatal one in Sicily - 1791  
 One in Naples, when Vesuvius issuing forth its flames overwhelmed the city of Torre del Greco - 1794  
 In Turkey, where, in three towns, 10,000 persons lost their lives - 1794  
 The whole country between Santa Fe and Panama destroyed, including the cities of Cusco and Quito, 40,000 of whose people were, in one second, hurled into eternity - 1795  
 One at Constantinople, which destroyed the royal palace and an immensity of buildings, and extended into Romania and Wallachia. - 1800  
 A violent one felt in Holland - Jan. 1804  
 In the kingdom of Naples, where 20,000 persons lost their lives - 1805  
 At the Azores: a village of St. Michael's sunk, and a lake of boiling water appeared in its place - Aug. 1810  
 Awful one at Caraccas (*which see*) - 1812  
 Several felt throughout India. The district of Kutch sunk; 2000 persons were buried with it - June 1819  
 In Genoa, Palermo, Rome, and many other towns; great damage sustained, and thousands perished - 1819  
 One fatal, at Messina - Oct. 1826  
 One in Spain, which devastated Murcia, and numerous villages; 6000 persons perished - March 21, 1829  
 In the duchy of Parma; no less than 40 shocks were experienced at Borgotaro; and at Pontremoli many houses were thrown down, and not a chimney was left standing Feb. 14, 1834  
 In many cities of Southern Syria, by which hundreds of houses were thrown down, and thousands of the inhabitants perished Jan. 22, 1837  
 At Martinique, by which nearly half of Port Royal is destroyed, nearly 700 persons killed, and the whole island damaged - Jan. 11, 1839  
 At Ternate: the island made a waste, almost every house destroyed, and thousands of the inhabitants lose their lives - Feb. 14, 1840  
 Awful and destructive earthquake at Mount Ararat; in one of the districts of Armenia 3137 houses were overthrown, and several hundred persons perished - July 2, 1840  
 Great earthquake at Zante, where many persons perished Oct. 30, 1840

**EASTER** So called in England from the Saxon goddess *Eostre*. The festival of Easter was instituted about A. D. 68; the day for the observance of it was fixed in England by St. Austin, in 597. It was ordained by the council

of Nice to be observed on the same day throughout the whole Christian world. Easter is the first Sunday after the first full moon that occurs after the 21st of March.

**EASTERN EMPIRE.** Commenced under Valens, A. D. 364, and ended in the defeat and death of Constantine XIII., the last Christian emperor, in 1453. Mahomet II. resolved to dethrone him, and possess himself of Constantinople; he laid siege to that city both by sea and land, and took it by assault after it had held out fifty-eight days. The unfortunate emperor, seeing the Turks enter by the breaches, threw himself into the midst of the enemy, and was cut to pieces; the children of the Imperial house were massacred by the soldiers, and the women reserved to gratify the lust of the conqueror; and thus terminated the dynasty of the Constantines, and commenced the present empire of Turkey, May 29, 1453. See *Tabular Views*, in this vol. from page 61. See also *Turkey*.

**ECCLESIASTICAL COURTS.** There existed no distinction between lay and ecclesiastical courts in England until after the Norman conquest, A. D. 1066. The following are the causes cognizable in ecclesiastical courts: blasphemy, apostasy from Christianity, heresy, schism, ordinations, institutions to benefices, matrimony, divorces, bastardy, tithes, incests, fornication, adultery, probate of wills, administrations, &c.—*Blackstone*.

**ECCLESIASTICAL STATE OR STATES OF THE CHURCH.** See *Rome*. In A. D. 1798, this state was taken possession of by the French, who erected it into the "Roman Republic." They obliged the pope, Pius VI., to remove into Tuscany, and afterwards into France, where he died in 1799. In the same year a conclave was permitted to be held at Venice; and, in 1800, cardinal Chiaramonti, who was elected to the papal chair, took the title of Pius VII., and resumed the dominion of the Ecclesiastical State. This power was held until 1809, when he was deprived by Bonaparte of his temporal sovereignty, and reduced to the condition of bishop of Rome; but in 1814 the pope was restored. For succession of popes, see p. 50 *et seq.*

**ECLECTICS.** Ancient philosophers, also called *Analogetici*, and *Philalethes*, or the lovers of truth. Without attaching themselves to any sect, they chose what they judged good from each: founded by Polemon of Alexandria, about A. D. 1.—*Dryden*. Also a sect, so called in the Christian church, who considered the doctrine of Plato conformable to the spirit of the doctrine of the Christian.

**ECLIPSES.** The theory of eclipses was known to the Chinese at least 120 B. C.—*Gaubil*. An eclipse was supposed by most of the eastern nations to be the effect of magic; hence the custom among them of drumming during its continuance. The first eclipse recorded, happened March 19, 721 B. C. at 8' 40" P. M. according to Ptolemy; it was lunar, and was observed with accuracy at Babylon.—See *Astronomy*. The following were extraordinary eclipses of the sun and moon:—

| OF THE SUN.                                                             |          |      |                                                                                                                                                      |                |
|-------------------------------------------------------------------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| That predicted by Thales; observed at Sardis ( <i>Pliny</i> , lib. ii.) | B. C.    | 585  | In England, where it occasioned a total darkness ( <i>Wm. Malmsh.</i> )                                                                              | 1140           |
| One at Athens ( <i>Thucydides</i> , lib. iv.)                           |          | 424  | Again; the stars visible at ten in the morning ( <i>Camden</i> )                                                                                     | June 23, 1191  |
| Total one; three days' supplication decreed at Rome ( <i>Livy</i> )     |          | 188  | The true sun, and the appearance of another, so that astronomers alone could distinguish the difference by their glasses ( <i>Comp. Hist. Eng.</i> ) | 1191           |
| One general at the death of Jesus Christ ( <i>Josephus</i> )            | A. D.    | 33   | Again; total darkness ensued ( <i>idem</i> )                                                                                                         | 1331           |
| One at Rome, causing a total darkness at noon-day ( <i>Livy</i> )       |          | 291  | A total one; the darkness so great that the stars shone, and the birds went to roost at noon ( <i>Oldmixon's Annals of Geo. I.</i> )                 | April 22, 1715 |
| One observed at Constantinople                                          |          | 968  |                                                                                                                                                      |                |
| In France, when it was dark at noon-day ( <i>Du Fresnoy</i> )           | June 29, | 1033 |                                                                                                                                                      |                |

ECLIPSES, *continued.*

|                                                                                             |                                                                                        |
|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| Remarkable one, central and annular<br>in the interior of Europe - Sept. 7, 1820            | Again, in Asia Minor ( <i>Polybius</i> ) - 219                                         |
| OF THE MOON.                                                                                | One at Rome, predicted by Q. Sulpitius                                                 |
| The first, observed by the Chaldeans at<br>Babylon ( <i>Ptolemy, lib. iv.</i> ) - B. C. 721 | Gallus ( <i>Livy, lib. xlii.</i> ) - 168                                               |
| A total one, observed at Sardis ( <i>Thucydides, lib. vii.</i> ) - - - 413                  | One terrified the Roman troops and<br>quelled their revolt ( <i>Tacitus</i> ) A. D. 14 |

The revolution of eclipses was first calculated by Calippus, the Athenian, 336 B. C. The Egyptians say they had accurately observed 373 eclipses of the sun, and 832 of the moon, up to the period from Vulcan to Alexander, who died 323 B. C.

**EDEN, GARDEN OF.** The question about the site of Eden has greatly agitated theologians; some place it near Damascus, others in Armenia, some in Caucasus, others at Hillah, near Babylon, others in Arabia, and some in Abyssinia. The Hindoos refer it to Ceylon: and a learned Swede asserts that it was in Sudermania! Several authorities concur in placing it in a peninsula formed by the main river of Eden, on the east side of it, below the confluence of the lesser rivers, which emptied themselves into it, about 27° N. lat., now swallowed up by the Persian Gulf, an event which may have happened at the Universal Deluge, 2348 B. C. The country of Eden extended into Armenia.—*Calmét*. The Almighty constructed Eden with a view to beauty, as well as usefulness; not only every plant there was good for food, but such also as were pleasant to the eye, were planted there.—*Genesis* ii. 8, 9.

**EDGEHILL, BATTLE OF,** also called Edgehill Fight, between the Royalists and the Parliament army, the first engagement of importance in the civil war; Charles I. was personally present in this battle. Prince Rupert commanded the royalists, and the earl of Essex the parliamentarians. Oct. 23, 1642.

**EDICT OF NANTES.** This was the celebrated edict by which Henry IV. of France granted toleration to his Protestant subjects, in 1598. It was revoked by Louis XIV., Oct. 24, 1685. This bad and unjust policy lost to France 800,000 Protestants, and gave to England (part of these) 50,000 industrious artisans. Some thousands, who brought with them the art of manufacturing silks, settled in Spitalfields, where their descendants yet remain: others planted themselves in Soho and St. Giles's, and pursued the art of making crystal glasses, and various fine works in which they excelled; among these, jewelry, then little understood in England.—*Anderson's Orig. of English Commerce*.

**EDILES.** These were Roman magistrates, like our mayors, and there were two ediles at a time. They had the superintendence and care of public and private works and buildings, baths, aqueducts, bridges, roads, &c.; they also took cognizance of weights and measures, and regulated the markets for provisions; they examined comedies before they were acted, and treated the people with games and shows at their own expense. The duties of ediles have suggested similar offices in our own polity, and served in many instances as models for our magistracy.—*Pardon*.

**EDINBURGH.** The metropolis of Scotland, and one of the first and finest cities of the empire. It derives its name—in ancient records, *Dun Edin*, signifying the "hill of Edin"—from its castle, founded or rebuilt by Edwin, king of Northumbria, who, having greatly extended his dominions, erected it for the protection of his newly-acquired territories from the incursions of the Scots and Picts, A. D. 626. But it is said the castle was first built by Camelon, king of the Picts, 330 B. C. It makes a conspicuous appearance, standing at the west end of the town, on a rock 300 feet high, and before the use of great guns, was a fortification of considerable strength.

**EDUCATION IN U. S.** See *Colleges and Schools*. American Institute of Instruction organized at Boston, Aug. 19, 1830. Literary Convention at New York, Oct. 20, 1830.

**EDUCATION IN ENGLAND.** A grant of 30,000*l.* for national education, proposed in parliament by Lord John Russell and passed, 275 to 273, July 9, and the House of Lords went in a body to ask the Queen to rescind the grant, July 11, 1839.

**EGALITÉ.** *Equality.* The surname assumed by Philip Bourbon Capet, the infamous duke of Orleans, to ingratiate himself with the republicans, on the abolition of monarchy in France, Sept. 11, 1792. He voted for the death of Louis XVI. his relative; but this did not save him from a like doom. He was guillotined Nov. 6, 1793.

**EGYPT.** The dynasty of its Pharaohs or kings commenced with Mizraim, the son of Ham, second son of Noah, 2188 B. C. The kingdom lasted 1663 years; it was conquered by Cambyzes, 525 B. C. In A. D. 639, this country was wrested from the eastern emperor Heraclius, by Omar, calif of the Saracens. The famous Saladin established the dominion of the Mamelukes, in 1171. Selim I., emperor of the Turks, took Egypt in 1517, and it was governed by Beys till 1799, when a great part of the country was conquered by the French, under Bonaparte. In 1801, the invaders were dispossessed by the British, and the government was restored to the Turks.—See *Turkey*, for modern events. See Tabular Views, in this vol. page 5 *et seq.*

| Mizraim builds Memphis ( <i>Blair</i> ) B. C.                                                                                                                         | 2188 | country, hitherto called Mizraim, is now called Egypt ( <i>Blair</i> ) - B. C.                                                                                      | 1485 |
| Egypt made four kingdoms, viz.: Upper Egypt, Lower Egypt, This, and Memphis ( <i>Abbe Lenglet, Blair</i> )                                                            | 2126 | Reign of Thuois (the Proteus of the Greeks) who had the faculty of assuming whatever form he pleased, as of a lion, a dragon, a tree, water, fire                   | 1189 |
| Athotes invents hieroglyphics -                                                                                                                                       | 2122 | [These fictions were probably intended to mark the profound policy of this king, who was eminent for his wisdom, by which his dominion flourished.— <i>Blair</i> .] |      |
| Busris builds Thebes ( <i>Usher</i> )                                                                                                                                 | 2111 | Pseusennes enters Palestine, ravages Judea, and carries off the sacred vessels of the Temple -                                                                      | 971  |
| Osymandias, the first warlike king, passes into Asia, conquers Bactria, and causes his exploits to be represented in sculpture and painting ( <i>Usher, Lenglet</i> ) | 2100 | The dynasty of kings called <i>Tanites</i> begins with Petubastes ( <i>Blair</i> )                                                                                  | 825  |
| The Phœnicians invade Lower Egypt and hold it 260 years ( <i>Usher</i> )                                                                                              | 2080 | The dynasty of <i>Saites</i> ( <i>Blair</i> )                                                                                                                       | 781  |
| The lake of Mæris constructed -                                                                                                                                       | 1938 | Sebacon invades Egypt, subdues the king, Bocchoris, whom he orders to be roasted alive ( <i>Usher</i> )                                                             | 735  |
| The patriarch Abraham visits Egypt to avoid the famine in Canaan -                                                                                                    | 1921 | Psammetichus the Powerful reigns -                                                                                                                                  | 660  |
| Syphoas introduces the use of the common letters ( <i>Usher</i> )                                                                                                     | 1891 | He invests Azoth, which holds out for 19 years, the longest siege in the annals of antiquity ( <i>Usher</i> )                                                       | 647  |
| Memnon invents the Egyptian letters ( <i>Blair, Lenglet</i> )                                                                                                         | 1822 | Necho begins the famous canal between the Arabic gulf and the Mediterranean sea ( <i>Blair</i> )                                                                    | 610  |
| Amenophis I. is acknowledged the king of all Egypt ( <i>Lenglet</i> )                                                                                                 | 1821 | This canal abandoned, after costing the lives of 120,000 men ( <i>Herodotus</i> )                                                                                   | 609  |
| Joseph the Israelite is sold into Egypt as a slave ( <i>Lenglet</i> )                                                                                                 | 1728 | Nebuchadnezzar of Babylon deposes Apries ( <i>Usher</i> )                                                                                                           | 563  |
| He interprets the king's dreams -                                                                                                                                     | 1715 | Apries taken prisoner and strangled in his palace ( <i>Diad. Siculus</i> )                                                                                          | 571  |
| His father and brethren settle here -                                                                                                                                 | 1706 | The philosopher Pythagoras comes from Samos into Egypt, and is instructed in the mysteries of Egyptian theology ( <i>Usher</i> )                                    | 555  |
| Sesostris reigns; he extends his dominion by conquest over Arabia, Persia, India, and Asia Minor ( <i>Lenglet</i> )                                                   | 1618 |                                                                                                                                                                     |      |
| Settlement of the Ethiopians ( <i>Blair</i> )                                                                                                                         | 1615 |                                                                                                                                                                     |      |
| Rampses, who imposed on his subjects the building of walls and pyramids, and other labors, dies ( <i>Lenglet</i> )                                                    | 1492 |                                                                                                                                                                     |      |
| Amenophis I. is overwhelmed in the Red Sea, with all his army ( <i>Lenglet, Blair</i> )                                                                               | 1492 |                                                                                                                                                                     |      |
| Reign of Egyptus, from whom the                                                                                                                                       |      |                                                                                                                                                                     |      |

\* The epoch of the reign of Sesostris is very uncertain; Blair makes it to fall 133 years later. As to the achievements of this monarch, they are supposed to have been the labors of several kings, attributed by the Egyptian priests to Sesostris alone, whose very existence, indeed, is doubted.

EGYPT, *continued.*

|                                                                                                                                                                                                            |     |                                                                                                                                                                      |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| The line of the Pharaohs ends in the murder of Psammenitus by Camby-<br>ses ( <i>Blair</i> ) - B. C.                                                                                                       | 526 | His subjects, wearied with his cruel-<br>ties and crimes, demolish his stat-<br>ues, set fire to his palace, and he<br>dies from their fury ( <i>Blair</i> ) - B. C. | 129 |
| Dreadful excesses of Cambyses; he<br>puts the children of the grandes,<br>male and female, to death, and makes<br>the country a waste ( <i>Herodotus</i> ) -                                               | 524 | He murders his son by his new queen;<br>also his son by her mother, sending<br>the head and limbs of the latter as a<br>present to the parent on a feast day         | 129 |
| He sends an army of 50,000 men across<br>the desert to destroy the temple of<br>Jupiter Ammon, but they all perish<br>in the burning sands ( <i>Justin</i> ) -                                             | 524 | Yet, defeating the Egyptian army, he<br>recovers his throne; and dies -                                                                                              | 128 |
| Egypt revolts from the Persians; again<br>subdued by Xerxes ( <i>Blair</i> ) -                                                                                                                             | 487 | Pestilence from the putrefaction of<br>vast swarms of locusts; 800,000 per-<br>sons perish in Egypt -                                                                | 128 |
| A revolt under Inarus ( <i>Blair</i> ) -                                                                                                                                                                   | 463 | Revolt in Upper Egypt; the famous<br>city of Thebes destroyed after a siege<br>of three years ( <i>Diod. Siculus</i> ) -                                             | 82  |
| Successful revolt under Amyrtæus,<br>who is proclaimed king ( <i>Lenglet</i> ) -                                                                                                                           | 414 | Auletes dying, leaves his kingdom to<br>his eldest son, Ptolemy, and the fa-<br>mous Cleopatra ( <i>Blair</i> ) -                                                    | 31  |
| Egypt again reduced by Persia, and its<br>temples pillaged ( <i>Usher</i> ) -                                                                                                                              | 350 | During a civil war between Ptolemy<br>and Cleopatra, Alexandria is be-<br>sieged by Cæsar, and the famous<br>library nearly destroyed by fire<br>( <i>Blair</i> ) -  | 47  |
| Alexander the Great enters Egypt,<br>wrests it from the Persians, and<br>builds Alexandria ( <i>Blair</i> ) -                                                                                              | 332 | Cæsar defeats the king, who, in cross-<br>ing the Nile, is drowned; and the<br>younger Ptolemy and Cleopatra<br>reign -                                              | 46  |
| Philadelphus completes the Pharos of<br>Alexandria ( <i>Blair</i> ) -                                                                                                                                      | 283 | Cleopatra poisons her brother (only 14<br>years of age) and reigns alone -                                                                                           | 43  |
| The Septuagint version of the Old Tes-<br>tament made about this time -                                                                                                                                    | 283 | She appears before Mark Antony, to<br>answer for this crime. Fascinated<br>by her beauty, he follows her into<br>Egypt -                                             | 40  |
| The famous library of Alexandria also<br>dates about this period ( <i>Blair</i> ) -                                                                                                                        | 283 | Antony defeated by Octavius Cæsar<br>at the battle of Actium ( <i>Blair</i> ) -                                                                                      | 31  |
| Ambassadors first sent to Rome -                                                                                                                                                                           | 269 | Octavius enters Egypt; Antony and<br>Cleopatra kill themselves; and the<br>kingdom becomes a Roman prov-<br>ince -                                                   | 30  |
| Ptolemy Evergetes overruns Syria,<br>and returns laden with rich spoils,<br>and 2500 statues and vessels of gold<br>and silver, which Cambyes had<br>taken from the Egyptian temples<br>( <i>Blair</i> ) - | 246 |                                                                                                                                                                      |     |
| Reign of Philometer and Physcon -                                                                                                                                                                          | 151 |                                                                                                                                                                      |     |
| At the death of Philometer, his brother<br>Physcon marries his queen, and on<br>the day of his nuptials murders the<br>infant son of Philometer in its moth-<br>er's arms -                                | 145 |                                                                                                                                                                      |     |
| He repudiates his wife, and marries<br>her daughter by his brother ( <i>Blair</i> ) -                                                                                                                      | 130 |                                                                                                                                                                      |     |

**ELECTORS.** Those for members of parliament for counties were obliged to have forty shillings a year in land, 39 Henry VI., 1460.—*Ruffhead's Statutes.* Among the recent acts relating to elections are the following: act depriving excise and custom-house officers, and contractors with government, of their votes, 1782. In the U. S., the qualifications vary in the different states.

**ELECTORS OF GERMANY.** Originally, all the members of the Germanic body made choice of their head; but amidst the violence and anarchy which prevailed for several centuries in the empire, seven princes who possessed the greatest power assumed the exclusive privilege of nominating the emperor.—*Dr. Robertson.* An eighth elector was made, in 1648; and a ninth in favor of the duke of Hanover, in 1692. The number was reduced to eight, in 1777; and was increased to ten at the peace of Lunéville, in 1801. The electorship ceased on the dissolution of the German empire, and when the crown of Austria was made hereditary, 1804, 1806.—See *Germany.*

**ELECTRICITY.** That of amber was known to Thales, 600 B. C. Electricity was imperfectly discovered A. D. 1467. It was found in various substances by Dr. Gilbert, of Colchester, in 1600; he first obtained the knowledge of its power, of conductors and non-conductors, in 1606. Ottoguerick found that two globes of brimstone contained electric matter, 1647. The electric shock was discovered at Leyden, 1745, and hence the operation is termed the "Leyden phial." Electric matter was first found to contain caloric, or fire, and that it would fire spirits, 1756. The identity of electricity and lightning
